the pronator and flexor muscles and the supinator longus. **S. antibra'chii ulna'ris**, similar groove on internal side of a muscular forearm, showing interval between flexor sublimis digitorum and flexor ulnaris. **S. aor'ticus**, impression of aorta on surface of left lung. **S. ad aquæduc'tum vestib'uli**, fossula sulciformis; see *Crista vestibuli*. **S. arcua'tus præcu'nei**, groove on middle surface of hemispheres between superior parietal convolution and posterior extremity of gyrus cinguli. **S. arte'riæ occipita'lis**, occipital groove. **S. arte'riæ subcla'viæ**, subclavian groove or sulcus subclaviæ. **S. atrioventricula'ris cor'dis**, sulcus between auricle and ventricle. **S. au'ris ante'rior**, sulcus in outer ear between helix and tragus; incisura auris. **S. au'ris poste'rior**, slight depression in outer ear at junction of antihelix and antitragus. **S. basila'ris**, basilar groove. **S. bicipita'lis bra'chii**, bicipital groove. **S. bicipita'lis exter'nus**, external bicipital groove. **S. bicipita'lis inter'nus**, internal bicipital groove. **S. calca'nei**, interarticular groove. **S. calcari'nus**, calcarine sulcus. **S. callosomargina'lis**, callosomarginal sulcus. **S. callo'sus**, sulcus between corpus callosum and gyrus cinguli. **S. carot'icus**, carotid groove. **S. carotide'us**, sulcus anterior to sternomastoid muscle, under which is the carotid artery. **S. centra'lis**, central sulcus. **S. centra'lis modi'oli**, central canal of modiolus of cochlea, continued as a slight groove on the lamina of the modiolus. **S. cerebel'li supe'rior ante'rior**, sulcus between anterior and median lobes of superior portions of cerebellum. **S. chias'matis**, optic groove. **S. choroï'deus**, choroid sulcus. **S. cin'guli**, groove between the corpus callosum and the gyrus cinguli. **S. circula'ris cor'dis**, auriculo-ventricular groove. **S. circula'ris Rei'lii**, S. between island of Reil and adjacent lobes. **S. cœ'cus**, deep sulcus between olivary body and posterior border of pons Varolii. **S. collatera'lis ante'rior medul'læ spina'lis**, anterolateral groove. **S. collatera'lis cer'ebri**, occipitotemporal sulcus. **S. collatera'lis infe'rior**, groove between the two portions of digastric lobe. **S. collatera'lis poste'rior**, posterolateral groove. **S. collatera'lis postre'mus**, paramedian sulcus. **S. condyloï'deus**, slight sulcus between condyle of occipital bone and jugular notch. **S. corona'lis cor'dis** or **corona'rius**, auriculo-ventricular furrow. **S. cor'porum quadrigemino'rum**, median sulcus between the separating corpora quadrigemina. **S. cor'porum quadrigemino'rum transver'sus**, transverse groove or sulcus between anterior and posterior corpora quadrigemina. **S. of cor'pus callo'sum**, defined sulcus on middle surface of the hemispheres, between corpus callosum and gyrus fornicatus. **S. crucia'tus** or **crucifor'mis**, triradiate sulcus. **S. cru'ris hel'icis**, sulcus in middle surface of external ear. **S. deltoïdeopectora'lis**, slight groove on skin showing space between deltoid and pectoralis major muscles. **S. denta'tus**, sulcus hippocampi. **S. digita'lis poste'rior**, groove caused by flexion of fingers, from radial to ulnar border of the hand, showing where the deep palmar arch crosses the third metacarpal bone. **S. digita'tus**, groove on floor of descending cornu of lateral ventricle of brain, between the collateral eminence and hippocampus major. **S. digita'tus ante'rior**, groove for flexion of three outer fingers, on palm of hand, from root of index finger outward to ulnar portion. **S. ethmoïda'lis**, sulcus for nasal nerve on posterior surface of nasal bone. **S. extre'mus**, vertical groove on middle surface of hemispheres near occipital end of calcarine fissure. **S. floc'culi**, sulcus of flocculus. **S. fornica'tus infe'rior**, sulcus cinguli and S. hippocampi united. **S. fornica'tus supe'rior**, callosomarginal sulcus. **S. fronta'lis**, frontal sulcus on cerebral surface of temporal lobe. **S. frontolatera'lis**, frontolateral sulcus. **S. frontomargina'lis**, frontomarginal sulcus. **S. frontoparieta'lis inter'nus**, callosomarginal sulcus. **S. grac'ilis**, sulcus between the slender lobe and part of posterior lobe of cerebellum. **R. grac'ilis cerebel'li**, sulcus inferior posterior; see *Sulci of cerebellum*. **S. ham'uli pterygoï'dei**, hamular groove. **S. hippocam'pi**, sulcus between hippocampal gyrus and fascia dentata. **S. horizonta'lis tib'iæ**, sulcus on the head of the tibia for insertion of semimembranosus muscle. **S. ili'acus**, iliac groove. **S. infe'rior ante'rior**, groove between flocculus and digastric lobe and amygdala. **S. infe'rior latera'lis**, groove between posterior and inferior lobes of cerebellum. **S. infe'rior media'lis**, groove between digastric lobe of cerebellum and amygdala. **S. infrainsula'ris**, groove between island of Reil and temporosphenoidal bone. **S. infrana'tes**, gluteal fold. **S. infraorbita'lis**, infraorbital groove. **S. infrapalpebra'lis**, oculozygomatic line. **S. inguina'lis**, inguinal furrow. **S. interarticula'ris calca'nei accesso'rius** or **ta'li accesso'rius**, groove between the median articular facet of the calcaneum and astragalus. **S. interbrachia'lis**, groove between anterior and posterior brachia of the corpora quadrigemina. **S. interhel'icem et anthel'icem**, navicular fossa. **S. interinsula'ris**, median sulcus seen in the island of Reil. **S. interme'dius**, intermediate groove. **S. interme'dius poste'rior** or **interme'dius posti'cus**, paramedian sulcus. **S. intertubercula'ris**, bicipital groove. **S. intraparieta'lis**, intraparietal sulcus. **S. Jacobson'ii**, sulcus for tympanic nerve on promontory of middle ear. **S. jugula'ris**, sulcus for lateral sinus on internal portion of jugular notch, on the cerebral surface of the occipital bone. **S. la'bii superio'ris**, lacuna labii superioris. **S. lacryma'lis**, lacrymal groove on external wall of inferior nasal meatus. **S., laryngopharynge'al**, pyramidal sinus. **S., lat'eral pharynge'al**, pyramidal sinus. **S., lat'eral poste'rior, of the spi'nal mar'row**, corresponds with the attachment of posterior roots of the spinal nerves. **S. latera'lis**, sulcus for lateral sinus along transverse ridge on inner surface of occipital bone. **S. latera'lis ante'rior**, anterolateral groove; mere trace on spinal marrow, marked only by attachment of filaments of anterior roots of spinal nerves. **S. latera'lis dorsa'lis**, posterolateral sulcus of spinal cord and medulla oblongata. **S. latera'lis medul'læ spina'lis**, see *Groove, anterolateral* and *posterolateral*. **S. latera'lis mesenceph'ali**, see *Peduncular sulci*. **S. latera'lis poste'rior**, posterolateral groove. **S. latera'lis postre'mus**, paramedian sulcus. **S. latera'lis ventra'lis**, antero-lateral groove of spinal cord and medulla oblongata. **S. ligamen'ti spira'lis**, external spiral groove. **S. lo'bi olfacto'rii**, olfactory sulcus. **S. longitudina'lis**, groove for longitudinal sinus on internal surface of occipital, parietal, and frontal bones. **S. longitudina'lis cor'dis**, crena cordis. **S. longitudina'lis infe'rior**, inferior vermiform groove of the cerebellum. **S. longitudina'lis supe'rior**, superior vermiform groove of cerebellum. **S. mag'nus cerebel'li** or **mag'nus horizonta'lis**, great horizontal fissure; see *Sulci of cerebellum*. **S. malleola'ris** or **malle'oli**, slight sulcus for long process of malleus on tympanic portion of temporal bone. **S. malleola'ris exter'nus** or **latera'lis**, sulcus for peroneal tendons back of external malleolus. **S. malleola'ris inter'nus** or **media'lis**, sulcus for tendon of tibialis posticus back of internal malleolus. **S. media'lis frontoparieta'lis**, callosomarginal sulcus. **S. media'nus**, narrow groove on median line of lower jaw. **S. media'nus fos'sæ rhomboï'deæ** or **media'nus si'nus rhomboida'lis**, longitudinal groove of fourth ventricle. **S. me'dius substan'tiæ perfora'tæ anterio'ris**, slight groove between anterior perforated space and rostrum of corpus callosum. **S. medul'læ oblonga'tæ**, basilar groove of occipital bone. **S. meninge'us**, meningeal groove. **S. menta'lis** or **mentolabia'lis**, mentolabial furrow. **S. of Monro'**, shallow groove on side of third ventricle of brain, between anterior opening of aqueduct of Sylvius and foramen of Monro, separating optic thalamus from infundibulum. **S. muscula'ris flexo'ris lon'gi hallu'cis**, incisura calcanei. **S. muscula'ris tym'pani**, canal of the tensor tympani. **S. mus'culi perone'i lon'gi**, peroneal groove. **S. musculo'sus**, canal of the tensor tympani. **S. mylohyoï'deus of**

lower jaw, mylohyoid groove. **S. nasolabia'lis,** nasal line; naso-labial line. **S. nasopalati'nus,** nasopalatine groove. **S. navicula'ris,** groove on anterior part of scaphoid bone of wrist; navicular fossa. **S. obturato'rius,** obturator groove. **S. occipita'lis ante'rior,** anterior occipital sulcus. **S. occipita'lis infe'rior** or **occipita'lis latera'lis** or **occipita'lis longitudina'lis infe'rior,** inferior occipital sulcus. **S. occipita'lis me'dius,** middle occipital sulcus. **S. occipita'lis transver'sus,** transverse occipital sulcus. **S. occipitotempora'lis** or **occipitotempora'lis infe'rior** or **occipitotempora'lis inter'nus,** collateral fissure. **S. oculomoto'rii,** medial sulcus of the peduncle. **S. olfacto'rius,** olfactory sulcus. **S. oli'væ,** olivary sulcus. **S. op'ticus,** optic groove. **S. orbita'lis,** triradiate sulcus. **S. orbita'lis intermedia'lis,** intermediate orbital sulcus. **S. orbita'lis latera'lis,** lateral orbital sulcus. **S. orbita'lis media'lis,** olfactory sulcus. **S. orbitopalpebra'lis infe'rior** and **supe'rior,** grooves between the eyelids and orbit at the borders. **S. os'sis carpa'lis pri'mi,** groove for flexor carpi radialis on palmar surface of trapezium. **S. os'sis cuboï'dei,** peroneal groove. **S. os'sis multan'guli,** groove for flexor carpi radialis, on palmar surface of trapezium. **S. os'sis navicula'ris,** groove on tarsal navicular bone. **S. os'sis tarsa'lis quar'ti,** peroneal groove. **S. palati'nus media'nus,** sulcus in hard palate corresponding to median palatal suture. **S. palma'ris longitudina'lis,** line on palm of hand from middle of wrist to near space between third and fourth digits. **S. palpebromala'ris,** oculozygomatic line. **S. paracentra'lis,** paracentral sulcus. **S. paramedia'nus dorsa'lis,** paramedian sulcus. **S. parapyramida'lis,** parapyramidal sulcus. **S. parieta'lis,** intraparietal sulcus. **S. parietofronta'lis,** præcentral sulcus. **S. peduncula'ris,** great horizontal fissure of cerebellum; see *Sulci of cerebellum.* **S. pedun'culi latera'lis, S. pedun'culi media'lis,** see *Peduncular sulci.* **S. perone'i,** peroneal groove. **S. perpendicula'ris exter'nus,** superior occipital sulcus. **S. petrosquamo'sus,** petrosquamosal suture. **S. petro'sus infe'rior os'sis tem'porum,** inferior petrosal sulcus. **S. petro'sus supe'rior,** sulcus for superior petrosal sinus on upper edge of petrous portion of temporal bone. **S. pharynge'us latera'lis,** sinus pyriformis. **S. pinna'lis,** sulcus alaris. **S. pol'licis,** line on palm limiting the thenar eminence, indicating movements of flexion and opposition of thumb. **S. postcentra'lis,** postcentral sulcus. **S. postoliva'ris,** sulcus olivæ lateralis; see *Olivary sulci.* **S. præauricula'ris,** sulcus anterior to auricular surface of ilium, for anterior sacro-iliac ligament. **S. præcentra'lis,** præcentral sulcus. **S. præcentra'lis infe'rior,** portion of præcentral sulcus below the middle frontal convolution. **S. præcentra'lis supe'rior,** portion of the præcentral sulcus above the middle frontal convolution. **S. præcunea'tus,** transverse occipital sulcus. **S. præinsula'ris,** S. between island of Reil and frontal lobe. **S. præoccipita'lis,** anterior occipital sulcus. **S. prærolan'dicus,** præcentral sulcus. **S. præsyl'vius,** præsylvian sulcus. **S. pro tu'bâ Eustachia'nâ,** navicular fossa. **S. pterygoï'des,** pterygopalatine groove. **S. pterygopalati'nus,** pterygopalatine groove. **S. pulmona'lis,** pulmonary groove. **S. pylor'icus,** sulcus on outer surface of alimentary tube between the stomach and duodenum. **S. radia'lis hu'meri,** musculospiral groove. **S. ra'dioulna'ris,** upper line of carpal bones. **S. ra'mi auricula'ris va'gi,** auricular sulcus. **S. rec'tus,** olfactory sulcus. **S. retroglandula'ris,** cervix of the glans; see *Glans.* **S. Rolan'di,** fissure of Rolando. **S. Rolan'dicus ante'rior,** præcentral sulcus. **S. sagitta'lis,** sulcus longitudinalis. **S. scle'ræ,** depression on the eyeball at the junction of the cornea and sclerotica. **S. scle'ræ inter'nus,** sulcus formed by external wall of Schlemm's canal. **S. si'nus latera'lis,** fossa sigmoïdea. **S. si'nûs transver'si,** sigmoid fossa. **S. sphe'no-ethmoida'lis,** recessus spheno-ethmoidalis. **S. spira'lis,** musculospiral groove; sulcus or groove in the cochlea, separating the margin of the denticulate lamina from that to which the basilar membrane is attached. **S. sta'pedis,** groove on the concave surface of the stapes. **S. subcla'viæ** or **S. subcla'vius,** subclavian groove. **S. subparieta'lis,** subparietal sulcus. **S. subscapula'ris,** subscapular groove. **S. substan'tiæ perfora'tæ posterio'ris,** median groove on posterior perforated space. **S. supe'rior ante'rior,** groove between lobulus centralis and monticulus and anterior lobe of cerebellum. **S. supe'rior cerebel'li,** superior median groove of cerebellum. **S. supe'rior poste'rior,** groove between anterior and posterior lobes of cerebellum. **S. supracallo'sus,** callosomarginal sulcus. **S. supra-insula'ris,** groove between island of Reil and frontal and parietal lobes. **S. supra-orbita'lis,** supraorbital sulcus. **S. supra-orbita'lis transver'sus,** groove on orbital surface of frontal lobe of hemispheres. **S. ta'li,** interarticular groove. **S. tempora'lis interme'dius,** intermediate temporal sulcus. **S. trac'tûs olfacto'rii,** olfactory sulcus. **S. transversa'lis,** see *Liver.* **S. transver'sus,** furrow on the ampulla of a semicircular canal where the ampullar branch of the auditory nerve enters; sulcus lateralis of occipital bone. **S. triradia'tus,** triradiate sulcus. **S. tu'bæ Eustach'ii,** sulcus tubarius. **S. tuba'rius,** slight depression for cartilaginous part of Eustachian tube on petrous portion of temporal bone. **S. tympan'icus,** groove on concave surface of tympanic plate for attachment of membrana tympani. **S. ulna'ris,** ulnar groove. **S. umbilica'lis,** see *Liver.* **S. ve'næ cav'æ,** groove for vena cava on superior portion of right lung. **S. veno'sus,** furrow for a sinus of the dura mater on inner surface of bones of the skull. **S. vertebra'lis atlan'tis,** sulcus for vertebral and suboccipital nerve on superior surface of posterior arch of atlas. **S. vertebra'lis latera'lis atlan'tis,** sinus atlantis.

Sul'fis. Sulphite. **S. kal'icus,** potassium sulphite. **S. magne'sicus,** magnesium sulphite. **S. nat'ricus,** sodium sulphite. **S. potas'sicus,** potassium sulphite. **S. so'dicus,** sodium sulphite.

Sul'fur. Sulphur. **S. depura'tum,** washed sulphur. **S. joda'tum,** iodide of sulphur. **S. lo'tum,** washed sulphur. **S. præcipita'tum,** precipitated sulphur. **S. sublima'tum,** sublimed sulphur.

Sulfura'tum stib'icum lu'teum. Sulphurated antimony.

Sulfuratus, sul-fu-rat'us. Sulphurated; sulphureous.

Sulfure'tum. Sulphide. **S. carbon'icum,** carbon bisulphide. **S. hydrargyr'icum,** mercuric sulphide. **S. na'tricum** or **so'dicum,** sodium monosulphide. **S. stib'icum,** antimony sulphide. **S. stib'icum aura'tum,** antimony pentasulphide.

Sulphaldehyde, sulf-al'de-hide. Thialdehyde. Oil of offensive odor, produced by the action of sulphuretted hydrogen on ethylic aldehyde in aqueous solution. Hypnotic.

Sulphaminol, sulf-am'in-ol. Thiöxydiphenylamine. Yellow, odorless, tasteless powder. Antiseptic, resembling iodoform in its applications. In diseases of the nose, in wounds, ulcers, etc., it is employed externally, and internally in inflammation of the bladder. It is used as an application to lesions attended with offensive odor. With menthol, creasote, eucalyptol, and guaiacol it forms sulphaminol menthol, S. creasote, S. eucalyptol, and S. guaiacol, remedies employed in diseases of the nose and larynx.

Sul'phas. Sulphate. See *Sulphuric acid.* **S. alumina'ris,** alumen. **S. aluminicokal'icus,** alum. **S. aluminicokal'icus sicca'tus,** dried alum. **S. aluminicopotas'sicus,** alum. **S. ammoni'aci cupra'tus,** cuprum ammoniatum. **S. ammonicofer'ricus,** ammonioferric sulphate. **S. atrop'icus,** atropine sulphate. **S. cad'micus,** cadmii sulphas. **S. cal'cicus us'tus,** calcined gypsum. **S. chin'icus,** quinine sulphate. **S. cinchon'icus,** cinchonine sulphate. **S. cu'prico-ammoni'acus,** ammoniated copper. **S. cu'pricus,** copper sulphate. **S. hydrargyr'icus fla'vus,** basic mercuric sulphite. **S. kal'ico-alumin'icum,** alumen. **S. kal'ico-alumin'icum exsicca'tus,** dried alum. **S. kal'icus,** potassium sulphate. **S. magne'sicus,** magnesium sulphate. **S. mercu'ricus,** mercuric sulphate. **S. mor'phicus** or **mor-**

phi'næ or **morphi'ni**, morphine sulphate. **S. na'tricus**, sodium sulphate. **S. na'tricus sicca'tus**, dried sodium sulphate. **S. quin'icus** or **quini'næ**, quinine sulphate. **S. so'dicus**, sodium sulphate. **S. strych'nicus**, strychnine sulphate. **S. zin'cicum**, zinci sulphas.

Sulphate, sul'fate. Combination of sulphuric acid with base. **S. of alu'mina and potas'sa**, see *Alumen*. **S. of alu'minum and ammo'nium**, see *Alumen*. **S. of alu'minum and i'ron**, double salt employed as a styptic, astringent, and vermifuge; recommended in chronic diarrhœa and dysentery. **S. of cad'mium**, compound of sulphuric acid and cadmium; astringent and emetic. **S. of lead**, compound of sulphuric acid and lead. **S. of magne'sia**, see *Magnesii sulphas*. **S. of nick'el**, salt occurring in emerald-green crystals; largely used in nickel-plating; recommended as a tonic in cases of obstinate periodic headache. **S. of qui'nia** or **qui nine**, see *Quininæ sulphas*. **S. of stron'tia**, see *Strontium*.

Sulphethylic (sulf-eth-il'ik) **ac'id**. Sulphovinic acid.

Sul'phide. Combination of sulphur with another body. **S. of an'timony**, see *Stibnite*. **S. of car'bon**, bisulphide of carbon or carbonic bisulphidum. **S. of i'ron**, pyrites. **S. of mer'cury**, cinnabar. **S. of zinc**, blende.

Sul'phidum. Sulphide. **S. stib'icum**, antimony pentasulphide. **S. stib'icum nati'vum**, antimony sulphide.

Sulphindigotic (sulf-in-dig-ot'ik) **ac'id**. Resultant product of admixture of the solution of indigo in sulphuric acid.

Sulphion, sul'fe-on. Hypothetical body consisting of one equivalent of sulphur and four equivalents of oxygen; so called in reference to the binary theory of salts.

Sul'phis. Sulphite. **S. cal'cicus**, calcium sulphite. **S. magne'sicus**, magnesium sulphite. **S. na'tricus** or **so'dicus**, sodium sulphite.

Sulphite, sul'fite. Combination of sulphurous acid with a base. See *Sulphurous acid*.

Sulpho-azotized, sul'fo-az'o-tized. Containing sulphur and nitrogen.

Sulphobacteria, sul-fo-bak-te're-ah. Bacterial organism containing sulphur, growing in sulphuretted water.

Sulphocarbol, sul-fo-car'bol. Aseptol.

Sulphocarbolates, sul-fo-kar'bo-lates. *Sulphophenates*, *Phenylsulphates*. A class of salts prepared by heating together pure carbolic and sulphuric acids, diluting with water, and saturating with the base, as soda, zinc, etc. They are employed in diseases supposed to have a parasitic origin, as zymotic diseases, etc. Sulphocarbolates of magnesium, potassium, sodium, iron, copper, ammonium, lead, calcium, quinine, zinc, etc. have been prepared, and several of them employed therapeutically; zinc sulphocarbolates as an injection in gonorrhœa, vaginitis, etc., and a dressing to suppurating wounds, gr. v–f ℥j, and also internally in diarrhœa in the same doses as the sulphate. Lead sulphocarbolate has sometimes been used in phthisis and zymotic diseases in doses of ten to sixty grains, and in smaller doses, as well as externally, in children, in stomatitis, scarlatina with severe sore throat, thrush, etc. Calcium sulphocarbolate has been prescribed in doses of five grains to young rhachitic children.

Sulphocarbol'ic ac'id. *Sulphophenic acid*, *Phenylsulphuric acid*. A compound soluble crystalline acid resulting from the union of hydrated sulphuric acid and pure carbolic acid. Its odor is similar to that of carbolic acid, and its action as a disinfectant and antiseptic is considered by some to be more potent than carbolic acid alone. See *Sulphocarbolates*.

Sulphocarbonated, sul-fo-car'bo-na-ted. Containing sulphur and carbonic acid.

Sulpho-ichthyolic (sul-fo-ik-the-ol'ik) **ac'id**. Bibasic acid obtained by treating ichthyol with strong sulphuric acid and washing with strong solution of sodium chloride.

Sulphomethylic (sul-fo-meth-il'ik) **ac'id**. Acid produced by action of sulphuric acid upon methylic alcohol.

Sulphonal, sulf'o-nal. Prepared by mutual action of anhydrous mercaptan and anhydrous acetone. Occurs in heavy, prismatic, colorless crystals, soluble in 20 parts of cold water, more soluble in alcohol. Action hypnotic, producing natural sleep; neither depressing nor anæsthetic in character. Used in insomnia of the insane, delirium tremens, etc.

Sulphophenates, sul-fo-fe'nates. Salts formed by the combination of sulphuric and phenic acids with bases, as soda, etc. See *Sulphocarbolates*.

Sulphophenol, sul-fo-phe'nol. Aseptol.

Sulphopicric (sul-fo-pik'rik) **ac'id**. Add 4 cc. pure sulphuric acid to 200 cc. saturated solution of picric acid; after an hour filter, and dilute the filtrate with 600 cc. of distilled water.

Sulphoricinate, sul-fo-ris'in-ate. See *Sulphoricinic acid*.

Sulphoricinated, sul-fo-ris'in-a-ted. Prepared from sulphoricinic acid or sulphoricinates, as sulphoricinated creasote, S. salol, S. phenol, etc.

Sulphoricinic (sul-fo-ris'in-ik) **acid.** Derivative of oleum ricini or castor-oil, used topically in the form of sulphoricinate, as of sodium, in ozæna, tuberculosis of the larynx, diphtheria, etc.

Sulphosalicylic (sulf-o-sal-is-il'ik) **ac'id**. White soluble substance, in crystals, obtained by action of sulphuric anhydride on salicylic acid; employed as a delicate and exact test for proteids, albumens, peptones, fibrin, albuminous urine, etc.

Sulphosin apisin. A peculiar ingredient of Sinapis alba; a white, bitter, soluble neutral substance.

Sulphovi'nate of so'dium. A crystalline salt prepared by the action of sulphuric acid on alcohol at a specific temperature, carbonate of baryta being added, the resulting sulphovinate of baryta being neutralized by carbonate of sodium. Purgative in the dose of five or six drachms.

Sulphovi'nic ac'id. Sulphethylic or ethyl-sulphuric acid. An acid of syrupy consistence resulting from the action of sulphuric acid upon alcohol. Used as a solvent for iodoform, sulphur, naphthalin, camphor, chrysarobin, etc., and as a vehicle for these substances in cutaneous affections. See *Sulphovinate of sodium*.

Sul'phur. *Brimstone*. Native sulphur is called rock and black sulphur. Sulphur, as we meet with it, is in rolls, *Roll brimstone*. A volcanic production obtained in large quantities from Solfatara, in Italy. Roll sulphur is impure sulphur melted and run into moulds. Sulphur combined with a simple body or a compound radical forms a sulphuret. **S. al'cohol**, mercaptan. **S. antimonia'tum**, antimonii sulphuretum præcipitatum. **S. antimo'nii** or **S. aura'tum**, antimony pentasulphide. **S. caballi'num**, see *Sulphur sublimatum*. **S., car'buret of**, carbonis sulphuretum. **S. chlora'tum**, sulphur, chloride of. **S., chlo'ride of**, *Dichloride* or *Protochloride* or *Hypochloride* or *Subchloride of sulphur*, *Bisulphuret of chlorine*. One drachm of the liquid to an ounce of lard has been used in lepra, psoriasis, and other chronic cutaneous diseases. Ten drops dissolved in ether have been given in adynamic fever. **S., dichlo'ride of**, sulphur, chloride of. **S. diox'ide**, sulphurous acid. **S., hypochlo'ride of**, sulphur, chloride of. **S. iodat'um**, sulphuris iodidum. **S., i'odide of**, sulphuris iodidum. **S., io'duret of**, sulphuris iodidum. **S., liv'er of**, potassii sulphuretum. **S. lo'tum**, *Washed sulphur* (sublimed sulphur treated with water and water of ammonia, so as to wash away any acid it may contain, and then drying it); dose, gr. xxx–℥iij–iv. **S. ni'grum**, sulphur vivum; see *Sulphur sublimatum*. **S. oint'ment**, mixture of sublimed sulphur and benzoated lard in proportions of 3 to 7 (Ph. U. S.). **S. præcipita'tum**, *Milk of sulphur*, *Precipitated sulphur*; dose, ℥j–iij. **S., protochlo'ride of**, sulphur, chloride of. **S. stibia'tum aurantia'tum**, antimony pentasulphide. **S. s. ru'brum**, antimony oxysulphuret. **S., subchlo'ride of**, sulphur, chloride of. **S. sublima'tum**, *Sulphur*,

Sublimed sulphur, Flowers of sulphur. Sulphur of commerce, sublimed in close vessels. Sulphur is possessed of stimulant, laxative, and diaphoretic properties; as a laxative it is used in hemorrhoidal and other affections. In the itch, applied externally and taken internally, it has been considered almost a specific, and it is a valuable remedy in most cutaneous affections that are local. Dose, ℥ss to ℥ij. Fæces or dregs left in the purification or sublimation of sulphur are called *Horsebrimstone, Dregs of sulphur*, etc., and are very impure, being used externally only. **S., veg'etable,** lycopodium. **S. wort,** peucedanum.

Sul'phurated. Containing sulphur in composition, as sulphurated antimony; see *Antimonium sulphuratum.* **S. cal'cium,** see *Calx sulphurata.* **S. potas'sa,** see *Potassa sulphurata.*

Sulphureous, sul-fu're-us. *Sulphuretted, Sulphurous.* Possessing the properties of, relating to, or containing sulphur.

Sul'phuret. See *Sulphur.*

Sulphuretted, sul-fur-et'ted. Sulphureous. **S. hy'drogen,** see *Hydrogen, sulphuretted.*

Sulphure'tum ammoni'acæ. Ammonii sulphuretum. **S. ammo'niæ hydrogenat'um,** liquor fumans Boylii. **S. kal'icum,** potassii sulphuretum. **S. lixiv'iæ,** potassii sulphuretum. **S. stib'icum,** see *Antimonium.*

Sulphuric (sul-fu'rik) **acid.** H_2SO_4. *Oil of vitriol, Spirit of vitriol, Vitriolic acid.* Inodorous; has a strong acid taste, and is corrosive. S. g. 1.842 (Ph. U. S.); escharotic, stimulant, and rubefacient. Mixed with lard it is sometimes used in local pains and certain cutaneous affections. United with bases it forms sulphates. **S. ac'id, aromat'ic,** acidum sulphuricum aromaticum (Ph. U. S. and Br.); dose, gtt. x to xxx; properties are like those of diluted sulphuric acid, than which it is more frequently employed, being more agreeable. *Elixir of vitriol.* **S. ac'id, dilu'ted,** acidum sulphuricum dilutum (Ph. U. S. and Br.). Formed, according to the U. S. Pharmacopœia, of acid. sulphuric, f℥j; aquæ destillat., f℥xvss. Its s. g. is 1.067. It is tonic, astringent, and refrigerant; dose, gtt. x to xx, largely dilluted; used as a gargle, half a drachm may be added to f℥vj of water. Very dilute sulphuric acid was formerly termed *Phlegma vitrioli.* **S. ac'id lemonade'** is made by adding together sulphuric acid, water, and syrup. Nitric and phosphoric lemonades are similarly prepared. **S. e'ther,** see *Ether, sulphuric.*

Sul'phuris carbure'tum. Carbonis sulphuretum. **S. chlo'ridum,** sulphur, chloride of. **S. dichlo'ridum,** sulphur, chloride of. **S. io'didum** (Ph. U. S. and Br.), *S. ioduretum, Ioduret* or *Iodide of sulphur.* Employed externally in cutaneous affections; internally, in syrup, with potassium iodide in the same diseases, in scrofula, etc.

Sulphurius, sul-fu're-us. Sulphureous.

Sulphuro'sus. Sulphureous.

Sulphurous, sul'fur-ous. Sulphureous. **S. ac'id,** *Gas sulphuris, Acidum sulphurosum* (Ph. U. S. and Br.), *Sulphurous acid;* its s. g. is 1.022; it is sometimes used in the gaseous, at others in the liquid, state. Sulphurous acid gas is used to disinfect clothes, confined air, letters coming from infected places, etc.; also exhibited with great success in the form of fumigation in the treatment of certain chronic cutaneous affections and of sciatic and rheumatic pains in general. If respired pure, it acts in the manner of violent irritants, and is not long in producing death. It has been considered to be fatal to the lower forms of animal and vegetable life by denying them the oxygen necessary for their existence, and hence has been used as a parasiticide and to prevent fermentation, and likewise in zymotic diseases in general. With bases it forms sulphites, which have been employed in the cases for which sulphurous acid is indicated. Sulphites of sodium, potassium, ammonium, magnesium, and calcium have been used, and some of them are official. Bisulphites are also resorted to, especially that of lime, which is said to preserve oleaginous or fatty substances against spontaneous changes. Hyposulphites are used for the same purposes and in the same doses as the sulphites.

Sumach, su'mak. Rhus coriaria. **S., Chinese',** Ailanthus glandulosa. **S., fra'grant,** Rhus aromatica. **S., moun'tain,** Rhus copallina. **S., myr'tle-leaved,** Coriaria myrtifolia. **S., poi'son,** Rhus venenata. **S., stag's horn,** Rhus typhina. **S., sweet,** Rhus aromatica.

Suma'tra cam'phor. Camphor.

Sumbul, sum'bul. Name of a root, *Sumbul radix* (Ph. B.), *Muskroot,* much employed in Russia and Germany against cholera. Sumbul (Ph. U. S.) is the root of Ferula sumbul; it contains a strongly odorous principle like musk, and is regarded as an antispasmodic. **S. ra'dix,** sumbul root; see *Sumbul.*

Sum'bulus moscha'tus. Ferula sumbul.

Su'men (*sugimen,* the breast). Hypogastrium.

Summation, sum-ma'shun. Local stimulation applied to a muscle, producing tetanic contraction.

Sum'mer catarrh'. Fever, hay. **S. complaint',** popular name in the United States for diarrhœa occurring in summer; often also made to include dysentery and cholera infantum; with some it means cholera infantum only. **S. diseases,** see *Estival.* **S. fe'ver,** hay fever. **S. plant,** winter worm, Sphæria Sinensis. **S. rash,** lichen tropicus. **S. sa'vory,** Satureia hortensis; aromatic herb used for culinary purposes. **S. spots,** ephelides.

Sum'mitas cu'tis (*summus,* the highest). Epidermis.

Sum'mus hu'merus (top of the humerus). Acromion.

Sun dew. Drosera rotundifolia. **S. drops,** Œnothera glauca; mucilaginous, acrid plant, useful in certain eruptive diseases. **S. fe'ver,** fever of tropical regions, which is probably a severe form of febricula or simple fever. **S. flow'er, false,** Helenium autumnale. **S. flow'er, swamp,** Helenium autumnale. **S. flow'er, tick'weed,** Coreopsis trichosperma. **S. flow'er, tur'pentine,** Silphium perfoliatum. **S. pain,** see *Hemicrania.* **S. rash,** lichen. **S. spots,** ephelides. **S. stroke,** coup de soleil; insolation. **S. stroke, Egyp'tian,** coup de soleil; insolation.

Sun'burn. Ephelides.

Sup. As a prefix, under.

Supal'e. See *Valeriana.*

Supellectile Diogenis, su-pel-lek'til-e de-oj'en-is. Palm.

Supel'lex anatom'ica (*supellex,* household goods). Museum anatomicum. **S. Diog'enis,** palm.

Su'per (L.). In composition, above.

Superadd'ed teeth. Permanent teeth other than those replacing milk teeth.

Super'bus (proud). Rectus superior oculi.

Superchlo'ridum formyl'icum. Chloroform.

Supercilia, su-pur-sil'e-ah (pl. of **Supercil'ium,** eyebrow) (*super, cilium,* tarsal cartilage). Eyebrows. Two arched eminences—convex above, and more or less prominent according to the individual—which lie on the superciliary arch of the os frontis above the eyelids, and extend from the sides of the root of the nose to the temple. The inner extremity is more prominent than the outer. The eyebrows are covered with short and stiff hairs, which are directed from within outward and are commonly of the color of the hair. The skin in which these hairs are implanted rests on the orbicularis palpebrarum, the frontalis, and superciliaris muscles, which move the eyebrows in different directions. The eyebrows serve as an ornament to the countenance, and by covering the eye defend it from the impression of too strong a light. They direct the perspiration also from the eye.

Superciliaris, su-per-sil-e-ah'ris. Corrugator supercilii; superciliary.

Supercil'iary (*supercilium,* eyebrow). Relating to the supercilia or eyebrows. **S. arch'es,** *S. ridges;* two slightly projecting apophyses situate at the anterior surface of the os frontis, above the superior margin of the orbits. They are separated by the nasal boss and covered by the superciliaris muscle, to which they give attachment. **S. ar'tery,** branch of

frontal artery to region above the eyebrows. **S. ridges,** superciliary arches.

Supercilium, su-pur-sil'e-um (*super, cilium,* tarsal cartilage). Eyebrow. See *Supercilia.* **S. acetab'uli,** the edge of the cotyloid cavity of the os innominatum.

Superconcep'tion. See *Superfœtation.*

Superevacuatio, su-pur-ev-ak-u-ah'she-o. Excessive evacuation.

Superfecundation, su-pur-fek-un-da'shun. See *Superfœtation.*

Superfetation, su-pur-fe-ta'shun. Superfœtation.

Superfibrination, su-pur-fib-rin-a'shun. Increase in amount or proportionate amount of fibrin in the blood.

Superficialis colli, su-pur-fis-e-al'is kol'le (*superficies,* surface, *collum,* neck). Nerve formed by communicating branches from the second and third cervical nerves, distributed to the superficial parts of the neck. **S. vo'læ,** branch of radial artery, supplying muscles of thenar eminence and anastomosing with the ulnar to complete superficial palmar arch.

Superficies, su-pur-fish'e-ees. Surface. **S. articula'ris arytenoi'deæ,** facet on cricoid cartilage for articulation of arytenoid cartilages. **S. a. superio'ris,** superficies articularis arytenoideæ. **S. a. tibia'lis,** surface on upper end of fibula articulating with tibia. **S. auricula'ris,** auricular surface. **S. a. il'ii,** auricular surface of ilium. **S. conca'va and convex'a,** concave under and upper surfaces of liver. **S. costa'lis,** costal surface. **S. facia'lis,** facial surface. **S. fibula'ris,** articular facet for fibula on bend of tibia. **S. infratempora'lis,** zygomatic surface. **S. interpterygoï'dea,** interpterygoid surface. **S. luna'ta acetab'uli,** semilunar surface of acetabulum. **S. l. ra'dii,** sigmoid cavity of radius. **S. nasa'lis,** nasal surface. **S. orbita'lis,** see *Maxillary bone (superior).* **S. perone'a,** superficies fibularis. **S. petro-occipita'lis,** surface of posterior border of petrous bone, articulating with occipital behind jugular fossa. **S. planta'ris pe'dis,** sole. **S. symphys'eos pu'bis,** surface of pubis that is covered with cartilage for articulation with its fellow. **S. tempora'lis,** temporal surface. **S. thorac'ica,** costal surface.

Superfœcunda'tio. Superfœtation.

Superfœtatio, su-pur-fe-tah'she-o. Superfœtation.

Superfœtation, su-pur-fe-ta'shun (*super, fœto,* to breed). *Superfecundation, Superimpregnation.* Conception of a fœtus in a uterus already containing one. Impregnation of a female already pregnant. The possibility of this has been denied, but there is abundant evidence to show that it may occur at a very early period of pregnancy. Twin cases may be of this kind of superconception.

Supergeminalis, su-pur-jem-in-al'is (*super, gemini,* testicles). Epididymis.

Supergenualis, su-pur-jen-u-al'is (*super, genu,* knee). Patella.

Superhumerale, su-pur-u-mer-al'e (*super, humerus,* shoulder). The acromion; the upper part of the shoulder.

Superimpregnation, su-pur-im-preg-na'shun. Superfœtation.

Superinvolu'tion of the u'terus. Excessive involution, leading to atrophy of the uterus by producing increased absorption.

Supe'rior au'ris. Attollens aurem. **S. rotun'dus clitor'idis,** ischiocavernosus.

Superlabia, su-pur-lab'e-ah (*super, labia,* labia pudendi). Clitoris.

Superlactation, su-pur-lak-ta'shun. Excessive secretion of milk.

Superligamen, su-pur-lig-am'en (*super, ligamen,* a band or tie). A fascia, bandage, or ligature by which dressings are retained.

Superligula, su-per-lig'u-lah (*super, ligula,* tongue). Epiglottis.

Supernatant, su-pur-na'tant. Floating on or above a liquid.

Supernu'merary fin'ger (*super, numerus,* number). A finger more than the usual number. See *Digitus supernumerarius.*

Supernutritio, su-pur-nu-trish'e-o (*super, nutro,* to nourish). Hypertrophy. **S. lie'nis,** hypertrophy of the spleen. **S. sple'nis,** hypertrophy of the spleen.

Supernutrition, su-pur-nu-trish'un. Hypertrophy.

Superofrontal convolution, su-pur-o-fron'tal convo-lu'shun. Superior frontal convolution.

Superoxalas kalicum, su-pur-oks'al-as kal'ik-um. Potassium oxalate.

Superoxydum manganicum, su-pur-oks'id-um man-gan'ik-um. Dioxide of manganese.

Superpositus medicorum, su-pur-pos'it-us med-ik-o'rum (*super, positus,* placed). Archiater or chief physician.

Superpurgatio, su-pur-pur-gah'she-o (*super, purgo,* to purge). Hypercatharsis.

Supersalt, su'pur-salt. A salt having an excess of acid.

Superscapularis, su-pur-skap-u-lah'ris (*super, scapula*). Supraspinatus. **S. infe'rior,** infraspinatus.

Supersedent, su-pur-se'dent (*super, sedo,* to sit). A medicine whose operation on any part or organ is to displace or prevent diseased action in that part or organ; an antiperiodic, for example.

Superstibias potassicus, su-pur-stib'e-as po-tas'sik-us. Antimonium diaphoreticum.

Supervacuatio, su-pur-vak-u-ah'she-o. Excessive crisis or evacuation; a flux.

Supination, su-pi-na'shun (*supinus,* lying on the back). The movement in which the forearm and hand are carried outward so that the anterior surface of the latter becomes superior. In pathology, the horizontal position on the back, with the head thrown back and the legs and arms extended. It is often a sign of great weakness.

Supinato-extensor (su-pi-nah'to-ex-ten'sor) **mass.** Group of muscles on radial and dorsal surfaces of the forearm.

Supinator, su-pin-ah'tor. That which produces supination. A name of two muscles of the forearm. **S. bre'vis or mi'nor,** supinator radii brevis. **S. bre'vis accesso'rius,** brachiofascialis. **S. lon'gus or ma'jor,** supinator radii longus. **S. lon'gus accesso'rius,** portion of S. longus. **S. ra'dii bre'vis,** a muscle at the outer and back part of the forearm. It is attached, on the one hand, to the external tuberosity of the humerus and to a small portion of the posterior surface of the ulna, and is inserted into the upper third of the outer and upper surfaces of the radius. It produces, by contracting, supination. **S. ra'dii lon'gus** is seated at the anterior and outer part of the forearm. It arises from the inferior part of the outer edge of the os humeri and from the external intermuscular aponeurosis, and is inserted by a long tendon into the outer edge of the radius near the base of the styloid process. It causes the supination of the forearm, which it can likewise bend on the arm.

Supine'. Lying on the back.

Suppedanea, sup-ped-an'e-ah (*sup, pes,* foot). Remedies, as sinapisms, which are applied under the foot.

Suppedaneus, sup-ped-an'e-us. Poultice to sole of the foot.

Supplantalia, sup-plant-al'e-ah (*sup, planta,* the sole of the foot). Hypopodia.

Supplementa epiploica, sup-ple-men'tah ep-e-plo'-ik-ah (*sup, pleo,* to fill). Appendiculæ pinguedinosæ.

Supplement'ary. Term applied to accessory organs, as S. spleens, small bodies of splenic tissue found in neighborhood of the spleen. **S. air,** see *Respiration.*

Support'er, abdom'inal or **u'tero-abdom'inal** (*sup, porto,* to carry). Broad bandage applied to the abdomen so as to support and make methodical compression upon it.

Support'ing cells. Name applied to group of cells in organ of Corti.

Suppos'itor (*sup, pono, positum,* to place). An instrument for the introduction of a suppository into the rectum.

Supposito'ria (pl. of **Suppositorium**). Officinal name of suppositories. See *Suppository.* **S. ac'idi**

carbol'ici cum sapo'ne, suppositories each of which contains carbolic acid, gr. j; curd soap, gr. xv; glycerin of starch, gr. iii½ (Ph. Br). **S. a. tan'nici**, suppositories each containing tannic acid, gr. iij, and ol. theobromæ, gr. xij (Ph. Br.). **S. a. tan'nici cum sapo'ne**, suppositories containing each tannic acid, gr. iij; curd soap, gr. viii½; glycerin of starch, gr. iiss; starch, q. s. (Ph. Br.). **S. hydrar'gyri**, mercurial suppositories, composed each of ointment of mercury, gr. v, and ol. theobromæ, gr. x (Ph. Br.). **S. iodofor'mi**, suppositories each of which is composed of iodoform, gr. iij, and ol. theobromæ, gr. xij (Ph. Br.). **S. morphi'næ**, suppositories each of which contains hydrochlorate of morphine, gr. ss, with ol. theobromæ, gr. ij (Ph. Br.). **S. morphi'næ cum sapo'ne**, suppositories each of which contains hydrochlorate of morphine, gr. ss; glycerine of starch, gr. iiss; curd soap, gr. viii½; and starch, q. s. (Ph. Br.). **S. plum'bi compos'ita**, suppositories each of which contains acetate of lead, gr. iij; opium, gr. j; and ol. theobromæ, gr. xj (Ph. Br.).

Suppos'itories. Suppositoria. **S. of carbol'ic acid**, suppositoria acidi carbolici. **S. of glu'ten**, non-officinal preparations used to mechanically excite action of the rectum. **S. of io'doform**, suppositoria iodoformi. **S. of lead, com'pound**, suppositoria plumbi composita. **S., mercu'rial**, suppositoria hydrargyri. **S. of mor'phine**, suppositoria morphinæ. **S. of tan'nic acid**, suppositoria acidi tannici. **S. of tan'nic acid with soap**, suppositoria acidi tannici cum sapone.

Supposito'rium. Suppository. **S. uteri'num**, pessary.

Suppos'itory (*suppono*, to put under). A solid medicine in the form of a cone or cylinder, usually intended to be introduced into the rectum to favor or to restrain evacuations or as an anodyne. The vehicle commonly used for the active ingredients is cacoa butter, or in Great Britain curd soap or sapo animalis. It may require admixture with wax to give the proper consistence. Tallow with wax is used at times; glycerin of starch, starch, or soap is also used. The application of a suppository is termed *Balanismus*. *Uterine* and *vaginal suppositories* are prepared for introduction into the uterine cavity or cervical canal and the vagina; made, like suppositories for the rectum, of cacao butter, with or without wax, impregnated with the medicine to be exhibited, as acetate of lead, opium, morphine, tannin, etc. Gelatin and glycerin have been substituted for cacao butter. *Urethral suppositories*, *medicated bougies*, are also employed.

Suppres'sio al'vi (*sup*, *premo*, *pressum*, to press). Constipation. **S. lochio'rum**, suppression of the lochial discharge. **S. lo'tii**, suppression of urine. **S. men'sium**, amenorrhœa. **S. menstruatio'nis**, amenorrhœa. **S. sudo'ris**, suppression of sweat.

Suppression, sup-presh'un (*sup*, *premo*, *pressum*, to press). Failure of excretion or secretion, as of urine.

Suppu'rans. Suppurative.

Suppurate, sup'pu-rate. To form or secrete pus.

Suppura'tion (*sup*, *pus*). *Purulence*, *Purulency*, *Gathering*. Formation or secretion of pus. A frequent termination of inflammation which may occur in almost any tissue, caused by entrance of pyogenic micro-organisms into the tissues or fluids of the body. See *Abscess* and *Pus*; also *Pyogenia*.

Suppurative (sup'pu-ra-tiv) or **Sup'purant.** That which facilitates suppuration. Suppuratives are generally vesicants mixed with lard. **S. fe'ver**, fever accompanying suppuration.

Su'pra (L.). In composition, above.

Supra-acromial (su'prah-ak-ro'me-al) **ar'tery.** Superior acromial artery.

Supra-auricular (su'prah-aw-rik'u-lar) **diam'eter.** Inferior parietal diameter. **S. point**, situated on zygoma above the external auditory meatus.

Suprachoroidal (su-prah-ko-roid'al) **space.** Space between velum interpositum and fornix.

Supraclavicular, su-prah-klav-ik'u-lar. That which is above the clavicle.

Supracostales, su-prah-cos-tal'ees (*supra*, *costa*, rib). Twelve small fleshy fasciculi, flattened, triangular, and with radial fibres, passing from the transverse processes of the dorsal vertebræ to the superior margin of the rib beneath.

Supragenual (su-prah-jen'u-al) **bur'sa.** Subcrural bursa.

Supraglenoid (su-prah-glen'oid) **tu'bercle.** Rough surface of attachment above the glenoid cavity for insertion of the long head of the biceps.

Suprahepat'ic veins. See *Hepatic veins*.

Suprahyoid (su-prah-hi'oid) **aponeuro'sis.** Fascia running between the hyoid bone and tendon of digastric muscle. **S. re'gion**, submaxillary region.

Supra-inguinal (su'prah-in'gwin-al) **re'gion.** Triangular space bounded by Poupart's ligament, rectus abdominis muscle, and horizontal line drawn through the crest of the ilium.

Supralabialis, su-prah-lab-e-al'is. Levator labii superioris.

Supramar'ginal convolu'tion, gy'rus, or **gyre.** Convolution in parietal portion of brain, forming superior margin of posterior arm of Sylvian fissure.

Supra-obliquus, su'prah-ob-le'kwus. Superior oblique.

Supra-occipital, su'prah-ok-sip'it-al. Above occiput. **S. angle**, included between lines from inion and lambda to auricular point. **S. bone**, squamous portion of occipital bone.

Supra-omphalodym'ia (*supra*, *omphalos*, navel, *duo*, to mingle). See *Somatodymia*.

Supra-or'bital. Situate above the orbit of the eye. **S. arch**, a curved and prominent margin of bone forming the upper boundary of the orbit, and separating the horizontal from the vertical portion of the bone. **S. ar'tery**, see *Frontal*. **S. fora'men**, notch or foramen completed by a ligament at the inner third of the orbitar arch. It gives passage to the supra-orbitar or superciliary artery, a branch of the ophthalmic, which ascends the forehead and is distributed thereto. **S. line**, drawn horizontally just above root of external angular processes of frontal bone. **S. nerve**, branch of frontal nerve. **S. notch**, S. foramen. **S. point**, ophryon. **S. ridge**, S. arch. **S. sul'cus**, fissure on median aspect of frontal lobes parallel to lower border of that surface. **S. vein**, branch of facial running to the forehead.

Supra-or'bitar. Supra-orbital.

Suprapontine, su-prah-pon'teen. That which is above the pons. **S. ar'teries**, branches of basilar.

Suprapubian (su-prah-pu'be-an) or **Suprapu'bic.** That which is seated above the pubis. **S. nerve**, internal ramus of the inguinocutaneous branch of the first lumbar nerve; genitocrural branch. It descends almost vertically before the psoas muscle, and near crural arch divides into two branches, one of which accompanies the spermatic cord, and is distributed to the cremaster, scrotum, and integuments on the inner part of the thigh; the other issues from the pelvis with the femoral filaments, traverses the aponeurosis of the thigh, and is distributed to the integuments of the upper and anterior part of the limb.

Suprarenal, su-prah-re'nal (*supra*, *ren*, kidney). Seated above the kidney. **S. ar'teries** supply S. bodies; derived from the aorta, inferior phrenic, and renal arteries. **S. bod'y**, renal capsule. **S. cap'sule**, renal capsule. **S. nerves**, branches to S. bodies from solar plexus. **S. plex'us**, formed by S. nerves from solar plexus. **S. veins**, from the suprarenal bodies, emptying into the vena cava inferior and the left renal vein.

Suprascap'ula. Portion of base of scapula having separate centre of ossification.

Suprascapular, su-prah-scap'u-lar. Seated above the scapula. **S. ar'tery**, branch of thyroid axis supplying supra- and infraspinatus muscles. **S. bone**, bone found in lower animals, corresponding to suprascapula in man. **S. fas'cia**, deep fascia covering muscles of suprascapular region. **S. fora'men**, formed

by ossification of coracoid ligament. **S. lig'ament,** coracoid ligament. **S. nerve** arises from the fifth cervical, passes through the suprascapular notch, and is distributed to the supraspinatus and infraspinatus muscles. **S. notch,** at outer extremity of superior border of scapula at base of coracoid process. **S. re'gion,** portion of the back above the scapula. **S. veins,** tributaries of external jugular from suprascapular region.

Suprascapula'ris. Suprascapular. Supraspinatus muscle.

Suprasemiorbicularis, su-prah-sem-e-or-bik-u-lah'-is. Orbicularis oris.

Supraserra'tus mus'cle. Serratus posticus superior.

Supraspi'nal. Supraspinatus.

Supraspina'ta fos'sa. Supraspinous fossa. A triangular depression above the spine of the scapula.

Supraspina'tus. *Supraspinosus, Supraspinalis, Supraspinal, Supraspinous.* That which is seated above a spine. **S. ar'tery,** branch of posterior scapular artery. **S. fos'sa,** supraspinata fossa. **S. mus'cle,** situate in the fossa supraspinata; attached, on the one hand, to the two inner thirds of the fossa supraspinata, and terminating, on the other, at the anterior part of the great tuberosity of the humerus. This muscle raises the arm.

Supraspinosa (su-prah-spin-o'sah) **ligamen'ta.** *Supraspinal ligaments.* These are two in number: 1. The dorsolumbosupraspinal ligament, extending above the spinous processes of the dorsal and lumbar vertebræ from the seventh cervical as far as the median crista of the sacrum. 2. Cervical supraspinal ligament, extending above all the cervical spinous processes, and attached above to the outer occipital protuberance.

Suprasternal, su-prah-stur'nal. Above the sternum or breast-bone. **S. ar'tery,** branch of the suprascapular artery to the skin of the upper part of the chest. **S. bones,** two small bony nodules occasionally found united by ligament and cartilage to upper part of sternum. **S. nerve,** one of the supraclavicular nerves. **S. notch,** depression at upper end of sternum.

Suprasternal'is. Suprasternal. **S. fos'sa,** depressed space in the neck above the sternum.

Sur (L.). *Supra.* In composition, above.

Sura, su'rah. Calf of the leg. The projection formed at the posterior part of the leg by the gastrocnemius muscles. Also the fibula.

Sural, su'ral. Relating to the calf of the leg. **S. ar'teries,** inferior muscular branches of the popliteal. **S. nerve,** nerve formed by junction of external cutaneous branch of the peroneal and the communicating fibular nerves. **S. vein,** subcutaneous vein of the calf of the leg.

Suralis, su-ral'is. Sural. See *Gastrocnemii.*

Surculi fellei, sur'ku-le fel'la-e (pl. of **Surculus**). Ducts which receive the bile from the penicilli of the liver and convey it to the hepatic duct.

Surculus, sur'ku-lus (a young branch). A division of a ramus or branch.

Surditas, sur'dit-as (*surdus,* deaf). Deafness. **S. muto'rum,** deaf-dumbness. **S. verba'lis,** word-deafness; see *Aphasia.*

Surdity, surd'it-e (*surdus,* deaf). Deafness.

Sur'domute. One who is deaf and dumb; a deaf-mute.

Surdomutitas, sur-do-mu'tit-as (*surdus,* deaf, *mutus,* mute). Deaf-mutism.

Sur'dus. Deaf.

Surfeit, sur'fit (*surfait* (F.), excess). Intemperance; excess of any kind. Colic from overeating.

Surgeon, sur'jun (*cheir,* hand, *ergon,* work). *Chirurgeon.* One who practises surgery or devotes his study, time, and occupation chiefly to that branch of medical science and art. In the Middle Ages the universities of Italy and Spain sent out educated surgeons, as well as physicians, under the name *chirurgi physici.*

Sur'geon-apoth'ecary. One who unites the practice of surgery with that of the apothecary. A general practitioner, the ordinary medical man or family medical attendant in England; and when he combines, as he usually does, obstetrics with his practice, he is termed a *surgeon-accoucheur,* in contradistinction to the *physician-accoucheur,* who practises as a physician and an accoucheur. See *Apothecary.*

Surgeoncy, sur'jun-see. The office of a surgeon.

Sur'geon-den'tist. Dentist.

Sur'geon's ag'aric. Powder prepared from species of mushroom, Boletus laricis or B. igniarius, used as a hæmostatic.

Surgery, sur'jur-e. The part of the healing art relating to external diseases, and to injuries of any part or organ, their treatment, and the operations adapted for their cure. In Great Britain the surgeon's office is called the Surgery. **S., anaplas'tic,** anaplasty; morioplastice. **S., autoplas'tic,** anaplasty; morioplastice. **S., conserv'ative,** see *Surgery, salvation.* **S., den'tal,** dentistry. **S., ma'jor,** see *Surgery, operative.* **S., mil'itary,** that which relates to the operations performed on the field of battle or subsequently, with the attention to be paid to the wounded, etc. **S., mi'nor,** see *Surgery, operative.* **S., op'erative,** includes major surgery, comprising the capital or more important operations, and minor surgery, the lesser, or those of every-day occurrence. **S., orthopæ'dic,** treatment of deformities; see *Orthopædic.* **S., plas'tic,** anaplasty and morioplastice. **S., salva'tion,** conservative surgery; that which looks rather to the preservation of a part than its removal. One addicted to operating in almost all cases is sometimes called a *knifesman.*

Surgical, sur'je-kal. That which relates to surgery, as S. anatomy, S. operations, S. instruments, etc. **S. anat'omy,** see *Anatomy.* **S. fe'ver,** see *Fever, surgical.* **S. kid'ney,** inflammation of the kidney, usually purulent, secondary to disease or injury of urinary tract below. It is technically a form of acute suppurative nephritis. **S. tuberculo'sis,** tubercular lesions capable of surgical treatment. **S. ty'phus,** pyæmia.

Surinam (sur-in-am') **bark.** Bark of Geoffroya Surinamensis. **S. quas'sia,** bark of Geoffroya Surinamensis.

Surinamine, sur-in'am-een. See *Geoffroya Surinamensis.*

Surra, sur'rah. Disease of India attacking horses, mules, and camels; caused by presence of Spirochæta Evansi in the blood.

Surrecta alba, sur-rek'tah al'ba. Ranunculus flammula.

Surrogatum, sur-ro-gat'um (*sur* for *sub, rogo,* to ask). Succedaneum.

Surumpe, su-rum'pe. Retinal hyperæsthesia; observed in the Andes.

Sursumduction, sur-sum-duk'shun (*sursum,* upon, *duco,* to lead). Act of blending into one two images that are produced by placing a prism in front of one eye.

Survival, sur-vi'val. Persistence of life.

Survivorship, sur-vi'vor-ship (*super, vivo,* to live). In legal medicine, the probability that any individual has survived others in an accident which has been fatal to all; often an important question connected with the inheritance of property.

Sus (same as **Sursum,** above). Prefix in certain Romanic words signifying above.

Susceptibility, sus-sep-tib-il'it-e (*sus, capio,* to take, easily taking). Sensibility in its most enlarged acceptation. Impressibility.

Suscept'ible. Readily impressible. Liable to be affected by morbid influences.

Susceptio intestinorum, sus-sep'she-o in-test-in-o'-rum. Intussusception.

Susotoxine, su'zo-tox-een (*sus,* hog, *toxicon,* poison). $C_{10}H_{26}N_2$ (?). Ptomaïne from cultures of hog-cholera bacillus. See *Ptomaïnes* (table).

Suspend'ed anima'tion. Temporary stoppage of some vital functions; asphyxia, syncope, catalepsy, trance. See *Asphyxia* and *Drowning, resuscitation from.*

Suspendiculum, sus-pen-dik'u-lum (*sus, pendo,* to hang). Cremaster.

Suspensa, sus-pen'sah (*sus*, *pendo*, to hang). Cloud suspended in the urine as it cools.

Suspen'sion. Treatment adopted with good effect in some cases of chronic affection of the spinal cord to produce temporary extension by a process similar to that of hanging, support being given at the chin and back part of the head.

Suspensorium, sus-pen-so're-um. Suspensory. **S. hep'atis**, suspensory ligament of the liver. **S. tes'tis**, cremaster.

Suspensory, sus-pen'so-re. That which sustains or suspends. **S. band'age**, bandage intended to support the scrotum in diseases of the testicles or in scrotal hernia. It consists of a kind of bag, fixed above to a cincture, and retained below by strings passing between the thighs and fixed to the cincture behind. **S. lig'ament of axil'la**, part of deep layer of axillary fascia. **S. lig'ament of clit'oris**, dense band of fascia running from symphysis pubis to dorsum of clitoris. **S. lig'ament of the lens**, thin, transparent membranous structure between the vitreous body and the ciliary processes of the choroid, connecting the anterior margin of the retina with the anterior surface of the lens, and assisting in retaining the lens in its position. **S. lig'ament of the liv'er**, *Falciform ligament*, *Broad ligament of the liver*; triangular duplicature of the peritoneum, between the inferior surface of the diaphragm and the upper surface of the liver, continuous with the great falx of the umbilical vein. **S. lig'ament of the mam'ma**, fibrous processes passing from the anterior layer of the superficial fascia to the integument and nipple, enclosing in their areolæ masses of fat. **S. lig'ament of odon'toid pro'cess**, band of fibres connecting odontoid process of axis with margin of foramen magnum. **S. lig'ament of the pe'nis**, fibrocellular fascia, of triangular shape, extending from the anterior part of the symphysis pubis to the corpus cavernosum, which it sustains. **S. lig'ament of pericar'dium**, name applied to process of fascia covering great vessels of thorax and fusing with deep cervical fascia. **S. lig'ament of the spleen**, fold of peritoneum connecting the spleen with the diaphragm. **S. lig'aments of di'aphragm**, processes from prevertebral fascia to central tendon of diaphragm. **S. lig'aments of duode'num**, strong fibrous bands extending from right crus of diaphragm and tissue around cœliac axis to transverse portion of duodenum; said to contain plain muscular fibres.

Suspensum urinæ, sus-pen'sum u-re'ne. Cloud suspended in the urine as it cools.

Suspiration, sus-pir-a'shun (*su* for *sub*, *spiro*, to breathe). Suspirium.

Suspiratus, sus-pir-at'us. Suspirium.

Suspiritus, sus-pir'it-us. Suspirium.

Suspirium, sus-pir'e-um. *Sigh*, *Suspiration*. A short, audible breathing; also voluntary contraction of the diaphragm and intercostal muscles to restore the due relation between the circulation and respiration, or to free one's self from inconvenient sense of weight felt in the chest when much depressed. The sigh differs from the sob, the latter being involuntary and spasmodic; if accompanied with a vocal sound, it constitutes a groan. When the respiration, on auscultation, resembles sighing, it is called, by some, *Suspirous* or *Suspirious*. **S. cardi'acum**, angina pectoris.

Sustentacular (sus-ten-tak'u-lar) **fi'bres.** Annular muscle of Müller.

Sustentaculum, sus-ten-tak'u-lum (*sus*, *teneo*, to hold). Aliment. **S. lie'nis**, fold of peritoneum extending from the diaphragm to the splenic flexure of the colon, indirectly supporting the spleen. **S. ta'li**, see *Calcaneum*.

Sustentator clitoridis, sus-ten-tat'or clit-or'id-is. Erector clitoridis. **S. pe'nis**, erector penis. **S. rec'ti**, bands of unstriped muscular fibres passing from anterior surface of the coccyx to the rectum, including the rectococcygeus. **S. tu'nicæ muco'sæ**, thin stratum of muscle-fibres between mucous membrane and internal sphincter of anus.

Susurration, sus-ur-ra'shun (*susurro* to murmur, to whisper). Whispering.

Susurrus, sus-ur'rus. A murmur heard in diseases of the heart, over aneurismal tumors, etc. **S. au'rium**, tinnitus aurium.

Sutela, su-ta'lah (*suo*, to sow). Suture.

Suterberry, su'ter-ber-e. Xanthoxylum fraxineum.

Sutorius, su-tor'e-us (*sutor*, a shoemaker). Sartorius.

Sutter, sut'tur. Saccharum.

Sut'ton and Gull's disease. Arteriosclerosis.

Sutura, su-tu'rah. Suture. **S. abdomina'lis**, gastrorraphy. **S. arcua'lis**, coronal suture. **S. biparieta'lis**, sagittal suture. **S. bregmatomastoï'dea**, occipitomastoid suture. **S. clava'ta**, quilled suture. **S. corona'lis**, coronal suture. **S. cor'poris callo'si exter'na**, see *Raphe*. **S. cra'nii squamo'sa**, squamous suture. **S. cuta'nea**, raphe of palate. **S. denta'ta**, see *Suture*. **S. fronta'lis**, frontal suture. **S. frontoparieta'lis**, coronal suture. **S. harmonia'lis**, see *Harmony*. **S. imperfec'ta Web'eri**, fine groove or suture on outer side of nasal process of superior maxillary bone. **S. incisi'va**, suture in the jaw during fœtal life, extending from the incisive foramen to the septum between the alveoli of the lateral incisors and canines. **S. in'fra-orbita'lis**, fine suture on orbital surface of superior maxillary bone. **S. in'fra-orbita'lis transver'sa**, fine suture at times found running from S. infra-orbitalis to lacrymal notch. **S. inter-endogna'thica**, suture formed between palatine bones and between palatine processes of superior maxilla. **S. interparieta'lis**, sagittal suture. **S. juga'lis**, sagittal suture. **S. lambdoïda'lis**, lambdoid suture. **S. lepidoï'des**, squamous suture. **S. limbo'sa**, see *Suture*. **S. longitudina'lis**, sagittal suture. **S. longitudina'lis imperfec'ta**, S. imperfecta Weberi. **S. mastoï'dea**, suture formed by union of occipital and mastoid processes of temporal bone. **S. mastoïdeosquamo'sa**, suture at times found on mastoid process of temporal bone. **S. mendo'sa**, squamous suture. **S. no'tha**, see *Suture*. **S. obelæ'a**, sagittal suture. **S. occipita'lis**, lambdoidal suture. **S. occipitomastoï'dea**, occipitomastoid suture. **S. occipitoparieta'lis**, lambdoid suture. **S. os'sium spu'ria**, harmony. **S. palati'na**, S. inter-endognathica. **S. parieta'lis**, sagittal suture. **S. parietomastoï'dea**, parietomastoid suture. **S. parietotempora'lis**, suture formed by junction of parietal and temporal bones. **S. petrobasila'ris**, suture formed by junction of petrous portion of temporal and basilar process of occipital bones. **S. petrosquamo'sa**, suture found at birth between petrous and squamous portions of temporal bone. **S. pro'ræ**, lambdoid suture. **S. puncta'ta**, suture, common. **S. pup'pis**, coronal suture. **S. rec'ta**, sagittal suture. **S. rhabdoï'des**, sagittal suture. **S. sagitta'lis**, suture between the parietal bones. **S. serra'ta**, see *Suture* and *Sagittal suture*. **S. sphe'no-ethmoida'lis**, formed by junction of sphenoid and ethmoid bones. **S. sphenoparieta'lis**, formed by junction of sphenoid and parietal bones. **S. sphenotempora'lis**, formed by junction of great wing of sphenoid and squamous portion of temporal bones. **S. sphenozygomat'ica**, formed by junction of sphenoid and malar bones. **S. spu'ria**, see *Suture*. **S. squamo'sa**, see *Suture*. **S. tempora'lis**, temporoparietal suture. **S. transver'sa os'sis occip'itis**, suture at times found separating upper from lower portion of squamous portion of occipital bone. **S. ve'ra**, see *Suture*. **S. Wormia'na ante'rior**, lambdoid suture, upper portion. **S. Wormia'na poste'rior**, S. transversa ossis occipitis. **S. zygomaticofronta'lis**, formed by junction of malar and frontal bones. **S. zygomaticosphenoïda'lis**, formed by junction of malar and orbital surface of great wing of sphenoid bones.

Sutural, su'tu-ral (same etymon as **Suture**). Relating to a suture. **S. lig'ament**, see *Ligament, sutural*.

Suture, su'ture (*suo*, to stich). *Sutela*, *Dovetail joint*. A kind of immovable articulation, in which the bones unite by means of serrated edges dovetailed into each other. The articulations of the greater part of the bones of the skull are of this kind. The coronal, lambdoidal, and sagittal sutures are called

true sutures, suturæ veræ; the two temporal are called false sutures, suturæ nothæ or spuriæ or squamosæ. A dentated suture—sutura dentata—is one in which the processes are long and dentiform, as in the interparietal suture. In a serrated suture—sutura or syntaxis serrata—the indentations and processes are small and fine, like the teeth of a saw, as in the suture between the two portions of the frontal bone. In the sutura limbosa there is, along with the dentated margins, a degree of bevelling of one, so that one bone rests on the other, as in the occipitoparietal suture.

Suture, in surgery, *Stitch*, is an operation consisting in stitching the lips of a wound to procure union. Union obtained by means of adhesive plaster simply has been termed sutura sicca or dry suture, in opposition to the sutura cruenta or suture properly so called. The chief sutures are the interrupted suture, the quilled suture, the glover's suture, and the twisted suture.

1. The INTERRUPTED SUTURE is formed by passing a needle, armed with a ligature, through the lips of the wound previously brought into contact and tying or twisting the extremities of the thread. The other stitches are made in the same manner. They are separate or interrupted.

2. The QUILLED SUTURE, *Sutura clavata, Compound suture*, is merely the interrupted suture when the ligatures are not tied over the face of the wound, but over two quills or rolls of plasters, or bougies, laid along the sides of the wound. It is used by some on account of the less danger of the stitches tearing out, but is not much employed. The *Clamp suture* of Dr. Sims is a modification of this. It is formed by two cylinders of silver or lead, perforated at several points for the passage of small pieces of fine silver wire, prevented from slipping by perforated shot carried down upon them, pressed against the cylinders, and kept in place by being pinched with pliers.

3. The GLOVER'S SUTURE, *Continued* or *Uninterrupted suture*. Executed by introducing the needle first into one lip of the wound from within outward, then into the other in the same way.

Various sutures have been proposed for union of the intestines in wounds thereof, as the *Suture of the four masters*, in which both ends of the intestines are stitched on a piece of the windpipe of some animal or on a cylinder of cardboard oiled; the *Suture of Ramdohr*, with ensheathing or invagination of the upper into the lower part of the intestine; the *Suture of Bertrandi*, which differs only from the continued suture in the ligature being passed through, not over, the margins of the solution of continuity; the *Suture of Jobert*, which is made by introducing the needle on the serous surface of the viscus, passing under the serous coat, and bringing the point out upon the serous surface again. This same process is then repeated inversely on the other side, so that when the suture ends are tied two flat serous surfaces are brought into contact. The *Czerny-Lembert suture* is this suture with addition of single row of separate sutures uniting the cut edges of mucous membrane. In *Gély's suture* two needles are inserted near the angle of the wound, then carried along the interior of the bowel, parallel with the wound, for the sixth of an inch, and brought out precisely at the same level. The threads are then crossed, each needle being passed through the puncture made by the other. *Appolito's suture* is made by using a needle with double thread, passing through all the coats of intestine, making the thread appear in transverse direction to the wound from the outside, longitudinally to the surface on the inside, and the process repeated if necessary. *Cushing's suture* is a modification of that of Appolito; it is a right-angle continuous suture that passes through the serous and muscular coats, but avoids the mucous coat.

4. The ROYAL STITCH or SUTURE is the name of an old operation for the cure of bubonocele. It consisted in putting a ligature under the hernial sac, close to the abdominal ring, and tying that part of the sac, so as to render it impervious by the adhesive inflammation thus excited.

5. The STAPLE SUTURE consisted of a piece of steel wire shaped like a staple, the ends of which were ground to a triangular or glover's point. In using it, the points of the staple were brought through both margins of the wound, and then bent back.

6. The TWISTED SUTURE, employed chiefly to unite wounds of the cheeks and of the free edges of the lips. To perform it a pin or needle is passed through the edges of the wound, so as to keep them thoroughly in contact. A piece of thread is then wound accurately around the pin, from one side of the division to the other, in the form of the figure 8. Delicate rings of India-rubber have been substituted for the figure-of-8 turns, especially after ovariotomy. This form of suture is then called the *India-rubber suture*. The number of pins must, of course, correspond with the extent of the wound. This is the suture used in cases of hare-lip. The BUTTON SUTURE, employed in vesicovaginal fistula, is a modification of this.

7. The LOOP STITCH of Le Dran has only been employed in cases of wounds of the intestines. For this purpose the edges of the wound are brought together, and as many needles, with unwaxed threads, used as there are to be stitches. Each stitch is then made by passing a needle through the edges. All the ligatures belonging to one side of the wound are tied together and twisted so as to form a thread, which is fixed externally.

8. The IMPLANTED SUTURE is formed by pins arranged parallel to the edges of the wound and implanted in their substance. By means of threads the needles are approximated so as to bring the edges of the wound together.

9. The PLASTIC SUTURE of Prof. Joseph Pancoast is a suture by tongue and groove. The groove is made by an incision in the part which is to receive the flap. The tongue is made on the flap by bevelling off the two surfaces, cuticular and adipose. The suture is made by passing a loop of thread, by two punctures, deep through the inner lip of the groove. The two needles are passed through the base of the tongue, and again through the outer lip of the groove. The two ends of the thread are then tied over a small roll of adhesive plaster, by which the tongue is, of necessity, forced deep into the groove. Four raw surfaces are thus firmly held in connection, making the union of parts, by this suture, a very certain process. In the *Shotted suture* perforated shot are used for purposes of compression in connection with wires and a metal bar through which a hole is drilled for the passage of the wires, or perforated shot are run over ends of wire and then clamped.

Suture. See *Sutura.* **S., anatom'ical,** close union of the borders of flat bones. **S., antisep'tic,** ligature, antiseptic. **S. of Bertran'di,** see *Suture.* **S., bipari'etal,** sagittal suture. **S., but'ton,** see *Suture, twisted.* **S., clamp,** see *Suture, quilled.* **S., com'pound,** suture, quilled. **S., contin'ued,** see *Suture.* **S., coro'nal,** suture between the frontal and parietal bones. **S., Cush'ing's,** see *Suture.* **S., Czer'ny-Lem'bert,** see *Suture.* **S., dry,** suture made by adhesive strips applied to the borders of the wound, the edges of the plaster being sutured. **S., false har'mony,** see *Suture.* **S., figure-of-8,** see *Figure of 8.* **S., Gély's,** see *Suture.* **S., glov'er's,** see *Suture.* **S., hare-lip,** see *Suture* and *Hare-lip.* **S., in'dia-rub'ber,** see *Suture.* **S., interrupt'ed,** see *Suture.* **S. of the intes'tines,** see *Suture (glover's).* **S. of Jobert,** see *Suture.* **S., knot'ted,** interrupted suture; see *Suture.* **S., Le Dran's,** see *Suture.* **S. of Lembert,** see *Suture.* **S., occipitopari'etal,** lambdoid suture. **S., perine'al,** perinæorrhaphy. **S., plas'tic,** see *Suture.* **S., quilled,** see *Suture.* **S. of Ram'dohr,** see *Suture.* **S., roy'al,** see *Suture.* **S., sagit'tal,** see *Sagittal suture.* **S., shot'ted,** see *Suture.* **S., Sims's,** see *Suture, quilled.* **S., sta'ple,** see *Suture.* **S., superfic'ial,** harmony. **S., sur'gical,** forms of suture employed in surgery;

see *Suture.* **S., twist'ed,** see *Suture.* **S., uninterrupt'ed,** see *Suture, glover's.*

Suzanne's gland. Small mucous gland under the alveololingual sulcus of the mouth.

Swab. A piece of sponge or rag tied to a rod of whalebone or wood, for cleansing the mouth of the sick or applying remedial agents to deep-seated parts; the process is termed swabbing.

Swad'dling-clothes. Swathing-clothes.

Swag'belly. Physconia.

Swal'low. Hirundo. **S. wort,** Asclepias vincetoxicum. **S. wort, or'ange,** Asclepias tuberosa. **S. wort, tu'berous-root'ed,** Asclepias tuberosa. **S. wort, white,** Asclepias vincetoxicum.

Swal'lowing. Deglutition.

Swal'low's nest. Fossa deeply seated in the cerebellum near the uvula; nidus hirundinis.

Swamp apple. Excrescence formed by parasites upon swamp azalea. **S. cab'bage,** Dracontium fœtidum. **S. dog-wood,** Petela trifoliata. **S. fe'ver,** malarial fever. **S. hel'lebore,** Veratrum viride. **S. itch,** scabies or pruritus. **S. laurel,** Kalmia glauca. **S. sas'safras,** Magnolia glauca. **S. sick'ness,** milk sickness. **S. sumach,** Rhus venenata. **S. wood,** Cephalanthus occidentalis; Dirca palustris.

Swan Al'ley sore. See *Phagedenic chancre.*

Swa'thing-clothes. *Swaddling-clothes.* Kind of clothing or bandaging formerly applied to children during the first year of life.

Sweam'ish. See *Syncope.*

Sweat. Sudor. **S., blood'y,** sudor cruentus. **S., blue, red,** etc., see *Chromidrosis.* **S. canal',** excretory duct from sweat-gland. **S. cen'tre,** supposed centre in medulla oblongata, which excites excretion of sweat. **S., colliq'uative,** see *Colliquative.* **S. glands,** see *Perspiration.* **S. pores,** see *Pore.* **S. root,** Polemonium reptans. **S. scab,** crusta genu equinæ. **S. ves'icle,** sudamina.

Sweat'ing. Ephidrosis. **S. bath,** achicolum. **S. of blood,** see *Diapedesis* and *Sudor cruentus.* **S. house,** achicolum. **S. plant,** Eupatorium perfoliatum. **S. room,** achicolum. **S. sickness,** miliary fever, with profuse sweating and an eruption of miliary vesicles; sometimes epidemic, as in Germany and Switzerland. Sudor Anglicus. **S. sick'ness, Mal'wah,** disease which appears to be allied to the worst form of cholera, and to bear a close relation to malignant congestive fever, which occurred in Malwah, India.

Swe'dish gymnas'tics, S. move'ments, or **S. sys'tem.** System of active movements with massage. **S. leech,** hirudo medicinalis.

Sweet al'mond. Amygdala dulcis. **S. bal'sam,** Gnaphalium polycephalum. **S. ba'sil,** Ocinum basilicum. **S. bay,** Magnolia glauca. **S. birch,** Betula lenta, an American species of birch, containing a principle allied to amygdalin, which, uniting with water, forms an oil similar to that of gaultheria. **S., bit'ter,** Solanum dulcamara; S. triosteum. **S. bread,** pancreas, thymus. **S. bush,** Comptonia asplenifolia. **S. cassa'va,** Jatropha manihot. **S. ci'cely,** Osmorrhiza longistylis. **S. clo'ver,** Trifolium melilotus. **S. fern,** Comptonia asplenifolia; Adiantum pedatum. **S. flag,** Acorus calamus. **S. gale,** Myrica gale. **S. gum,** liquidambar. **S. lau'rel,** Illicium floridanum. **S. mar'garum,** Origanum marjorana. **S. myr'tle,** Acorus calamus. **S. oil,** oleum olivæ. **S. or'ange peel,** Citrus aurantium. **S. or'ange tree,** Citrus aurantium. **S. pep'per bush,** Clethra alnifolia. **S. pod,** Ceratonium siliqua. **S. pota'to,** foodstuff; root of Batata edulis. **S. prin'ciple of oils,** glycerin. **S. root,** Aralia nudicaulis. **S. sca'bious,** Erigeron Canadense. **S. scent'ed gold'en-rod,** solidago. **S. scent'ed life-everlast'ing,** Gnaphalium polycephalum. **S. scent'ed shrub,** calycanthus. **S. scent'ed vir'gin's bower,** Clematis flammula. **S. scent'ed wa'ter lily,** Nymphæa odorata. **S. sedge,** Acorus calamus. **S. sop,** edible fruit of Anona squamosa. **S. spirit of ni'tre,** spirtus ætheris nitrici. **S. su'mach,** Rhus aromatica. **S. tinct'ure of rhu'barb,** tinctura rhei dulcis. **S. wood-bark,** Cascarilla.

Swell'ing. Tumefaction. Morbid increase in bulk in any part of the body. See *Tumor.* **S., cloud'y,** see *Cloudy.* **S., glass'y,** a term applied to the external appearance presented by croupous membrane. Also amyloid infiltration. **S., white,** hydrarthrus.

Swertia chirayita, swur'te-ah chir-a'e-tah (after Emanuel Swert, a Dutch botanist). Gentiana chirayita. **S. diffor'mis,** see *Calumba.* **S. Fras'era,** see *Calumba.* **S. lu'tea,** Gentiana lutea.

Swietenia febrifuga, swe-ten'e-ah feb-rif'u-gah (after Von Swieten). *Febrifuga Swietenia;* ord. Meliaceæ. Native of the East Indies; the bark, called rohena bark, is tonic and stomachic, and has been used in intermittents and diseases where bitter tonics are indicated. Dose, ℈j to ℈ij of the powder. **S. mahog'ani,** *Mahogany tree* of West Indies and tropical America, is possessed of tonic and febrifuge properties. **S. Senegalen'sis,** *Khaya Senegalensis,* a common forest tree on the borders of the Gambia. The bark, called cailcedra and karson khayi, is bitter and antiperiodic.

Swim. Air-bladder.

Swim'bladder. Air-bladder.

Swim'ming. Natation. **S. blad'der,** air-bladder. **S. of the head,** vertigo.

Swine plague. *Pig typhoid, Hog cholera.* Acute, frequently fatal, contagious, and epidemic disease of swine, accompanied, as a rule, by necrotic ulceration of the bowels and pneumonia; supposed to be caused by a specific bacillus. See *Bacillus.* **S. pox,** see *Varicella.* **S. this'tle,** sonchus.

Swiss tape'worm. Bothriocephalus latus.

Swoon. Syncope.

Swoon'ing. Syncope.

Sy. In composition, with, together. See *Sym.*

Syaladenitis, si-al-ad-en-e'tis. See *Sialadenitis.*

Sycaminum, sik-am-e'num (*sukaminon*). See *Morus nigra.*

Sycami'nus (*sukaminos*). See *Morus nigra.*

Sy'ce (*suke*). Ficus; Ficus carica.

Sycea, sis'e-ah (*sukee*). Ficus.

Sycephalus, se-sef'al-us (*sy, sym, kephale,* head). A monster having two heads united together.

Sycion, sis'e-on (*sukion*). A decoction of dried figs.

Sycios angulatus, sis'e-os an-gu-lat'us (*sikuos,* a gourd). *One-seeded star cucumber, Wild bryony.* The roots and seeds are bitter, purgative, and diuretic; used in dropsy in the same cases as bryony.

Sycites, sis-e'tees (*suke,* a fig). Made of figs. See *Catorchites.*

Sycoma, sik-o'mah (*syce, oma*). Ficus. Wart-like growth on soft parts, as the tongue, genital organs, eyelids, etc.

Sycosis, si-ko'sis (*sukosis*). A tumor of the shape of a fig; also a fungous ulcer, the fungous growth resembling the pulp of the fig. See *Mentagraphyte* and *Ficus.* Trachoma, formerly so called. Term applied to several skin diseases, as acne mentagra, lichen of the chin, follicular inflammation of the beard or other parts of the face. **S. bar'bæ** or **non-parasit'ica** affects hairy parts of the face. Lesions are papular, tubercular, or pustular, and perforated by hairs, the inflammation being perifollicular. **S. contagio'sa** or **parasit'ica,** *Tinea sycosis, Tinea trichophytina barbæ, Barber's itch;* contagious follicular inflammation of hairy parts of the face and neck, caused by development of trichophyton tonsurans.

Syd'enham's chore'a. Ordinary chorea. **S. laud'anum,** vinum opii.

Syderatio, sid-er-ah'she-o. Sideratio.

Sygig'noscism (*suggignosco,* to yield). Hypnotism.

Syko'sis. Sycosis.

Sykum, se'kum (*sukon*). Ficus.

Syl'labic ut'terance. Scanning speech with separation of syllables, seen in insular sclerosis.

Syl'lable-stum'bling. Difficulty in pronouncing many-syllabled words as a whole; a form of dysphasia.

Syllepsiologia, sil-leps-e-o-loj'e-ah (*syllepsis,* conception, *logos,* a description). *Syllepsology, Syllepsiology.* The doctrine of conception.

Syllepsis, sil-lep'sis (*sullepsis*). Conception.

Sylves'ter's meth'od. Means of maintaining artificial respiration: 1. Place patient on back with pad

between shoulders; 2, draw out tongue; 3, draw arms to side of head in extension for two seconds; 4, flex and adduct arms across chest, pressing firmly against the chest for two seconds; repeat. See *Drowning, resuscitation from.*

Syl'vian a'queduct. Aquæductus Sylvii. **S. ar'tery,** see *Cerebral arteries.* **S. fis'sure,** fissure of Sylvius. **S. fos'sa,** depression on external surface of cerebral hemispheres between arms of Sylvian fissure. It contains the island of Reil. **S. ven'tricle,** see *Ventricles of the brain.*

Sym, Syn (*sun*, with, together). Like the *cum, con, col, cor*, etc. of the Latin. A common prefix. Before *b, p, ph, ps*, and *m*, syn or xyn is changed into sym or xym (com); before *c, ch, g, k*, and *x*, into syn or xyn (con); before *l*, into syl or xyl (col); before *r*, into syr or xyr (cor); and before *s*, into sy or xy and sys (co and cos).

Symbiosis, sim-be-o'sis (*sym, bioo*, to live). Coexistence of individuals or organisms.

Symbiotic, sim-be-ot'ik (*sym, bioo*, to live). Parasitic.

Symblepharon, sim-blef'ar-on (*sym, blepharon*). Symblepharosis. See *Ankyloblepharon.*

Symblepharosis, sim-blef-ar-o'sis (*sym, blepharon*, an eyelid). *Symblepharon.* Preternatural adhesion between the eyelids, and especially between the upper eyelid and globe of the eye. Ankyloblepharon.

Sym'bol (*symbolon*, a sign). *Character.* A sign or representation of something else.

The following are the symbols commonly used in prescriptions:

℞, Recipe. See *R.*
gr., *Granum*, a grain.
℈, *Scrupulus* or *scrupulum*, a scruple.
ʒ, *Drachma*, a drachm.
℥, *Uncia*, an ounce.
℔, *Libra*, a pound.
lb, *Libræ*, pounds.
♏, *Minimum*, a minim.
fʒ, *Fluidrachma*, a fluidrachm.
f℥, *Fluiduncia*, a fluidounce.
O, *Octarius*, a pint.
C, *Congius*, a gallon. See *Abbreviations* and *Weights and Measures.*

Symbole, sim'bo-la (*sym, ballo*, to throw). Commissure.

Symboleusis, sim-bo-lu'sis (*sumbole*, a bringing together). Consultation.

Sym'bolism. Form of delusional insanity in which the patient interprets everything he sees as a symbol of his own feelings or notions. Sympathy.

Symbolismus, sim-bo-liz'mus (*symbolum*). Symbolism. Sympathy.

Symbolizatio, sim-bol-iz-ah'she-o. Sympathy.

Sym'bolizing insan'ity. Symbolism.

Symbologica, sim-bo-loj'ik-ah (*sumbolon*, a sign, *logos*, a treatise). Symptomatology.

Symbology, sim-bol'o-je (*symbolum, logos*, a description). Symptomatology.

Symbolum, sim'bo-lum (*simbolon*). Symbol; sympathy.

Symeles, sim'el-ees (*sym, melos*, limb). More correctly, Symmeles. See *Symmeles.*

Syme's amputa'tion. See *Amputation.*

Symmeles, sim'mel-ees (*sym, melos*, limb). *Monopus.* Genus of monsters whose extremities are joined together, the pelvis and lower limbs being imperfectly developed, with partial or entire fusion of the latter and twisting of the lower extremity in its various parts. *Sirens.* The monster is called *Symmelus.*

Symmetria, sim-met're-ah. Symmetry.

Symmet'rical. Epithet given to those parts of the body which, if seated on the median line, may be divided into two equal and perfectly like halves; or which, if situate the one to the right, the other to the left of this line, have a similar conformation and a perfectly analogous arrangement. **S. diseases,** see *Symmetry.* **S. gan'grene,** see *Raynaud's disease.*

Sym'metry (*sym, metron*, measure). Regularity in form observed in many parts situate on the median line, and also the resemblance which exists between many organs situate on each side of the median line—*Bilateral symmetry.* Bichat first noticed that this symmetry was confined to the organs of animal life, as the head, brain, spine, organs of sense, locomotion, etc. It has been affirmed to be a law of the animal economy that, owing to symmetry of nutrition, when uninfluenced by disturbing agents, all general or constitutional diseases affect equally and similarly the corresponding parts of the two sides of the body. This has been called the *Symmetry of diseases*, and the resulting diseases are said to be symmetrical. **S. of diseases,** see *Diseases.* **S. of nutri'tion,** see *Symmetry.*

Symparateresis, sim-par-at-er-a'sis (*sym, parateresis*, the act of observing). Observation; close attention.

Sympasma, sim-paz'mah (*sym, passo*, to sprinkle). Catapasma.

Sympathesis, sim-path-a'sis. Sympathy.

Sympathet'ic. Depending on sympathy. Sympathetic affections of an organ are those morbid phenomena that supervene without any morbific cause, acting directly and by the reaction of another organ primarily affected. Thus, itching of the nose is a sympathetic affection, produced by irritation in the intestinal canal. The epithet sympathetic is given to different nerves. See *Trisplanchnic, Pneumogastric*, and *Facial.* **S. an'thrax,** *Black-leg, Quarter-evil*; disease of cattle caused by motile, rod-shaped micro-organisms; usually fatal; causes tumor of the extremities from hemorrhagic effusion. **S. bu'bo,** see *Bubo, simple.* **S. gan'glia,** see *Trisplanchnic nerve.* **S., great,** trisplanchnic nerve. **S. inflamma'tion,** inflammation of any part or organ, occurring as if by sympathy with a similar morbid condition in any other part or organ. **S. insan'ity,** mental aberration occurring in sympathy with the disease of some other organ not physiologically associated with the brain. **S., mid'dle,** pneumogastric. **S. nerve,** trisplanchnic nerve. **S. ophthal'mia,** inflammation of a sound eye due to injury or disease of its fellow. **S. pow'der,** *Pulvis sympatheticus*, or *Powder of sympathy*, of Sir Kenelme Digby; composed of calcined sulphate of iron prepared in a particular manner; long supposed to be able to cure a wound if applied to the weapon that inflicted it, or even to a portion of the bloody clothes. **S. sali'va,** that produced by the irritation of a sympathetic nerve. **S. vom'iting** or **morn'ing sick'ness,** that sometimes seen in the husband of a pregnant woman.

Sympathet'icus mi'nor. Facial nerve.

Sympathetismus, sim-path-et-iz'mus. Sympathy.

Sympathia, sim-path-e'ah. Sympathy; consent of parts.

Sympathicus, sim-path'ik-us. Sympathetic.

Sym'pathy (*sym, pathos*, suffering). Connection existing between the action of two or more organs more or less distant from each other, so that the affection of the first is transmitted secondarily to the others, or to one of the others, by means unknown. Knowledge of the particular sympathy between different organs throws light on the etiology of diseases, their seat, and the particular organs toward which our therapeutical means should be directed. See *Irritation. Sympathy of continuity* is seen in the case of a continuous membrane, as in the action of demulcents in catarrh; *Sympathy of contiguity* in the case of parts that are near, as in the action of aloes in amenorrhœa; and *Remote sympathy* concerns organs that are at a distance from the part impressed, as in the case of tetanus from an injury. **S., cure by,** mode of treatment, at one time prevalent, based on the idea that a mysterious consent exists between parts of the body and certain remedial agents. See *Sympathetic powder* and *Trial by bier-right.*

Sympepsis, sim-pep'sis (*sym, pepsis*, coction, digestion). Coction.

Sympexis, sim-peks'is (*sumpexis*). Concretion, as occasionally met with in the blood-vessels of some of the glands of the body.

Symph'ia (*sumphuia*). Symphysis.

Symphora, sim'fo-rah (*sym, phero*, to carry). Congestion.

Symphorema, sim-fo-ra'mah. Congestion.

Symphoresis, sim-fo-ra'sis (*sumphoresis*). Congestion.

Symphoret'icus. Congested.

Symphoricarpus racemosus, sim-fo-re-kar'pus ras-e-mo'sus (*sumphoreo*, to bear together, *karpos*, fruit). *Snowberry;* ord. Caprifoliaceæ. Root is tonic and astringent, and has been used in ague and by the Indians in syphilis.

Symphyocephalus, sim-fe-o-sef'al-us (*sym, phuo*, to grow, united together, *kephale*, head). Monstrosity in which twins are united by the head.

Symphy'seal an'gle. Formed by union of line of lower border of inferior maxillary bone and that from point of chin to lower incisors.

Symphyseotomy, sim-fis-e-ot'o-me (*symphysis, tome*, incision). *Symphysiotomy, Synchondrotomy, Sigaultian operation* or *section.* Operation of section of the symphysis pubis, performed with the view of augmenting the diameter of the pelvis to facilitate delivery in certain cases of faulty conformation of that cavity, with wedging of the head of the child therein. As soon as the fibrous parts which hold the bones together are divided, the latter separate to a certain distance from each other, and delivery may be accomplished.

Symphysia, sim-fis'e-ah (*sumphuo*, to grow together). A malformation consisting in the union of parts usually divided.

Symphysion, sim-fis'e-on. The central point of the external alveolar border of the inferior maxilla.

Symphysiotomia, sim-fis-e-o-tom'e-ah. Symphyseotomy.

Symphysiotomy, sim-fis-e-ot'o-me. Symphyseotomy.

Symphysis, sim'fis-is (*sym, phuo*, to grow). Union of bones; the bond of such union; the aggregate of means used for retaining bones *in situ* in the articulations. It has, however, been more particularly appropriated to certain articulations, as to the symphysis pubis, sacro-iliac symphysis, etc. See *Monster.* **S. cartilagin'ea**, synchondrosis. **S. of jaw**, S. menti. **S. ligamento'sa**, syndesmosis. **S. men'ti**, see *Maxillary bone, inferior.* **S. os'sium muscula'ris**, syssarcosis. **S. pu'bis**, pubic articulation. **S. sacrococcyge'a**, articulation between sacrum and coccyx.

Symphysodactylia, sim-fiz-o-dak-til'e-ah (*symphysis, daktulos*, finger). Abnormal union of the fingers.

Symphysopsia, sim-fis-op'se-ah (*symphysis, ops*, eye). A monstrous fusion of the two eyes into one.

Symphysoskelia, sim-fis-o-skel'e-ah (*symphysis, skelos*, leg). *Siren.* Monster with fusion of the lower extremities.

Symphysotomy, sim-fis-ot'o-me. Symphyseotomy.

Symphytos, sim'fit-os (*sumphutos*, grown or produced with). Hereditary.

Symphytum, sim'fit-um (*sumphuton*). *S. officinale* or *album* or *Bohemicum, Consolida major, Comfrey*, ord. Boraginaceæ. The roots of this European plant are very mucilaginous, and are employed as emollients, in decoction, in hæmoptysis, dysentery, chronic diarrhœa, etc. Also Solidago virgaurea. **S. min'imum**, bellis. **S. mi'nus**, prunella. **S. petræ'um**, *Coris Monspeliensis, Montpelier coris;* an intensely bitter and nauseous plant, said to have been useful in syphilis. See also *Sanicula.*

Sympiesis, sim-pi-a'sis (*sym, piesis*, pressing). A squeezing together of parts.

Sympiesometer, sim-pi-es-om'e-tur (*sympiesis, metron*, measure). Instrument for measuring pressure.

Symplocarpus angustispatha, sim-plo-kar'pus angus-te-spath'ah (*sumploke*, connection, *karpos*, fruit, from the coalescing ovaries). Dracontium angustispatha. **S. fœ'tidus**, Dracontium fœtidum.

Sympodia, sim-po'de-ah (*sym, pous*, foot). *Sympus, Siren.* Monstrosity in which there is coalescence of the lower extremities and one foot recognizable, *Sympus monopus;* if there is entire absence of feet, it is called *Sympus apus.*

Symptom, sim'tum (*sym, pipto*, to fall). Any change perceptible to the senses in any organ or function, connected with morbific influence. The term *Symptoms of symptoms* has been used for the effects which result from the symptoms of a disease, which effects are not essentially connected with the disease itself. Thus, the debility arising from the frequency of evacuations in dysentery is a symptom of symptoms. Symptom at one time was generally used in the same sense as sign, but the former signifies a functional or vital phenomenon of disease, while the latter is applied to that which is more directly physical; hence the expressions functional or vital phenomena or symptoms, in contradistinction to the physical signs afforded by auscultation, percussion, etc. See *Sign.*

Symptoma, sim-to'mah. Symptom. **S. turpitu'dinis**, nymphomania.

Symptomatic, sim-to-mat'ik (*sumptomatikos*). Relating or appertaining to symptoms or signs; that which is a symptom of some other affection, as a symptomatic disease, in opposition to idiopathic, or a symptomatic fever.

Symptomatography, sim-to-ma-tog'ra-fe (*symptoma, graphe*, description). Semeiography.

Symptomatology, sim-to-ma-tol'o-je (*symptoma, logos*, treatise). The branch of pathology the object of which is the observation and knowledge of symptoms.

Symptomiatria, sim-to-me-at-re'ah (*symptom, iatreia*, a healing). Homœopathy.

Symptosis, sim-to'sis (*sym, pipto*, to fall). Depression or collapse, emaciation or atrophy, either of the whole body or of a part.

Sympus, sim'pus. Sympodia. **S. a'pus**, see *Sympodia.* **S. mon'opus**, see *Sympodia.*

Syn. As a prefix, with.

Synærema, sin-e'ra-mah (*sunairema*). Corrugation.

Synæsthesia, sin-ees-the'ze-ah (*syn, aisthesis*, sensation). Location of a sensation at one part of the body when a distant part is irritated.

Synætion, sin-e'te-on (*syn, aitia*, cause). A cause which co-operates with another in the production of disease.

Synago'ge (*sunago*, to bring together). Contraction.

Synalgia, sin-al'je-ah (*syn, aisthesis*, sensation). Pain felt in part of body distant from part injured or irritated.

Synanche, sin-an'ka. Cynanche; cynanche tonsillaris.

Synaphymenitis, sin-af-e-men-e'tis (*sunaphe*, conjunction, *humen*, membrane, *itis*). See *Ophthalmia.*

Synaptase, sin-ap'taze (*syn, aptein*, to join; with amygdalin it forms hydrocyanic acid). A ferment found in the pulp of bitter almonds. See *Amygdalin* and *Emulsin.*

Synarthrodia, sin-ar-thro'de-ah. Synarthrosis.

Synarthrodial, sin-ar-thro'de-al. Belonging to synarthrosis, as synarthrodial articulation. **S. diarthro'sis**, *Amphiarthrosis*, joint with fibro-cartilaginous or fibrous tissue between the extremities of bones, or joint with short ligaments, but without fibrous or fibro-cartilaginous tissue between the bones.

Synarthrosis, sin-ar-thro'sis (*syn, arthrosis*, articulation). Immovable articulation. Synarthrosis includes three species—suture, harmony, and gomphosis. See *Articulations.*

Synathroisis, sin-ath-ro-i'sis (*syn, athroo*, to collect). Congestion.

Synathroismus, sin-ath-ro-iz'mus (same etymon). Congestion.

Syncanthus, sin-kan'thus (*syn, kanthos*, corner of the eye). Morbid adhesion between the globe of the eye and the orbit.

Syncephalus, sin-sef'al-us (*syn, kephale*, head). Double monster with fused heads.

Syncheiral, sin-ki'ral (*syn, cheir*, hand). Term used to denote movement in animals where both of a pair of feet are moved together.

Synchilia, sin-kil'e-ah (*syn, cheilos*, lip). Atresia of the lips.

Synchisis, sin'kis-is. Confusio.

Synchiton, sin'kit-on (*syn, chiton,* coat). Conjunctiva.

Synchondrosis, sin-kon-dro'sis (*syn, chondros,* cartilage, *osis*). Union or articulation of bones by means of cartilages; as the articulations of the ribs with the sternum, by means of their cartilages of prolongation. **S. sacrococcyge'a** that between the sacrum and coccyx.

Synchondrotomy, sin-kon-drot'o-me (*syn, chondros,* cartilage, *tome,* incision). Division of interosseous cartilage, as of the symphysis pubis. Symphyseotomy.

Synchronical, sin-kron'ik-al. Synchronous.

Synchronism, sin'kro-nism (*syn, chronos,* time). State of being synchronous.

Synchronius, sin-kro'ne-us. Synchronous.

Synchronous, sin'kro-nus (*syn, chronos,* time). *Isochronous.* Occurring at the same time; thus the pulsations of an artery are synchronous with those of the heart.

Syn'chronus (*sunchronos*). Synchronous.

Synchysis, sin'kis-is (*syn, chuo,* to pour). Confusio. **S. scin'tillans,** confusio. **S., spark'ling,** confusio.

Synchytophlogia, sin-kit-o-flo'je-ah (*sunchusis,* mixing together, *phlego,* to burn). Confluent small-pox.

Synciput, sin'se-put. Sinciput.

Syncleisis, sin-kli'sis (*syn, kleio,* to close). Occlusion.

Synclinal, sin-kli'nal (*syn, klino,* to slant). Inclining toward each other.

Syn'clisis. Synclitism.

Synclitic, sin-klit'ik. Relating to synclitism. See *Synclitism* and *Enclitic.*

Synclitism, sin'klit-ism (*sun,* together, *klitos,* inclined). Synclitic movement of the fœtal head; parallelism of the plane of the child's head, in a natural presentation, with the planes of the pelvis and vagina.

Synclonesis, sin-klo-na'sis (*sunklonesis,* act of shaking together). Synclonus.

Synclonus, sin'klo-nus (*sunkloneo,* to shake together). *Synclonesis.* Tremulous, simultaneous, and chronic agitation of various muscles, especially when excited by the will; clonici universales; clonus; also general spasm, spasmus universalis. See *Tremor, Chorea,* etc. **S. ballis'mus,** paralysis agitans. **S. beribe'ria,** beriberi. **S. chore'a,** chorea. **S. In'dicus,** beriberi. **S. rapha'nia,** raphania. **S. sal'tans,** chorea. **S. trem'or,** paralysis agitans; tremor.

Syncomistus, sin-ko-mis'tus (*syn, komizo,* to bring). Bread of the whole wheat or of the unsifted meal. Household bread. Also a cataplasm made of the same.

Syncopal, sin'ko-pal. Relating or appertaining to syncope, as syncopal fever, a pernicious intermittent characterized by repeated attacks of syncope.

Syncope, sin'ko-pe (*syn, kopto,* to fall, to fall down). *Asphyxia, Swoon, Swooning, Fainting, Fainting fit, Faintness, Exolution.* Complete and, commonly, sudden loss of sensation and motion, with considerable diminution or entire suspension of the pulsations of the heart and the respiratory movements. Syncope is commonly an affection of no consequence; sometimes it is an index of diseased heart. Placing the patient in the horizontal posture, sprinkling cold water over the face, and the application of volatile substances to the nose are all that will be required during the fit. See *Asphyxia* and *Suffocation.* An approach to this condition is termed faintishness, and the person is said to be faint. **S. an'gens,** angina pectoris. **S. angino'sa,** angina pectoris.

Syncop'tic or **Syncopticus,** sin-kop'tik-us (*sunkoptikos*). Syncopal.

Syncoptus, sin-kop'tus. Syncopal.

Syncranius, sin-kran'e-us (*syn, kranion,* skull). Superior maxillary bone.

Syncretism, sin'kre-tizm (*syn, kretizo,* to lie or deceive). Blending.

Syncrisis, sin'kris-is (*syn, krino,* to separate). Coagulation of liquids.

Syncritica, sin-krit'ik-ah (*sunkrino,* to put together). Medicines esteemed proper for inspissating the humors.

Syncritium, sin-krit'e-um. Tissue with protoplasm and nuclei, without cell-walls.

Syndactylus, sin-dak'til-us (*syn, daktulos,* finger). A monster whose fingers are not separated from one another.

Syndectomy, sin-dek'to-me (*sundeo,* to bind together, *tome,* excision). *Peritomy, Circumcision of the cornea.* An operation designed to cut off the supply of blood from the cornea by a division and part removal not only of the conjunctival but also of the subconjunctival vessels. It is resorted to in pannus.

Syndelphus, sin-del'fus (*syn, adelphos,* brother). Single-headed double monster with fused thoraces and single pelvis.

Syndesmectopia, sin-dez-mek-top'e-ah (*sundesmos,* ligament, *ektopos,* out of place). Displacement of ligament.

Syndesmitis, sin-dez-me'tis (*syndesmos,* ligament, *itis*). Inflammation of articular ligaments.

Syndesmo-arytenoïdeus, sin-dez'mo-ar-it-en-o-id'-a-us (*syndesmos,* ligament, *arytenoïdeus*). Anomalous variety of lateral crico-arytenoid muscle arising from a tendon in common with the inferior crico-arytenoid.

Syndesmography, sin-dez-mog'ra-fe (*syndesmus, graphe,* description). A description of the ligaments. The part of anatomy which describes the ligaments.

Syndesmology, sin-dez-mol'o-je (*syndesmus, logos,* treatise, discourse). A treatise on the ligaments.

Syndesmopharyngeus, sin-dez-mo-far-in-ja'us. A fasciculus of the constrictor pharyngis superior.

Syndesmosis, sin-dez-mo'sis (*syndesmus, osis*). The articulation of two or more bones by means of ligament, as of the radius with the ulna.

Syndesmothyroïdeus, sin-dez-mo-thir-o-id'a-us (*syndesmos, thyroïdeus*). Muscle formed by union of superior and inferior portions of the thyro-arytenoid inserted into the vocal cords.

Syndesmotomy, sin-dez-mot'o-me (*syndesmus, temno,* to cut or dissect). Dissection of the ligaments.

Syndesmus, sin-dez'mus (*sundesmos*). Bandage; ligament.

Syndrome, sin'drome (*syn, dromos,* course). *Concourse.* The union of symptoms which takes place in diseases; *S. plethorica,* for example, means the aggregate of symptoms produced by plethora.

Syndyasmus, sin-de-as'mus (*syn, duo,* two). Coition.

Syneches, sin'ek-ees (*suneches,* continuous). See *Continued fever.*

Synechia, sin-ek-e'ah (*syn, echo,* to hold). Adhesion between the iris and transparent cornea, or between the iris and crystalline lens. The former is called synechia anterior; the latter, S. posterior, ptosis diplopia. If exudations of plastic lymph from the edge of the pupil are thrown out, so as to fringe the whole circumference, tying it down to the capsule of the lens, the centre of the pupil remaining clear, the condition is called circular or annular synechia or exclusion of the pupil. When the pupil is occluded by a thick nodule of exudation, it is called occlusion of the pupil.

Synencephalus, sin-en-sef'al-us. Double monster with fused heads.

Synenergia, sin-en-er-je'ah. Synergy.

Synergi'a. Synergy.

Synergic, sin-er'jik (*syn, ergon,* work). Working together, as muscles, remedies, etc.

Synergist, sin'er-gist (*syn, ergon,* work). Remedy acting to assist another.

Synergy, sin'er-je (*syn, ergon,* work). A correlation or concourse of action between different organs in health, and, according to some, in disease.

Synesis, sin'es-is (*sunesis*). Intellect.

Syneurosis, sin-u-ro'sis (*syn, neuron,* sinew). See *Syndesmosis.*

Synezisis, sin-ez-e'sis (*syn, izo,* to sit). A falling together. **S. pupil'læ,** closure or occlusion or obliteration of the pupil. Sometimes a faulty conformation, depending upon the continued existence of the membrana pupillaris or the absence of the pupil. At

other times, owing to accident, it supervenes on violent ophthalmia or on the operation for cataract. Those affected are completely blind, the iris having no central aperture. Relief may sometimes be obtained by making an opening in the iris called an *operation for artificial pupil.*

Syngamus trachealis, sin'gam-us trak-e-al'is. Nematode worm found in the trachea of birds.

Syngenes, sin'jen-ees (*syn, gennao,* to beget). Hereditary.

Syn'genic (same etymon). Hereditary.

Syngenicus, sin-jen'ik-us. Congenital.

Syngignoscism, sin-gig'no-sizm (*syn, gignosko,* to know). Hypnotism.

Synhymensis, sin-hi-men'sis. Synymensis.

Synidrosis, sin-id-ro'sis (*syn, hidros,* sweat). Concurrent sweating.

Synimensis, sin-e-men'sis. Synymensis.

Synizesis, sin-e-za'sis. Restoration; cessation; subsidence; contraction of a canal or cavity. See *Synezisis.*

Synkineses, sin-kin-a'sees (*syn, kinesis,* movement). Associated movements of reflex origin. Involuntary movements of paralyzed parts. Motor disorders in muscles affected with spasm. Anomalous movements in muscles which are normally associated in action with affected muscles.

Synneurosis, sin-neu-ro'sis (*syn, neuron,* tendon, *osis*). Syndesmosis.

Synocha, sin'o-kah (*syn, echo,* to have or to hold). Inflammatory or dynamic fever. General inflammation. A species of continued fever characterized by increased heat; quick, strong, and hard pulse; urine high colored; disturbance of mind slight. **S. rheumat'ica,** acute rheumatism. **S. vacci'na,** cowpox.

Synochal, sin'o-kal. Relating to, or having the characters of, synocha.

Synochus, sin'o-kus (*sunochos,* continued). Continued fever, compounded of synocha and typhus: in its commencement often resembling the former, in its progress the latter; mixed fever, common continued fever, synochoid fever. See *Acmasticus, Continued fever, Fever,* and *Typhus.* **S. bilio'sa,** gastric fever; bilious fever. **S. catarrha'lis,** influenza. **S. ictero'des,** yellow fever. **S. impu'tris,** synocha. **S. milia'ria,** miliary fever. **S. varicel'la,** varicella.

Synolce, sin-ol'se (*syn, helko,* to draw). Spasm.

Synophthal'mia or **Synophthalmus,** sin-of-thal'-mus (*syn, ophthalmos,* eye). Monstrosity in which there is one orbital cavity. Cyclopia.

Synorchism, sin-or'kism (*syn, orchis,* testicle). State of fusion of the testicles.

Synoscheos, sin-os'ke-os (*syn, osche,* scrotum). Adhesion of the penis to the scrotum.

Synosteography, sin-os-te-og'raf-e (*syn, osteon,* a bone, *grapho,* to describe). The part of anatomy describing the joints.

Synosteology, syn-os-te-ol'o-je (*syn, osteon,* a bone, *logos,* a treatise). A treatise on the joints.

Synos'teophyte or **Synosteophytum,** sin-os-te-o-fe'-tum (*syn, osteon,* bone, *phuton,* growth). Congenital growth of bone.

Synosteosis, sin-os-te-o'sis (*syn, osteon,* bone, *osis*). *Synostosis.* Union by means of bone.

Synosteotomy, sin-os-te-ot'o-me (*syn, osteon,* bone, *tome,* incision). Dissection of joints.

Synostology, sin-os-tol'o-je (*syn, osteon,* bone, *logos,* treatise). Part of the science of medicine treating of joints.

Synostosis, sin-os-to'sis. See *Synosteosis.* Also the premature and abnormous obliteration of the sutures as a cause of deformity and irregularity of the human skull.

Synostotic, sin-os-to'tic. Relating to synostosis.

Synotis (sin-o'tis) or **Syno'tus** (*syn, ous,* an ear). Double monster, the second face of which is represented only by two ears close together or a double median ear; a form of otocephalus.

Synovia, sin-o've-ah (*syn, ovum,* an egg). A fluid resembling the white of egg, exhaled by the synovial membranes surrounding the movable articulations. It has been found to consist of water, albumin, salts, and fat. Its use is to lubricate the joints and the sheaths in which tendons play.

Synovial, sin-o've-al. Relating to synovia. **S. bur'sæ,** bursæ mucosæ. **S. cap'sules,** see *Membrane.* **S. cysts** include dropsies and enlargements of synovial sheaths, as from localized pressure, under which bursæ may also be newly formed; cystic transformation and dilatation from follicular obstruction. **S. fim'briæ,** S. fringes, S. ligaments, S. folds. **S. flu'id,** synovia. **S. folds,** folds of synovial membrane found in large joints. **S. fringes,** projections of synovial membranes into joints. **S. glands,** *Havers's glands;* secretory fringes which float in the interior of the synovial capsules; see *Capsules.* **S. mem'branes,** see *Membrane.* **S. sheath,** bursa-like fold between tendons and neighboring bony points. **S. vil'li,** S. fringes.

Synoviparous (si-no-vip'ar-us) **crypts.** In-dippings of synovial membranes.

Synovitis, sin-o-ve'tis (*synovia, itis*). Inflammation of the synovial membrane. When it affects the bursæ, it is sometimes called *bursitis.* When of strumous origin, it is often accompanied with gelatiniform degeneration of the synovial membrane, constituting *arthritis gelatinosa.* **S. hyperplas'tica,** S. with villous outgrowths. **S. rheumatisma'lis,** acute rheumatism.

Syntasis, sin'tas-is (*syn, teino,* to stretch or strain). Tension of parts.

Syntatic, sin-tat'ik (*syn, teino,* to stretch). Tonic.

Syntaxis, sin-taks'is (*syn, tasso,* to put in order). Articulation; reduction; taxis. **S. serra'ta,** see *Suture.*

Syntecopyra, sin-te-cop'ir-ah (*suntexis,* wasting, *pur,* fever). Hectic fever.

Syntectycopyra, sin-tek-te-kop'ir-ah. Hectic fever.

Syntenosis, sin-ten-o'sis (*syn, tenon,* tendon, *osis*). A species of articulation in which two bones are joined by means of tendon, as the sesamoid bones with the toes, the patella with the tibia, etc.

Synteresis, sin-ter-a'sis (*syn, tereo,* to keep). Prophylaxis.

Synteret'ic or **Synteret'icus** (*sunteretikos*). Prophylactic.

Syntexis, sin-teks'is (*suntexis*). Colliquation; wasting of the body; consumption. See *Syntasis.*

Synthena, sin-tha'nah. A species of epilepsy accompanied by cardialgia and tormina.

Synthermal, sin-thur'mal (*syn, therme,* heat). Of equal temperature; isothermal.

Synthesis, sin'thes-is (*syn, tithemi,* to place). Composition or putting together. A surgical operation consisting in uniting divided parts and approximating those separated or distant from each other. Synthesis of continuity means the union of the edges of a wound or the approximation of the extremities of a fractured bone. Synthesis of contiguity is the reduction of displaced organs, as in hernia and luxations. Also, as in chemistry, the formation of a more complex body by the union of simpler bodies. See *Composition.*

Synthet'ic. Pertaining to synthesis.

Syn'thetism. The aggregate of operations and means for reducing a fracture and maintaining it reduced, comprising extension, counter-extension, coaptation, and bandaging.

Syn'tonin, (*syn, tonos,* muscle). See *Fibrin.*

Syntrim'ma (*syn, tribo,* to rub). Comminution; trituration.

Syntrip'sis (*suntripsis*). Comminution; trituration.

Syn'trophus (*syn, trepho,* to nourish). Term applied to a disease which has grown up with an individual or been connate with him.

Synulo'sis (*syn, ouloo,* to cicatrize). Cicatrization.

Synulo'tic or **Synulo'tica** (*sunoulotica*). Remedies supposed to be capable of producing cicatrization.

Synu'sia (*sunousia*). Coition.

Synymen'sis (*syn, humen,* membrane). Union of bones by membrane, as in the case of the bones of the head in the fœtus; syndesmosis.

Syphilel'cos or **Syphilel'cus** (*syphilis, helkos,* an ulcer). Syphilitic ulceration; presence of a syphilitic chancre.

Syphilelco'sis (*syphilelcosis*). Process of syphilitic ulceration.

Syphilides, sif'il-eeds. *Syphiloderms.* Cutaneous eruptions that appertain to constitutional syphilis. The principal varieties are syphilitic maculæ or pigmentary stains, exanthematous eruptions, and a variety of papular, vesicular, and other syphilodermata.

The following is a classification of the conditions included under this head (Cornil):

1. Erythematous syphilides (roseola).	Diffused; Macular; Papular.
2. Papular syphilides.	Small papules (papular or papulo granular syphilide); Miliary syphilide; Conical, lichen-like syphilide; Large papules (patches of papulo-lenticular syphilide); Papulo-tuberculous; Papulo-squamous.
3. Vesicular syphilides.	Varicelliform; Eczemiform; Herpetiform.
4. Pustular syphilides.	Acneiform; Impetiginous; Ecthymatous (sometimes superficial and precocious, sometimes late and ulcerated)—ulcerous ecthyma.
5. Bullous syphilides.	Pemphigus; Rupia.
6. Gummous and tubercular syphilides.	

In this classification there is indicated the gradual passage of the superficial lesions of the early period of secondary symptoms, the roseola and the papules, into the deeper and later lesions of the second period, such as ecthyma, and finally into the rupia, tubercles, and gummata of the third period.

Syphilidia'ter (*syphilis, iatros,* physician). One who occupies himself in treating syphilis.

Syphilidoch'thus (*syphilis, ochthe,* rising ground) **dissemina'tus.** Tubercular syphilitic eruption. **S. ro'dens,** ulcerated syphilitic tubercle.

Syphilidocolpi'tis (*syphilis, kolpos,* vagina). Syphilitic vaginitis.

Syphilidog'raphy. Syphilography.

Syphilidol'ogy. Syphilology.

Syphilidoma'nia. Syphilomania.

Syphilidopho'bia. Syphilophobia.

Syphilidophthal'mia (*syphilis, ophthalmos,* eye). Syphilitic inflammation of the eye.

Syphiline, sif'il-een (*syphilis*). A term proposed for the supposed specific zymotic principle by which syphilis is propagated.

Syphilinum, sif-il-e'num. Homœopathic remedy said to consist of the virus of syphilis and milk-sugar.

Syphilion'thus (*syphilis, ionthos,* pustular eruption on the face). Scaly, copper-colored eruption of the face, due to syphilis.

Syphilipho'bia (*syphilis, phobos,* dread). Morbid dread of syphilis, giving rise to fancied symptoms of the disease; a form of hypochondriasis.

Syphilis, sif'il-is (Etymology unknown. Some consider it to proceed from *sun,* with, and *phileo,* to love, and others, with more probability, from *siphlos*—formed, by contraction, from *sipalos*—reproach, etc.). *Venereal, Venereal disease, Pox, French pox, French crust, French distemper, Foul* or *Bad disease.* An infectious disease communicable by coition, or by the contact of parts that are only lined with a thin epidermis, as the lips, nipple, etc. It generally makes its first appearance by a hard chancre, the latter being known as the primary or initial lesion, and there are other symptoms which are secondary or constitutional. These are ulcers in the throat, copper-colored blotches on the skin, pains in the bones, nodes, etc.: the last are sometimes termed tertiary phenomena. Hence the terms Primary syphilis, S. primigenia; Secondary syphilis, S. secundaria, constitutional syphilis; Tertiary syphilis, and S. inveterata are applied to the disease according to the stage of the syphilitic infection. It is not yet established that syphilis is due to the influence of a micro-organism. Syphilis may be acquired or hereditary. Primary syphilis includes the incubatory period from the time of infection to the appearance of the initial lesion, two to three weeks, but this may be a longer or shorter period. Then comes a second period of incubation, of forty days or more, before the appearance of constitutional symptoms. During the primary stage the chancre occurs and the glands and lymphatics become indurated. In the second stage—secondary syphilis—constitutional symptoms are developed, as exhibited in lesions of the skin and mucous membranes (see *Syphilides*), affections of the eye and of the lymphatic glands. Tertiary syphilis does not occur frequently at the present day, on account of the successful treatment of the first and second stages. The tertiary symptoms are various ulcerations, gummatous, tubercular, and other conditions (see *Syphilides*), affections of the nervous system and the visceral organs. **S. cor'puscles,** microscopic bodies said to have been noticed by some observers in the blood of syphilitic patients. **S. hæmorrhag'ica neonato'rum,** a rare form of syphilis of the newborn, attended with hemorrhages. **S. hereditа'ria,** hereditary syphilis, constitutional syphilis of the child, derived during fœtal life from its parent. **S. In'dica,** frambœsia. **S. ingen'ita,** hereditary syphilis. **S. invetera'ta,** see *Syphilis.* **S., pri'mary,** see *Syphilis.* **S. primigen'ia,** see *Syphilis.* **S., prim'itive,** see *Syphilis.* **S. pseudosyph'ilis,** a term given to ulcers or other affections resembling syphilis, but indeterminate in character, the symptoms being irregular in appearance, and usually yielding spontaneously or under the use of tonics, change of air, etc. Sivvens, radezyge, etc. have been referred to this head. **S., vac'cinal,** vaccino-syphilis.

Syphilis'mus. Syphilis.

Syphilit'ic. Belonging or relating to or affected with syphilis. **S. fe'ver,** febrile manifestation of the first constitutional effects of syphilis.

Syphiliza'tion. Saturation of the system by inoculation with the matter of syphilis. It has been used as a curative procedure in syphilis, as well as a preventive of that disease, and for the cure of other cachexiæ, as cancer.

Syphilized, sif'il-ized. Affected with syphilis.

Syphiloceles, sif-il-o-se'lees (*syphilis, kelis,* stain). Syphilitic patches on the skin.

Syphiloderma, sif-il-o-dur'mah (*syphilis, derma,* skin). Cutaneous eruption of a syphilitic character.

Syphilogeny, sif-il-oj'en-e (*syphilis, gennao,* to generate). The origin or generation of syphilis.

Syphilographer, sif-il-og'raf-er (*syphilis, grapho,* to describe). A writer on syphilis.

Syphilography, sif-il-og'ra-fe (*syphilis, grapho,* to describe). A description of syphilis.

Syphiloid, sif'il-oid (*syphilis, eidos,* resemblance). Resembling syphilis, as a syphiloid affection.

Syphilolepis, sif-il-ol'ep-is (*syphilis, lepis,* attack). A scaly eruption due to syphilis. **S. gutta'ta,** papulosquamous eruption due to syphilis, looking like drops. **S. palma'ris,** papulosquamous syphilis occurring on the palms.

Syphilology, sif-il-ol'o-je (*syphilis, logos,* discourse). The doctrine of syphilis and its management; a treatise on syphilis.

Syphiloma, sif-il-o'mah (*syphilis, oma*). A syphilitic new formation having a definite structure; gumma.

Syphilomania, sif-il-o-man'e-ah. *Noddle pox.* Syphiliphobia.

Syphilophlysis, sif-il-of-lis'is (*syphilis, phlusis,* eruption). Syphilitic eruption.

Syphilophobia, sif-il-o-fo'be-ah. Syphiliphobia.

Syphilophyma, sif-il-o-fe'mah (*syphilis, phuma,* growth). Syphilitic growth.

Syphilopsiloma, sif-il-o-sil-o'mah (*syphilis, psilos,* bare). Syphilitic alopecia.

Syphionthus, sif-e-on'thus (*syphilis, ionthus,* pustular eruption on the face). Syphilionthus.

Syphita, sif'it-ah. Somnambulism.

Syphon, si'fon. See *Siphon.*

Syphonoma, sif-on-o'mah. Cylindroma.

Syrigmophonia, sir-ig-mo-fo'ne-ah (*surigmos,* piping, *phone,* voice). A piping state of the voice.

Syrigmus, sir-ig'mus (*surigmos*). Tinnitus aurium.

Syringa, sir-in'gah (*syrinx*). Eustachian tube; fistula; syringe; trachea. **S. clysmat'ica,** syringe (clyster). **S. vulga'ris,** *Common lilac;* ord. Oleaceæ. The leaves and fruit are bitter and somewhat acrid, and have been used as tonics and antiperiodics.

Syringe, sir'inge (*surinx,* a pipe). Apparatus through which any liquor is injected. **S., clys'ter,** a syringe for administering clysters. **S., cup'ping,** artificial cupping apparatus.

Syringes aëriferi, sir-in'jees a-er-if'a-re (*syrinx*). See *Bronchia.*

Syringicus, si-rin'jik-us (*syrinx*). Fistulous.

Syringine, sir-in'jeen. Glucoside obtained from Syringa vulgaris.

Syringitis Eustachii, sir-in-je'tis u-stak'e-e (*syringa,* Eustachian tube, *itis*). Inflammation of the Eustachian tube.

Syringmus, sir-ing'mus (*surigmos,* piping sound). Tinnitus aurium.

Syringodes, sir-in-go'dees (*suringoʒes,* like a pipe). Fistulous.

Syringomeningocele, sir-in-go-men-in-go-se'le (Eng. sir-in-go-men-in'go-seel) (*surinx,* tube, *meninx,* membrane, *kele,* a tumor). Congenital tumor consisting of membranes and posterior wall of dilated central canal of spinal cord protruding through the spina bifida.

Syringomyelia, sir-in-go-me-el'e-ah (*syrinx, muelos,* marrow). Condition produced by dilatation of central canal of spinal cord with hypertrophy of neuroglia surrounding the central canal, neuralgic pains, muscular paralysis, etc.

Syringomyelitis, sir-in-go-me-el-e'tis (*surigx, muelos, itis*). Central myelitis producing softening and cavity-formation in the spinal cord.

Syringomyelocele, sir-in-go-me-el-o-se'le (Eng. sir-in-go-me-el'o-seel) (*syrinx, muelos,* marrow, *kele,* tumor). Tumor formed by protrusion of posterior wall of dilated central canal of the cord through spina bifida.

Syringomyelus, sir-in-go-me'el-us (*syrinx, muelos*). Monster having syringomyelocele.

Syrin'gotome (*surinx,* fistula, *tome,* incision). Instrument formerly used in the operation for fistula in ano. It is a bistoury concave at the edge, terminated by a long, flexible, probe-pointed stylet.

Syringotomy, sir-in-got'o-me. The operation for fistula in ano by incision.

Syrinx, sir'inks (*surinx*). Eustachian tube; fistula; syringe; trachea. **S. hi'era,** vertebral column.

Syrmaismus, sir-mase'mus (*surmaizo,* to evacuate). A gentle evacuation by vomiting or stool.

Syrup, sir'up (Arabic *sirup, sirab,* or *scharab,* a potion). *Syrupus.* Saturated solution of sugar in water, either simple or united with some vegetable or other principle. See *Syrupus simplex.* **S. of al'monds,** syrupus amygdalæ. **S., antiscorbu'tic,** syrupus antiscorbuticus. **S., aromat'ic,** syrupus aromaticus. **S. of asafœt'ida,** syrupus asafœtidæ. **S., balsam'ic,** syrupus Tolutanus. **S. of black'berry root,** syrupus rubi. **S. of buck'thorn,** syrupus rhamni. **S. of cap'illaire, com'mon,** syrupus simplex. **S. of cincho'na with wine,** syrupus de kinâ kinâ cum vino. **S. of cincho'nia,** syrupus cinchoniæ. **S. of cit'ric ac'id,** syrupus acidi citrici. **S. of clove July flower,** syrupus caryophylli rubri. **S. of clove pinks,** syrupus carophylli rubri. **S. of coch'ineal,** syrupus cocci. **S. of em'etine,** syrupus emetinæ. **S. of e her,** syrupus cum æthere sulphurico paratus. **S. of five roots,** syrupus e quinque radicibus. **S. of gar'lic,** syrupus allii. **S. of gin'ger,** syrupus zingiberis. **S. of gum ar'abic,** syrupus acaciæ. **S., hive,** syrupus scillæ compositus. **S. of hon'ey,** mellitum simplex. **S. of i'odide of i'ron,** liquor ferri iodidi. **S. of ipecacuan'ha,** syrupus ipecacuanhæ. **S. of jal'ap,** syrupus jalapæ. **S. of lactophos'phate of lime,** syrupus calcis lactophosphatis. **S. of lactuca'rium,** syrupus lactucarii. **S. of lem'on,** syrupus limonis. **S. of lime,** syrupus calcis. **S. of marsh'mallow,** syrupus althææ. **S. of mead'ow saf'fron,** syrupus colchici autumnalis. **S. of mor'phia, ac'etate of,** syrupus morphiæ acetatis. **S. of mor'phia, mu'riate of,** syrupus morphiæ muriatis. **S. of mug'wort, com'pound,** syrupus aromaticus. **S. of mul'berries,** syrupus mori. **S. of o'pium,** see *Syrupus papaveris.* **S. of or'ange-flow'ers,** syrupus aurantii florum. **S. of or'ange-juice,** see *Syrupus aurantii.* **S. of or'ange-peel,** syrupus aurantii. **S. of or'geat,** syrupus amygdalæ. **S. of phos'phate of i'ron,** see *Ferri phosphas.* **S. of phos'phate of i'ron, com'pound,** see *Ferri phosphas.* **S. of pop'pies,** syrupus papaveris. **S. of pop'py, red,** syrupus rhœados. **S. of qui'nia,** syrupus quiniæ. **S. of rhat'any,** syrupus krameriæ. **S. of rhu'barb,** syrupus rhei. **S. of rhu'barb, aromat'ic,** syrupus rhei aromaticus. **S. of rhu'barb, spiced,** syrupus rhei aromaticus. **S. of roses,** syrupus rosæ. **S. of roses, red,** syrupus rosæ gallicæ. **S. of saf'fron,** syrupus croci. **S. of sarsaparil'la,** syrupus sarsaparillæ. **S. of sarsaparil'la, com'pound,** see *Syrupus de sarsaparillâ et sennâ compositus.* **S. of sarsaparil'la, In'dian,** syrupus hemidesmi. **S. of sarsaparil'la and sen'na, com'pound,** syrupus de sarsaparillâ et sennâ compositus. **S. of scam'mony,** syrupus de scammonio. **S. of sen'eka,** syrupus senegæ. **S. of sen'na,** syrupus sennæ. **S., sim'ple,** syrupus simplex. **S. of squill, com'pound,** syrupus scillæ compositus. **S. of squills,** syrupus scillæ. **S. of suc'cory, com'pound,** syrupus de cichorio compositus. **S. of tar,** see *Pinus sylvestris.* **S. of tartar'ic a'cid,** syrupus acidi tartarici. **S. of Tolu',** syrupus tolutanus. **S. of vin'egar,** syrupus aceti. **S. of vi'olets,** syrupus violæ. **S. of wild cher'ry bark,** syrupus pruni Virginianæ.

Syru'pus. S. simplex. **S. aca'ciæ** (Ph. U. S.), syrup of gum arabic (mixture of fℨivss of mucilage of acacia in fℨxij of simple syrup, to make Oj); a good pectoral syrup; dose, fℨj–fℨiij. **S. ace'ti** or **ac'idi aceto'si,** *Syrup of vinegar* (aceti, Oiiss; sacch. purif., ℔iiiss); refrigerant and antiseptic; dose, fℨj–ij. **S. ac'idi ci'trici** (Ph. U. S.), *Syrup of citric acid* (acid. citric., gr. cl; spirit. limonis, ♏c; syrup., Oij; aquæ, ♏clx); virtues the same as those of the syrupus limonis. **S. ac'idi hydriod'ici** (Ph. U. S.), *Syrup of hydriodic acid* (iodin., gr. xcv; alcohol, fℨij; syrup, fℨiiss; sugar, ℨxj; spirit of orange, fℨj; distilled water, q. s. to make Oj); see *Hydriodic acid;* dose, ♏xx–xxx. **S. ac'idi tartar'ici** is similarly prepared. **S. cum æ'there sulphurico para'tus,** *Syrup of ether* (pure sugar, 1000 p.; distilled water, 500 p.; sulphuric ether, 48 p.); properties like those of ether. **S. al'lii** (Ph. U. S.), *Syrup of garlic* (allii recent., ℨvij; acid. acet. dilut., fℨxviij; sacchar., ℨxxviij); use, same as that of garlic; dose, fℨj–fℨiv. **S. althæ'æ** (Ph. U. S.), *Syrup of marshmallow* (althææ, ℨj; sacchar., ℨxv; aquæ, q. s. to make Oj); emollient and demulcent; dose, fℨj–fℨiij. **S. amo'mi zingib'eris,** S. zingiberis. **S. amyg'dalæ** (Ph. U. S.), *Syrup of almonds, S. of orgeat, Orgeat* (amygdal. dulc., ℨv; amygdal. amar., ℨiss; aurant. flor., ℨiiss; sacchar., ℨxxv; aquæ, q. s. to make Oij); demulcent. **S. anticauso'dicus,** see *Anticausodic.* **S. antiscorbu'ticus,** *Antiscorbutic syrup* (leaves of cochlearia, buckbean, watercresses, horseradish root, and bitter oranges, each ℔j; cinnamon, ℨiss; white wine, ℔iv; sugar, ℔ij); antiscorbutic, alterative, tonic, stomachic, etc; dose, fℨj–ij. **S. de armora'ciâ compos'itus,** S. antiscorbuticus. **S. aromat'icus,** *Aromatic syrup, Compound syrup of mugwort* (tops of Artemisia vulgaris, ℨvj; inula root, ligusticum levisticum, and fennel, each ℨss; pennyroyal, catmint, savine leaves, each ℨvj; marjoram, hyssop, pyrethrum, rue, basil, each ℨiij; aniseed and cinnamon, each ℨix; hydromel, ℔xviij; sugar, ℔j); tonic, emmenagogue, etc. **S. de artemis'iâ compos'itus,** S. antiscorbuticus. **S. aspar'agi,** see *Asparagus.* **S. auran'tii** (Ph. U. S.), *Syrup of orange-peel* (aurant. dulc. cort., ℨiiss; alcohol, fℨiij; precipitated phosphate of calcium, ℨss; sugar, ℨxxviij;

water, q. s. to make Oij). In the Br. Pharmacopœia it is made by mixing tincture of orange-peel, fℨj, with syrup, fℨvij. Stomachic; dose, fʒj–ij. A syrup of orange-juice, orange sherbet, syrupus e succo aurantiorum, may be made by adding white sugar, ℔ij, to ℔j of the juice of oranges, strained and clarified. **S. auran'tii flo'rum** (Ph. U. S.), *S. aurantii floris, Syrup of orange-flowers* (aq. aurant. flor., Oss; sacchar., ℨxvj); dose, fʒj. **S. balsam'icus,** S. tolutanus. **S. cal'cii lactophospha'tis** (Ph. U. S.), *Syrup of lactophosphate of lime* (precipitated phosphate of calcium, ℨj; lactic acid, fʒixss; orange-flower water, fℨiij; sugar, ℨxxviij; hydrochloric acid, water of ammonia, water, each q. s. to make Oij); see *Calcis lactophosphas.* **S. cal'cis** (Ph. U. S.), *Syrup of lime, Saccharate* or *Sucrate of lime* (lime, ℨj; sugar, ℨvj; water, q. s. to make ℨxx; ℿxx equal fʒj of lime-water); proposed as a substitute for lime-water. **S. carophyl'li ru'bri,** *Syrup of clove July flower* or *clove pinks* (pelatorum dianth. caryoph., ℔j; aquæ bull., Oiv; sacch. purif., ℔vij); aromatic. **S. cas'siæ sen'næ,** S. sennæ. **S. chlora'lis** (chloral. hydrat., gr. lxxx; aquæ destillat., fℨiss; syrup., q. s.); dose, fʒj–ij; equivalent to gr. x or xx of chloral. **S. cincho'næ cum vi'no,** S. de kinâ kinâ cum vino. **S. cincho'niæ,** *Syrup of cinchonia* (simple syrup, ℔j; sulphate of cinchonia, gr. ix); six spoonfuls are commonly sufficient to arrest an intermittent. **S. ci'tri auran'tii,** S. aurantii. **S. ci'tri med'icæ,** S. limonum. **S. coc'ci,** *Syrup of cochineal* (cocc. cont., ℈iv; aq. destillat. bullient., Oj (imp. meas.); sacchar., ℔iij or q. s.; sp. rectificat., fℨiiss or q. s.); chiefly used as a coloring agent. **S. cum codei'nâ,** the French Codex has a syrup of codeia, made by dissolving codeine in distilled water and adding white sugar. **S. col'chici autumna'lis,** *S. colchici, Syrup of meadow saffron* (rad. colch. autumn. recent., ℨj; acidi acetosi, fℨxvj; sacch. pur., ℨxxvj); diuretic, antiarthritic; dose, fʒj–fℨss. **S. cor'ticis auran'tii,** S. aurantii. **S. c. citro'num suc'co,** S. limonum. **S. cro'ci,** *Syrup of saffron* (croci stigmat., ℨj; aquæ fervent., Oj; sacch. purif., ℔iiss); cardiac; chiefly used for coloring. **S. diaco'dion,** diacodium. **S. dian'thi caryophyl'li,** S. caryophylli rubri. **S. emeti'næ,** *Syrup of emetine* (syrup., ℔j; emetin., gr. xvj); in small doses, expectorant; in large doses, emetic. **S. empyreumat'icus,** molasses. **S. fer'ri bro'midi,** syrup of bromide of iron (iron wire, ℨiss; bromine, fʒix; sugar, ℨxxviij; distilled water, q. s. to make Oij); sedative tonic; used in chorea; dose, ℿxxx–fʒj. **S. fer'ri io'didi,** liquor ferri iodidi. **S. fer'ri phospha'tis,** see *Ferri phosphas.* **S. fer'ri, quini'næ et strychni'næ phospha'tum** (Ph. U. S.) (phosphate of iron, quinine, āā gr. cccc; strychnine, gr. xij; phosphoric acid, fℨiv; sugar, ℨxlij; distilled water, q. s. to make Oiij); in each fʒj of the syrup are phosphate of iron, gr. j; quinine, gr. j; strychnine, gr. $\frac{1}{32}$. **S. fus'cus,** molasses. **S. hemides'mi,** *Syrup of Indian sarsaparilla, Syrup of hemidesmus* (hemidesm., ℨiv; aq. destillat. bullient., Oj; sacchar. purificat., ℨxxviij; Ph. B.); weak preparation of hemidesmus; dose, fʒj. **S. hydrar'gyri,** syrupus de mercurio mediante gummi. **S. hypophosphi'tum** (Ph. U. S.), syrup of hypophosphites (hypophosphite of calcium, gr. dcc; hypophosphite of sodium, hypophosphite of potassium, āā gr. ccxl; citric acid, gr. xx; spirit of lemon, ℿl; sugar, ℨxxiv; water, q. s. to make Oij); dose, fʒj–ij. **S. hypophosphi'tum cum fer'ro** (Ph. U. S.), syrup of hypophosphites with iron (lactate of iron, gr. xcvi; syrup of hypophosphites, Oj); dose, fʒj–ij; in each fʒj are hypophosphites of calcium, gr. iij; hypophosphites of sodium and potassium, āā gr. j; lactate of iron, gr. $\frac{1}{4}$. **S. infusio'nis flo'rum caryophyllo'rum,** syrupus caryophylli rubri. **S. ipecacuan'hæ** (Ph. U. S.), *Syrup of ipecacuanha* (extract. ipecac. fluid., fℨij; syrup., fℨxxix). **S. de jalap'æ,** *Syrup of jalap* (jalapæ pulv., ℨx; sem. coriandr., fœnicul. dulc., āā ℨss; aquæ, fℨxiiss; sacch., ℨxxv); cathartic; dose, fʒij–iv for children. **S. de kinâ kinâ cum vi'no,** *Syrup of cinchona with wine* (cort. cinchonæ officinalis, ℨij; ext. cinchonæ, ℨvj; vini albi, Oj; alcohol., fℨj; sacchar. alb., ℔iss); dose, fℨss–j. **S. krame'riæ** (Ph. U. S.), *Syrup of krameria* or *rhatany* (ext. kramer. fluid., fℨxij; syrup., fℨxxx); an adjunct to astringent mixtures or given in diarrhœa; ℿxx–xxx to a young child. **S. lactuca'rii** (Ph. U. S.), *Syrup of lactucarium* (extract. lactucarii fluid., fℨij; syrup., fℨxxix); dose, fʒij. **S. limo'nis,** S. limonum; anodyne. **S. limo'nis suc'ci,** S. limonum. **S. limo'num,** *S. limonis* (Ph. U. S.), *Syrup of lemon, Lemon syrup* (limon. succ., fℨxvj; limon. cort., ℨj; sacchar., ℨxxviij; water, q. s. to make Oij); cooling and agreeable. **S. e meco'nio,** S. papaveris. **S. de mel'le,** mellitum simplex. **S. mercu'rio median'te gum'mi** (hydrargyri pur., ℨj; acaciæ, ʒiij; syrup. diacod., ℨss); possesses the properties of blue pill; dose, gr. ij–viij or more. **S. mo'ri** (Ph. U. S.), *Syrup of mulberries* (mori succ., Oj (imp.); sacchar. purif., ℔ij¼; spirit. rectificat., fℨiiss); gratefully refrigerant; other berries may be similarly employed for syrups, as strawberries, raspberries, etc. **S. mor'phiæ aceta'tis,** *Syrup of acetate of morphia* (liq. morphiæ acet., fℨj; syrup., fℨxv); dose, fℨss–fℨj as an opiate. **S. mor'phiæ muria'tis,** *Syrup of muriate* or *hydrochlorate of morphia* (liq. morph. muriat., fℨj; syrup., fℨxv); dose, fℨss–fℨj, as an opiate. **S. mor'phiæ sulpha'tis** may be made in the same way. **S. ni'ger,** molasses. **S. o'pii,** *Common syrup of poppies* (watery extract of opium, gr. xviij; boiling water, ℨxviij); properties those of opium and syrup; see *Syrupus papaveris.* **S. de papav'ere errat'ico,** S. rhœados. **S. papav'eris,** *S. papaveris somniferi* or *papaveris albi, Syrup of poppies* (papav. capsul., ℨxxxvj; spirit. rectificat., fℨxvj; sacchar. purificat., ℔iv; aquæ destillat. bullient., q. s.; Ph. Br.); dose for adult, fʒss–j; for a child, ℿxxx; much less for an infant; see *Syrupus opii.* **S. pi'cis liq'uidæ** (Ph. U. S.), *Syrup of tar* (tar, ℨiij; cold water, fℨv; boiling distilled water, fℨxx; sugar, ℨxxviij); dose, fʒj–ij. **S. de po'mis compos'itus,** see *S. sennæ.* **S. pro'teæ,** see *Protea mellifera.* **S. pru'ni Virginia'næ** (Ph. U. S.), *Syrup of wild cherry bark* (pruni Virginian., ℨvss; sacchar., ℨxxviij; glycerin., fℨij; aquæ, q. s. to make Oij); dose, as a demulcent expectorant, fʒj to fʒiij. **S. qui'niæ,** *Syrup of quinia* (simple syrup, Oij; sulphate of quinia, gr. lxiv); six spoonfuls are commonly sufficient to arrest an intermittent. **S. quin'que radi'cibus,** *Syrup of five roots* (rad. apii, fœniculi, apii petroselini, āā ℨv; rad. asparag., rusci aculeati, āā ℨv; aquæ, Ovij; white sugar, ℔vj); aperient and diuretic; used in obstructions of the liver, spleen, and mesentery, and in dropsy, etc. **S. rham'ni** or **rham'ni cathar'tici,** *Syrup of buckthorn* (rhamn. succ., Oiv; zingib., pimentæ, āā ℨ¾; sacch. purif., ℔v or q. s.; spirit. rectificat., fℨvj; Ph. B.); cathartic, but apt to gripe; dose, fℨss–ij. **S. rhe'i** (Ph. U. S.), *Syrup of rhubarb* (rhubarb, ℨiv; cinnamom., ℨvj; potassium carbonate, ℨij; sugar, ℨxxviij; water, q. s. to make Oij). **S. rhe'i aromat'icus** (Ph. U. S), *Aromatic* or *Spiced syrup of rhubarb* (aromatic tincture of rhubarb, fℨij; syrup, fℨxiv); the aromatic syrup of rhubarb is a gentle carminative laxative; dose to a child, fʒj; to an adult, fℨj. **S. rhœ'ados,** *Syrup of red poppy;* the Ph. Br. has a formula for the preparation of this syrup from fresh *red poppy petals, refined sugar, distilled water,* and *rectified spirit;* dose, fʒj. **S. ro'sæ** (Ph. U. S.), *S. rosarum solutivus* or *e rosis siccis* or *rosæ centifoliæ* or *rosaceus solutivus, Syrup of roses* (extract. rosæ fluid., fℨij; syrup., fℨxiv); mild astringent; dose, fʒj. Gently laxative; dose, fʒij–fℨiss or more. **S. ro'sæ Gal'licæ,** *Syrup of red roses* (red rose, diluted alcohol); mildly astringent; added to stomachic infusions. **S. ru'bi** (Ph. U. S.), *Syrup of blackberry root* (fluid extract of rubus or blackberry, fℨiv; syrup, fℨxij); gently astringent, and used as an addition to prescriptions for diarrhœa of children. **S. ru'bi idæ'i** (Ph. U. S.), syrup of raspberry, made of raspberries and sugar. **S. sac'chari,** S. simplex. **S. sar'sæ,** S. sarsaparillæ. **S. de sarsaparil'lâ et sen'nâ compos'itus,** *Compound syrup of sarsaparilla and senna* (rad. sarsap., warm water, flowers of borage, white roses, senna leaves, and aniseed; honey, lb.

ij; boiled to a syrup); alterant, depurative, and sudorific; dose, f℥ss–ij. **S. sarsaparil'læ,** *Syrup of sarsaparilla* (rad. sarsap., ℔j; aquæ bullient., cong.; sacch. purif., ℔j); used in the same cases as the root; dose, f℥j–iv and more. **S. sarsaparil'læ compos'itus** (Ph. U. S.), *Compound syrup of sarsaparilla* (sarsaparill., f℥xiiss; lign. guaiac., ℥iss; rosæ centifol., sennæ, glycyrrhiz., āā ℥j; sassafras, ℥ss; anisi, ℥ss; gaultheriæ, ℥ss; sacchar., ℥l; alcohol. dilut., water, āā q. s. to make Oiiiss); dose, f℥ss. **S. sar'zæ,** S. sarsaparillæ. **S. de scammo'nio,** *Syrup of scammony* (scammon., ℥ss; sacch. alb., ℥iv; alcohol—s. g. .985 to .915—f℥viij; syrup of violets, f℥iv); cathartic; dose, f℥j to f℥ss. **S. scil'læ** (Ph. U. S.), *Syrup of squills* (acet. scillæ., Oj; sacch., ℥xxvj; aquæ, q. s. to make Oij); diuretic, expectorant, and emetic; used in the same cases as the oxymel of squills. **S. scil'læ compos'itus,** *Compound honey of squills, Compound syrup of squills, Hive syrup* (scillæ, senegæ, āā ℥iiss; antim. et potass. tart., gr. xxviij; sacchar., ℥xxvj; calcii phosphat. præcipitat., gr. xc; alcohol. dilut., aquæ, āā q. s. to make Oij). It is often given as an emetic in cases of croup and in catarrh, especially in children; dose, to infants, 10 drops to a drachm, repeated every 15 minutes if vomiting be desirable. **S. scil'læ marit'imæ,** S. scillæ. **S. scillit'icus,** S. scillæ. **S. sen'egæ** (Ph. U. S.), *Syrup of seneka* (extract. senegæ fluid., Oss; aquæ ammoniæ, f℥iss; sacchar., ℥xxviij; aquæ, q. s. to make Oij); stimulant expectorant; dose, f℥j–ij. **S. sen'næ** (Ph. U. S.), *Syrup of senna* (sennæ, ℥xvj; sacch., ℥xxix; alcohol, f℥ij; oil of coriander, water, q. s. to make Oij); cathartic; dose, f℥j to f℥j or more to an adult. **S. sim'plex,** *Syrupus* (Ph. U. S), *Simple syrup, Syrup, Common syrup of capillaire* (sacchar. pulv., ℥lxxx; aquæ destillat., q. s.; dissolve, boil, to make f℥xc. **S. de spi'nâ cervi'nâ,** syrupus rhamni. **S. de stœch'ade commu'nis,** see *Lavandula.* **S. toluta'nus** (Ph. U. S. and Br.), *S. tolutani* or *toluiferæ balsami* or *balsamicus, Balsamic syrup, Syrup of Tolu* (balsam. tolut., f℥i¾; sacchar., ℥xxviij; aquæ destillat., q. s. to make Oij); used as a demulcent and to give flavor. **S. vi'olæ,** *S. violæ odoratæ* or *violarum, Syrup of violets* (flor. recent. viol. odorat., ℔ij; aq. bull., Oviij; sacch. pur., ℔xv); gently laxative; dose, f℥j–℥j. **S. zingib'eris** (Ph. U. S.), *Syrup of ginger* (extract. zingib. fluid., f℥j; aquæ, q. s. to make Oij; sacchar., ℥xxx); excitant to the stomach; dose, f℥j–iv.

Sys. As a prefix, like *sym*, with.

Sysoma, sis-o'mah (*sys, soma,* body). Double two-headed monster with bodies fused.

Syspasia, sis-pas'e-ah (*sys, spao,* to draw). Clonic spasm with diminished sensibility and inability of utterance. **S. convul'sio,** convulsion. **S. epilep'sia,** epilepsy. **S. hyster'ia,** hysteria.

Syssarcosis, sis-sar-ko'sis (*sys, sarx,* flesh, *osis*). Union of bones by means of muscles, such as the union of the os hyoides with the lower jaw of the scapula; the ribs, etc.

Systalsis, sis-tal'sis. Systole.

Systaltic, sis-tal'tik (*sys, stello,* to contract). *Peristaltic.* A systaltic motion in a part is one in which there is alternate contraction and dilatation. See *Systole.*

Systatica, sis-tat'ik-ah (*sys, istemi,* to place). Diseases affecting several or all of the sensorial powers simultaneously; irritation or inertness of mind extending to the muscles or external senses, or of the muscles or external senses extending to the mind.

System, sis'tem (*sys, istemi,* to place). The collection and arrangement of different matters having an analogy to each other or working toward the same end. In natural history, a methodical arrangement of objects for the purpose of facilitating study. In anatomy, an assemblage of organs composed of the same tissues and intended for similar functions—for instance, the *nervous system, muscular system,* etc.

Systema, sis-ta'mah. System. **S. nervo'sum vegetati'vum,** sympathetic nervous system. **S. vaso'rum,** vascular system. **S. ve'næ porta'rum,** portal system.

Systematism, sis'tem-a-tism. A method according to which every fact of a science is collected around an opinion, true or false; one who reduces things to such a method is called a *Systematist.*

Systematist, sis'tem-a-tist. See *Systematism.*

Systematology, sis-tem-a-tol'o-je (*systema, logos,* a discourse). The doctrine of, or a treatise on, systems.

System'ic. Belonging to the general system, as systemic circulation in contradistinction to the pulmonic. **S. le'sion,** one confined to homologous parts, as the lateral or posterior columns of the spinal cord.

Systole, sis'to-la (*sys, stello,* to contract). The movement of constriction or contraction of the heart to give impulse to the blood or to cause its progression; opposed to the diastole.

Systolic, sis-tol'ik. Relating to the systole of the heart, as systolic murmur.

Systremma, sis-trem'mah (*sustremma,* anything twisted together). Cramp of muscles of the leg.

Syzygium jambolanum, siz-ig'e-um jam-bo-lan'um. Jambol, a tree growing in the East Indies, having edible fruit and astringent bark; the seeds are used as a remedy in diabetes. **S. nervo'rum,** a pair of nerves.

T.

T. Abbreviation of *tension*, as of the eye.

T-bandage. *T-fascia, Fascia T-formis* or *Heliodori, Crucial bandage.* A bandage shaped like the letter T, consisting of a strip of linen of variable length and breadth, the middle of which is attached at right angles to the extremity of another strip, also of variable length and breadth. When two such strips are attached at a distance from each other, the bandage is called a double T; used principally for supporting the dressings after the operation for fistula in ano, in diseases of the perineum, groin, anus, etc.

T-fas'cia. T-bandage.

T-fi'bre. Branch given off from fibre of multipolar ganglion-cell.

Taba'ci fo'lia. Nicotiana tabacum.

Tabacinus, tab-as-e'nus. Color of tobacco—pale-brown.

Tabacosis, tab-ak-o'sis. Production of disease by inhaling vegetable fibres.

Taba'cum (tobacco) (Ph. U. S.). Dried leaves of Nicotiana tabacum.

Tab'anus (the horsefly). Fly in the Hudson's Bay Territory, called *Bulldog* by the *voyageurs*, which makes a perforation like a leech-bite, from which it sucks the blood.

Tabardillo, tab-ar-dil'lo. A kind of highly adynamic fever common in South America.

Tabasheer, tab'ash-eer. *Tabaschir, Tabaxir.* Substance found in the knots of the bamboo in the East Indies, as a consequence of a morbid condition of the part; used formerly in obstruction of the bowels. The sweet juice of the bamboo stalks has also been called tabasheer.

Tabefaction, tab-e-fak'shun (*tabes*, wasting, *facio*, to make). Emaciation.

Tabefy, tab'e-fi. To emaciate.

Tabella, tab-el'lah. *Lozenge, Tablet.* A solid medicine composed of a powder, sugar, and mucilage. See *Pastil* and *Trochisci.* Tabellæ are not official in the Ph. U. S. **T. ad ardo'rem ventric'uli,** trochisci carbonatis calcis. **T. cardial'gicæ,** trochisci carbonatis calcis. **T. nitroglyceri'ni,** tablets containing chocolate, gr. iiss, and nitroglycerin, gr. $\frac{1}{100}$ (Ph. Br.).

Taberna medica, tab-ur'nah med'ik-ah (*taberna*, a shop). An apothecary shop.

Tabernæmontana utilis, tab-ur-ne-mon-tan'ah u'til-is (after Tabernæmontanus, a German botanist). A tree of British Guiana, called by the natives *hyahya*, the bark and pith of which yield a milk used as a refreshing drink.

Tabes, tab'ees (*tabeo*, to decay). *Tabidness, Decline, Consumption, Wasting.* Emaciation of the whole body with general languor, hectic fever, and for the most part depressed spirits. **T., at'rophy,** phthisis. **T. coxa'ria,** wasting from suppuration of the hip-joint. **T. diabet'ica,** diabetes mellitus. **T. diuret'ica,** diabetes mellitus. **T. dorsa'lis,** wasting of the body, attended at first with a pain in the back or loins, and afterward in the neck or head, sometimes caused, it has been conceived, by too early or too frequent addiction to venery. The term is now almost entirely employed synonymously with locomotor ataxy. **T. glandula'ris,** T. mesenterica; scrofula. **T. ischiad'ica,** ischiophthisis. **T. lac'tea,** atrophy of nursing women; see *Galactia.* **T. mesenter'ica,** an engorgement and tubercular degeneration of the mesenteric glands, followed by emaciation and general disorder of the nutritive functions. **T. nutri'cum,** atrophia lactantium; see *Galactia.* **T. os'sis sa'cri,** tabes dorsalis. **T. pecto'rea,** rhachitis. **T. pulmona'lis,** phthisis pulmonalis. **T. scrofulo'sa,** T. mesenterica. **T. se'num,** marasmus senilis.

Tabescence, tab-es'sence. Emaciation.

Tabescent, tab-es'sent. Wasting; afflicted with tabes.

Tabetic, tab-et'ik. Belonging to or affected with tabes. **T. arthri'tis,** *Charcot's joint disease;* nutritional changes in joints occurring in locomotor ataxia. **T. arthrop'athy,** see *T. arthritis* and *Charcot.* **T. neuri'tis,** degenerative changes in peripheral nerves, found in locomotor ataxia.

Tabid, tab'id. Relating or appertaining to tabes. Wasted by disease.

Tabidness, tab'id-ness. Tabes.

Tabific, tab-if'ik (*tabes, facio*, to make). That which causes consumption or phthisis.

Ta'ble. A name given to the plates of compact tissue which form the bones of the cranium. Of these, one is external, the other internal, and called tabula vitrea on account of its brittleness.

Tab'let. A small table; trochiscus; see *Tabellæ.* **T., vo'tive,** see *Tabula votiva.*

Tabula, tab'u-lah. Tabella; table. **T. vit'rea,** see *Table.* **T. voti'va,** *Votive tablet,* a tablet hung up as an offering in the ancient temples by the sick, descriptive of their diseases and mode of cure, or by those who had been preserved from some calamity.

Tabulatum, tab-u-lat'um (*tabula*). Tabella; table.

Tab'um (allied to **Tabes**). Ichor; sanies; plague.

Taca (Malay name) **oceanica,** tak'ka o-she-an'ik-ah. See *Arrow root, Tahiti.*

Tacamahaca, tak-am-ah-hak'ah. Fagara octandra. **T. carag'na,** caranna.

Tachometer, tak-om'e-tur (*tachus*, quick, *metron*, measure). See *Hæmatochometer.*

Tachycardia, tak-e-kar'de-ah (*tachus*, quick, *kardia*, heart). Rapid action of the heart. **T. strumo sa,** see *Exophthalmia.*

Tachyiater, tak-e-at'ur (*tachus*, quick, *iatros*, physician). One who cures speedily.

Tachyiatria, tak-e-at-re'ah (*tachus*, quick, *iatreia*, healing). The art of curing quickly.

Tachyphrasia, tak-e-fras'e-ah (*tachus*, quick, *phrasis*, speech). Great volubility in speech, sometimes a symptom of mental aberration.

Tachythanatous, tak-e-than'at-us (*tachus*, quick, *thanatos*, death). Speedily fatal.

Tachytomy, tak-it'o-me (*tachus*, quick, *tome*, incision). The art of cutting or operating rapidly.

Taciturn, tas'e-turn (*taceo*, to be silent), Silent or reserved.

Taciturnity, tas-e-turn'it-e (*taceo*, to be silent). State of a person who does not speak. Morbid taciturnity sometimes exists as a symptom of the neuroses, especially of melancholy.

Tact (*tango, tactum*, to touch). A modification of the sense of touch. Passive judgment by the cutaneous nerves regarding bodies exterior to the skin. Tact is passive; touch, active.

Tactile, tak'til. Relating or appertaining to tact or touch. **T. cells,** cells forming end-organs of nerves. **T. cen'tre,** hypothetical centre for sensation of touch, placed in the hippocampal region of the brain. **T. cor'puscles,** small end-organs of nerves in papillary layer of the skin and various mucous membranes. **T. disk,** termination of nerve between cells of Grandry; found in skin covering bills of ducks and geese. **T. menis'ci,** expansion of axis-cylinder of nerves applied to cells of deeper layers of epidermis in parts endowed with special sensibility. **T. papil'læ,** papillæ of skin containing T. corpuscles. **T. re'flexes,** reflex movements caused by excitation of nerves of touch. **T. sensa'tion,** sense of touch.

Taction, tak'shun. Touch.

Tactus, tak'tus. Tact; touch. **T. dolorif'icus,** sensation of pain to the touch. **T. exper'tus** or **erudi'tus,** touch cultivated to a highly sensitive degree; see *Palpation.*

Tæda, te'dah (a torch). A medicine employed under the form of fumigation, pessary, or troch.

Tænia, te'ne-ah (*tainia*, a band, a fillet, a ribbon). *Fascia.* See *Bandage.* Also a genus of intestinal worms—tapeworms—characterized by an elongated, flattened, and articulated body. Of this genus four only inhabit the human body.—*Tænia lata* (see *Bothriocephalus latus*), *Tænia solium*, *Tænia saginata* or *mediocanellata*, and *T. echinococcus.* **T. acanthot'rias**, see *Parasites.* **T. aceph'ala**, bothriocephalus latus. **T. arma'ta**, tænia solium. **T. artic'ulos demit'tens**, tænia solium. **T. canella'ta**, see *Tænia.* **T. cœnu'rus**, see *Cœnurus.* **T. cor'nea**, striæ terminalis. **T. cucumeri'na**, tapeworm found in lower animals and occasionally in man. **T. cucurbiti'na**, tænia solium. **T. denta'ta**, bothriocephalus latus. **T. echinococ'cus**, tapeworm of dog, scolex; when ingested produces echinococcus or hydatid cysts in man. **T. ellip'tica**, see *Parasites.* **T. flavopuncta'ta**, see *Parasites.* **T. for'nicus**, white stria running along margin of third ventricle from pillar of fornix to pineal gland. **T. gris'ea**, bothriocephalus latus. **T. hippocam'pi**, corpora fimbriata. **T. huma'na arma'ta**, tænia solium. **T. huma'na iner'mis**, bothriocephalus latus. **T. hydatig'ena**, hydatid. **T. iner'mis**, T. mediocanellata. **T. la'ta**, bothriocephalus latus. **T. lophoso'ma**, see *Parasites.* **T. Madagascarien'sis**, a rare form of tapeworm. **T. margina'ta**, tapeworm found in dog. **T. mediocanella'ta**, worm derived from beef, and frequently fifteen or twenty feet long, with a larger head than the tænia solium, and with larger and fuller segments; see *Parasites* and *Worms.* **T. medul'læ oblonga'tæ**, band on surface of wall of fourth ventricle. **T. membrana'cea**, bothriocephalus latus. **T. na'na**, see *Worms* and *Parasites.* **T. nervo'sa Halleri**, ganglion of Gasser. **T. os'culis lateral'ibus gem'inis**, bothriocephalus latus. **T. os'culis lateral'ibus solita'riis**, bothriocephalus latus. **T. os'culis marginal'ibus solita'riis**, tænia solium. **T. os'culis superficial'ibus**, bothriocephalus latus. **T. plex'us choroï'dei ventric'uli quar'ti**, posterior portion of the roof of the fourth ventricle. **T. pon'tis**, band of white fibres passing from the gray substance of the posterior perforated space to the medullary centre of the cerebellum. **T. pri'ma**, bothriocephalus latus. **T. sagina'ta**, T. mediocanellata. **T. secun'da**, tænia solium. **T. semicircula'ris**, a medullary, grayish, semitransparent layer situate in the groove separating the thalamus opticus from the corpus striatum in the lateral ventricle. **T. si'nûs rhomboïda'lis**, T. plexus choroïdei ventriculi quarti. **T. so'lium** (*solus*, alone, because at one time supposed to be always alone), *Long* or *Pork tapeworm*, is commonly a few feet long; sometimes its length is enormous. It is said to have been met with 600 feet long. It principally inhabits the small intestines; see *Parasites* and *Worms.* **T. stria'ta** or **Tari'ni**, T. semicircularis; lamina cornea. **T. tenel'la**, bothriocephalus latus. **T. ventric'uli quar'ti**, T. medullæ oblongatæ. **T. vulga'ris**, bothriocephalus latus.

Tæniacide, te'ne-a-side (*tænia*, *cædo*, to kill). Tæniafuge.

Tæ'niæ (pl. of **Tænia**, a band) **acus'ticæ.** Processus teretes. **T. co'li**, see *Colon.* **T. for'nicis**, white striæ running transversely across floor of fourth ventricle. **T. fo'veæ rhomboïda'lis**, T. fornicis. **T. longitudina'les**, see *Colon.* **T. Valsal'væ co'li**, see *Colon.* **T. viola'cea**, see *Locus cæruleus.*

Tæniafuge, te'ne-a-fuge (*tænia*, *fugo*, to drive off). *Tæniacide*, *Tænicide.* A remedy calculated to expel or destroy tænia.

Tænicide, te'ne-side (*tænia*, *cædo*, to kill). A destroyer of the tænia or tapeworm.

Tænifuge, te'ne-fuge. Tæniafuge.

Tæniin (te'ne-in) or **Tæniine**, te'ne-een. See *Hagenia Abyssinica.*

Tænioid, te'ne-oid. Resembling a ribbon or tænia.

Tæniola, te-ne'o-lah (dim. of **Tænia**). A simple, band-like, or flat fibre—*Filum tæniaforme*—seen under the microscope. **T. cine'reæ**, fascia dentata. **T. cor'poris callo'si**, prolongation of peduncle of septum lucidum.

Tafia, taf'e-ah. Rum.

Tag al'der. Alnus incana. **T. sore**, a name popularly given in England to ovine variola.

Tagliacotian (tal-e-ah-ko'shan) **opera'tion** (after G. Tagliacozzi of Bologna, died 1593). See *Rhinoplasty.*

Tail. Caudal extremity. Also used to designate the smaller end of organs, as tail of pancreas, tail of epididymis.

Tail-bone. Coccyx.

Tail-fold. Hollow or fold in the embryo including the hind-gut.

Tait's knot. Used in ligation of the pedicle in intra-abdominal surgery. A double ligature is passed through the pedicle, leaving a loop which is carried back over the pedicle; one end of the ligature then being passed through the loop and both ends tied. **T.'s opera'tion**, removal of uterine appendages, as of ovaries and Fallopian tubes for uterine myoma, and of Fallopian tube for pyosalpinx, etc.

Takamahaka, tak-ah-mah-hak'ah. Fagara octandra.

Ta'ken down. See *Attack.*

Ta'king. See *Contagious.*

Talc. Combination of hydrated magnesian silicate, with iron and alumina in small quantities. **T. earth**, magnesia.

Talcum, tal'kum. Talc. **T. nephret'icum**, nephreticus lapis.

Talen'tum (*talenton*). An ancient weight equal to 54 pounds 2 oz. 5 dr. and 24 grains, *Poids de Marc.* See *Weights* and *Measures.*

Taleolus, tal-a'ol-us (dim. of **Talus**). Malleolus.

Taliacotian (tal-e-ak-o'shan) **opera'tion.** Rhinoplasty. See *Tagliacotian.*

Talinum umbellatum, tal-e'num um-bel-lat'um. See *Mistura.*

Talipes, tal'ip-ees (*talus*, ankle, *pes*, foot). Kyllosis (club-foot). **T. calca'neo-val'gus**, T. calcaneus with T. valgus. **T. calca'neo-va'rus**, see *Kyllosis.* **T. calca'neus**, see *Kyllosis.* **T. ca'vus**, exaggeration of normal concavity of sole. **T. equi'no-val'gus**, see *Kyllosis.* **T. equi'no-va'rus**, T. equinus with T. varus. **T. equi'nus**, see *Kyllosis.* **T. val'gus**, see *Kyllosis.* **T. va'rus**, see *Kyllosis.*

Tal'low. Hard fat of neat cattle. Bayberry. See *Wax*, *myrtle.*

Talocalca'neal (*talus*, astragalus, *calcaneum*). Relating to the astragalus and calcaneum, as the *talocalcaneal* articulation.

Talofib'ular lig'aments. Anterior and middle fasciculi of external lateral ligament.

Taloscaphoid, tal-o-skaf'oid (*talus*, *scaphoid*). *Astragaloscaphoid.* Relating or appertaining to the astragalus and scaphoid, as the taloscaphoid ligament.

Talotib'ial lig'ament. Portion of internal lateral ligament of ankle.

Tal'pa (a mole). A tumor situate on the head, supposed to burrow like a mole. A wen; a mole.

Talparia, tal-pah're-ah. Talpa.

Talpiform, tal'pe-form. Formed like a mole.

Tal'us. Astragalus; malleolus; ankle. See *Calcaneum* and *Pessary.*

Tam'ara con'ga. Averrhoa carambola.

Tam'arac. Bark of Larix Americana; tonic and astringent.

Tamaræ'a zec'la. Tamarindus.

Tamarin'di pul'pa. *Pulp of tamarinds.* Made by digesting them with a small quantity of water until they become of a uniform consistence; then separating the seeds and filaments by pressing through a hair sieve.

Tam'arinds, pulp of. See *Tamarindi pulpa* and *Tamarindus.*

Tamarin'dus ([Arab.] *tamar hendi*, Indian date). *T. officinalis*, *Tamarind tree.* Ord. Leguminosæ. The preserved pulp of the tamarind, *Tamarindus* (Ph. U. S), exported from the West Indies, preserved in syrup; refrigerant and laxative. *Tamarind whey* is made by boiling ℥j of the pulp with ℔iss of milk. When strained it is used as a diluent in fever.

Tamaris'cus (*Tamaris*, now *Tambro*, on the borders of the Pyrenees). Tamarix.

Tam'arisk. See *Tamarix.*

Tam'arix. The *Tamarisk tree*, ord. Tamariscineæ. The bark, wood, and leaves were formerly employed medicinally; the former for its aperient and corroborant virtues in obstructions of the liver; the latter in icterus, hæmoptysis, and cutaneous affections. From *T. orientalis* are obtained tamarisk galls, an excrescence growing upon its branches; from *T. mannifera*, an exudation called tamarisk manna.

Tam'bor oil. Purgative oil obtained from Omphalea oleifera.

Tambour (F.) (a drum). Drum-like instrument for registering movements of the heart.

Tam'nus commu'nis. Tamus communis.

Tam'pan. An insect belonging to the group of Acaridæ or ticks, well known in S. Africa, dreaded by the inhabitants for its bite and the consequences.

Tampicin, tam'pe-sin. Resin from Tampico jalap.

Tampico jalap, tam-pe'ko jal'ap. Tuber of Ipomæa simulans.

Tam'pon (F.) (a bung, a plug). See *Plugging.*

Tamponade'. Application of a tampon.

Ta'mus or **Tam'nus commu'nis.** Root is diuretic, and given as an antilithic, and as a topical application for removing bruise-marks.

Tanacetic (tan-a-se'tik) **ac'id.** *Tanisic acid.* Prepared by the distillation of the heads of common tansy; is deposited in colored crystals, soluble in alcohol and ether; operates as a vermifuge in the same doses as santonin.

Tanace'tin. Bitter principle from Tanacetum vulgare.

Tanacetum, tan-as-e'tum. *Hindheel, Tansy,* ord. Compositæ. Leaves and flowers of tansy—*Tanacetum* (Ph. U. S.)—and the whole herb have a peculiar, strong odor and warm, bitter taste. They are tonic, deobstruent, and anthelmintic; dose, ʒss to ʒj. The infusion is usually drunk as a tea. **T. balsami'ta,** *Costmary, Alecost, Cockmint;* fragrant-smelling herb, somewhat resembling mint, formerly much esteemed as a corroborant, carminative, and emmenagogue. **T. horten'se,** T. balsamita. **T. multiflo'rum,** S. African plant used as a tonic, antispasmodic, and anthelmintic; given in flatulency, gout, amenorrhœa, and dropsy; especially prescribed in cases of ascarides, lumbricoïdes, and other entozoa. It is administered in the form of powder or infusion; the latter acting also as a diaphoretic and diuretic; likewise as a resolvent and anodyne fomentation.

Tana'sia. Tanacetum.

Tan'ge (*tange*, rancidity). A putrescent tumor.

Tan'gent (*tango*, to touch). Touching. **T. galvanom'eter,** appliance for measuring the current-strength of a battery.

Tangential (tan-jen'shal) **ful'crum-cells.** External molecular layer.

Tanghin'ia (Madagascar tanghin). Cerbera tanghin.

Tangle, tan'gel. Laminaria digitata. **T., big,** Pila marina. **T., blue,** Gaylussacia dumosa. **T., sea,** Laminaria digitata.

Taninum, tan-e'num. Tannin.

Tanisic (tan-is'ik) **ac'id.** Tanacetic acid.

Tanjore pill. Pilulæ Asiaticæ.

Tan'nate. Salt of tannic acid. *T. of cannabin* and *T. of quinine* are those employed. The latter is sometimes called tasteless quinine, and given in tablets to children.

Tan'nic ac'id. Tannin.

Tan'nicum pu'rum. Tannin.

Tan'nin. Tannic acid; principle obtained from oak bark and other astringent vegetables, so called from its forming the chief agent in the process of tanning. Pure tannin obtained from galls by the action of ether has been employed as an excellent and powerful astringent; dose, two grains several times a day. **T. albu'minate,** astringent like tannin, but taste is less unpleasant. **T. glyc'erol,** glycerin of tannic acid.

Tan'ret's test. Test for albumin, composed of mercuric chloride 135, potassum iodide 332, acetic acid 20; distilled water to make 1000 parts.

Tansy, tan'ze. Tanacetum. **T., maud'lin,** Achillea ageratum. **T., wild,** Potentilla anserina.

Taofoo. See *Casein.*

Tape-grass. Eel-grass.

Tapeinocephalic, tap-i-no-sef-al'ic (*tapeinos*, low, debased, *kephale*, head). Term applied to skulls the conformation of which indicates a low type of development.

Ta'per, high. Verbascum nigrum.

Tapes, tap'ees (*tapes*, a carpet). Tapetum.

Tapetum, tap-a'tum (tapestry, a carpet). See *Corpus callosum.* **T. alve'oli,** the outer membrane of the teeth; the lining membrane or periosteum of the alveoli. **T. choroï'deæ,** a shining spot on the outside of the optic nerve in the eyes of certain animals, due to the absence of the pigmentum nigrum, occasioning the reflection of a portion of the rays from the membrana Ruyschiana. Its use appears to be, by reflecting the rays, to cause a double impression on the retina, and thus add to the intensity of vision. **T. lu'cidum,** T. choroïdeæ; also radiating fibres of corpus callosum. **T. ni'grum** or **oc'uli,** pigmentary layer of retina.

Tape'worm. Tænia. **T., broad,** bothriocephalus latus. **T., long,** tænia solium.

Tapinocephaly, tap-in-o-sef'al-e (*tapeinos*, low, *kephale*, head). Condition of a skull with flattened vault.

Tapinocranius, tap-in-o-kran'e-us (*tapeinos*, low, *kranion*, skull). Skull having relatively too little height as compared to length.

Tapioca, tap-e-o'kah. See *Jatropha manihot.* **T. meal,** Brazilian arrow root. **T., pearl,** see *Jatropha manihot.*

Tapiroid, ta'pir-oid. Like a tapir's snout, as in elongated cervix uteri.

Ta'pis (*tapes*, a carpet). Tapetum.

Tapotement (F.), tap-ote'mon. Form of percussion employed in massage.

Tap'ping. Paracentesis.

Tapsaria, tap-sah're-ah. Decoctum hordei.

Tap'sus barba'tus. Verbascum nigrum.

Tar. See *Pinus sylvestris.* **T. ac'ne,** a form of acne resulting from the application of fluid tar or from the action of the atmosphere impregnated with the vapor of tar. **T., Barba'does,** petroleum. **T. beer,** see *Pinus sylvestris.* **T. infu'sion,** see *Pinus sylvestris.* **T., min'eral,** pissasphaltum. **T. oint'ment,** unguentum picis liquidæ. **T. water,** see *Pinus sylvestris.* **T. wine,** see *Pinus sylvestris.*

Tar-and-soot can'cer. Epithelioma of the scrotum.

Ta'ra. An epidemic contagious disease in Siberia, in the town of Tara, which resembled somewhat the button scurvy of Ireland.

Taracannin, tar-a-kan'nin. Crystallizable principle from cockroach; supposed diuretic.

Tarache, tar'ak-e (*tarache*, disorder). A disorder of sight which arises from a blow, compression of the eye, the action of dust, smoke, or other external cause. Also mild or incipient ophthalmia.

Tarag'ma (*taragma*). Tarache.

Tarag'mus (*taragmos*). Tarache.

Tar'agon. Artemisia dracunculus.

Tar'aho. Peltandra Virginica.

Tarantismus, tah-ran-tiz'mus (from *Tarentum* or *Taranto*, where it was observed). *Tarantism.* A feigned or imaginary disease in Apulia, characterized by excessive avidity for dancing at the sound of instruments, at first ascribed by the vulgar to the bite of the tarantula. A sort of tarantismus peculiar to Africa, and believed to be spontaneous, has been called *Tarentismus Tangitanus.* Also a form of dancing chorea.

Tarantula, tah-ran'tu-lah (same etymon). *Tarentula.* A species of spider whose bite has been looked upon as dangerous.

Tarassis, tah-ras'sis (*tarasso*, to throw into disorder). Male hysteria.

Taraxacerin, tah-raks-as'er-in. Crystallizable principle of taraxacum.

Tarax'aci ra'dix. Leontodon taraxacum.

Taraxacin, tah-raks'as-in. Bitter principle of taraxacum.

Taraxacum, tah-raks'a-kum (*tarasso*, to disturb or disorder). Leontodon taraxacum. **T. dens leo'nis,** Leontodon taraxacum. **T. officina'le** or **T. vulga're,** Leontodon taraxacum.

Tarax'is (*taraxis*). Tarache; slight external ophthalmia; ophthalmia.

Tarchon (tar'kon) **sylves'tris.** Achillea ptarmica.

Tardieu's (tar'de-u's) **spots.** Punctiform ecchymoses seen beneath the pleura after death from asphyxia.

Tarentismus, tah-ren-tiz'mus. Tarantismus. **T. Tangita'nus,** tarantismus.

Tarentula, tah-ren'tu-lah. Tarantula.

Tarentulism, tah-ren'tu-lizm. Tarantismus.

Tar'gar. Juniperus communis.

Tari. Palm or cocoa wine, from which sugar was obtained, called jagry; once used as a tonic.

Tarini (tar-e'ne) **fas'cia** (after the anatomist Tarin). Fascia dentata. **T. pons,** cineritious substance between the corpora albicantia which unites the crura and assists in forming the bottom of the third ventricle. The fossa at the bottom of which it is placed is called locus perforatus posticus, posterior perforated space, substantia or laminata perforata posterior. **T. val'vula,** see *Valvula*.

Tari'nus, fas'cia of. Fascia dentata. **T., pons of,** see *Tarini*. **T., valve of,** valvula Tarini.

Ta'ro. Arum esculentum.

Tar'sal (*tarsus*). That which relates to the tarsus. **T. arches,** made by palpebral arteries passing across tarsal cartilages. **T. ar'tery,** branch of dorsalis pedis artery. **T. articula'tions** result from the union of the bones of the tarsus with each other. **T. canal',** channel under the head of the abductor hallucis through which pass the main vessels and nerves to the sole of the foot; interarticular canal of tarsus. **T. car'tilages,** see *Tarsus*. **T. cyst,** chalaza. **T. lig'aments,** fibrous bands running from the eyelids to the malar and nasal process of superior maxillary bones; see *Tarsea lata*. **T. tu'mor,** chalaza.

Tarsalgia, tar-sal'je-ah (*tarsus*, *algos*, pain). Pain, gouty or other, in the tarsus.

Tarsea lata (tar'se-ah lat'ah) **ligamen'ta.** Three ligaments stretching from the edge of the orbit to that of the tarsi.

Tarsectomy, tar-sek'to-me (*tarsus*, *ektome*, excision). Excision of all or part of the tarsus.

Tarsectopia, tar-sek-top'e-ah (*tarsus*, *ektopos*, out of place). Dislocation of the tarsus.

Tarseus (tar'se-us) or **Tar'sian.** Tarsal.

Tarsitis, tar-se'tis. Inflammation of the tarsal cartilages.

Tarsocheiloplastic, tar-so-ki-lo-plas'tik (*tarsus*, *cheilos*, edge, *plasso*, to mould). Operation for the repair of the edges of the eyelids in trichiasis.

Tarsometatarsal, tar-so-met-a-tar'sal. That which relates to tarsus and metatarsus. **T. articula'tions** are those between the bones of the second row of the tarsus and the metatarsal bones. **T. lig'aments,** those connected with the tarsometatarsal joints, some of which are dorsal and others plantar.

Tarsophyma, tar-so-fe'mah (*tarsus*, *phuma*, tumor). Tumor of the tarsus.

Tarsoplasty, tar'so-plas-te (*tarsus*, *plasso*, to mould). Plastic operation upon the eyelid.

Tarsorhaph'ia or **Tarsorrhaph'ia.** Tarsorrhaphy.

Tarsorrhaphy, tar-sor'rha-fe (*tarsus*, *rhaphe*, suture). Operation for diminishing the size of the opening between the eyelids when enlarged by surrounding cicatrices.

Tarsotomy, tar-sot'o-me (*tarsus*, *tome*, incision). The section or removal of the tarsal cartilages.

Tarsus, tar'sus (*tarsos*). Posterior part of the foot. It consists of seven bones arranged transversely in two rows, between which amputation is sometimes performed. The first or tibial row consists of the astragalus and os calcis; the second or metatarsal, of the scaphoid, cuboid, and three cuneiform bones. *Tarsi*, *Tarsal cartilages*, *Tarsal fibro-cartilages*, *Cilia*, are two small cartilaginous layers seated in the substance of the free edge of each eyelid. The upper is larger and broader than the lower. Both commence at the bifurcated extremity of the tendon and of the orbicularis palpebrarum, and pass to the opposite commissure of the eyelids. They are broader in the middle than at their extremities.

Tar'tar. Antimonium tartarizatum, (improperly) potassii supertartras impurus. **T., calca'reous,** potassii subcarbonas. **T., cream of,** potassii bitartras. **T., crys'tals of,** potassii supertartras. **T. emet'ic,** antimonium tartarizatum. **T., salt of,** see *Potash* and *Potassii subcarbonas*. **T., sol'uble,** potassii tartras; see *Potash*. **T. of the teeth,** see *Odontolithus*.

Tar'tarated an'timony. Antimonium tartarizatum. **T. i'ron,** ferrum tartarizatum. **T. so'da,** sodium tartrate.

Tartari crystalli, tar'tar-e kris-tal'le. Potassii supertartras.

Tartar'ic ac'id. Tartareous acid. $H_2C_4H_4O_6$. An organic acid of crystalline form, found in the vegetable kingdom, chiefly in grapes and acid fruits. It is refrigerant and antiseptic, but is chiefly used for making effervescent draughts with soda. Obtained from acid tartrate of potassium. *Tartaric lemonade*, *Tartaric acid lemonade*, is made by adding syrup of tartaric acid to water.

Tar'tarized an'timony. Antimonium tartarizatum. **T. i'ron,** ferrum tartarizatum.

Tar'tarum. Potassii supertartras impurus. **T. solu'bile,** potassii tartras. **T. vitriola'tum,** potassii sulphas.

Tar'tarus ammo'niæ. Ammonii tartras. **T. chalybea'tus,** ferrum tartarizatum. **T. cru'dus,** potassii supertartras impurus. **T. den'tium,** see *Odontolithus*. **T. emet'icus,** antimonium tartarizatum. **T. kalicofer'ricus,** ferrum tartarizatum. **T. kali'nus,** potassii tartras. **T. lixiv'iæ,** potassii tartras. **T. martia'lis,** ferrum tartarizatum. **T. potas'sii ferrugino'sus,** ferrum tartarizatum. **T. stibia'tus,** antimonium tartarizatum. **T. subpotas'sicus,** potassii supertartras. **T. superpotas'sicus,** potassii supertartras. **T. tartariza'tus,** potassii tartras.

Taschkent (tash'kent) **ul'cer.** *Sartian disease.* Endemic malady of Taschkent. It occurs on the face as a red spot, with induration of the skin and finally ulceration.

Ta'sis (*tasis*). Extension; tension.

Taste. One of the five external senses, which instructs us as to the savor of bodies, and of which the tongue is the principal organ. Gustation is the exercise of this faculty. In disease the taste frequently becomes variously vitiated. The nerves associated with taste are the glossopharyngeal and the lingual branch of the fifth pair. See *Savor*. **T. buds,** flask-shaped bodies surrounding the circumvallate papillæ of the tongue, and supposed to be special organs of taste. **T. cells,** spindle-shaped cells found in the taste buds.

Taste'less ague-drops. Solution of an arsenical compound, usually Fowler's solution.

Tattoo'ing. A practice of puncturing the skin and forcing coloring matters into the punctures. Sailors in all countries are in the custom of practising it by rubbing or forcing gunpowder into the punctures. The figures thus formed remain through life. The process has also been employed surgically, as in cases of opacity of the cornea.

Tatze, tat'za. The fruit of Myrsina Africana, native of Abyssinia, the Cape of Good Hope, the Azores, and Algeria; used as a tæniafuge.

Taurin, taw'rin. Amido-ethyl-sulphonic acid; a substance found in bile in combination with cholalic acid; solid, colorless, and crystallizable.

Taurocholic (taw-rok'o-lik) **acid.** See *Cholic acid*.

Taurus, taw'rus (*tauros*). Penis; perineum. Of old the lower part of the male organ with the raphe extending to the anus.

Taurylic (taw-ril'ik) **acid** (*tauros*, a bull). Substance resembling carbolic acid found in urine.

Tau'ya, Tayu'ga, Tayu'ya. Root of South American plant, used in Brazil as a remedy for syphilis and dropsies.

Taxine, taks'een. Crystalline alkaloid found in seeds and leaves of Taxus baccata.

Tax'is (*tasso*, to arrange). *Syntaxis.* Methodical pressure exerted by the hand on a hernial tumor for the purpose of reducing it. Too strong pressure of parts must be avoided, as inflammation and gangrene might be induced. The displaced organs must be pushed into the abdomen, according to the direction of the axis of the hernial sac.

Taxodium distichum, tax-o'de-um dis'tik-um (*taxos*, the yew tree, *eidos*, resemblance). *Cypress, American* or *Bald cypress.* Indigenous; ord. Coniferæ; a balsam obtained from it is applied to cuts and wounds. The resin from the cones is diuretic and carminative.

Taxonomic, taks-o-nom'ik. Relating or appertaining to taxonomy or biotaxy.

Taxonomy, taks-on'o-me (*taxis*, order, *nomos*, law). Arrangement or co-ordination of living organisms.

Taxus baccata, taks'us bak-kat'ah (*taxos*, the yew). The *Yew tree, Smilax,* family Coniferæ. The fruit may be eaten without inconvenience, unless the stones be swallowed, when poisoning may occur. The leaves have been recommended in epilepsy; the resin obtained from the bark has been called albir. **T. Canaden'sis,** *American yew, Ground hemlock;* indigenous; the leaves are said to be sedative.

Tax'wax. See *Nucha.*

Tayuga. Plant of S. America, whose root is considered anthelmintic.

Tea. Thea. **T., ap'ple,** see *Apple tea.* **T., Baha'ma,** Lantana camara. **T., beef,** see *Beef tea.* **T., ber'ried,** gaultheria. **T., Blank'enheim,** see *Galeopsis grandiflora.* **T., Brazil',** Lantana pseudothea. **T., Bush'man's,** Methystophyllum glaucum. **T., Caf'fre,** Helichrysum nudifolium. **T., chick'en,** see *Chicken tea.* **T., flax'seed,** infusum lini compositum. **T., gin'ger,** infusum zingiberis. **T., Hot'tentot's,** Helichrysum serpyllifolium. **T., Lab'rador,** Ledum latifolium. **T. leaf eye,** conjunctivitis with muco-purulent discharge resulting from prolonged application of tea-leaves to the eyes, as practised in domestic medicine. **T., lem'on-peel,** see *Citrus medica.* **T., lye, Phys'ick's,** see *Fuligokali.* **T., marsh,** Ledum palustre. **T., Mex'ico,** Chenopodium ambrosioïdes. **T., mint,** infusum menthæ. **T., moun'tain,** gaultheria. **T., mut'ton,** see *Mutton tea.* **T., New Jer'sey,** celastrus. **T., Oswe'go,** Monarda coccinea. **T., Par'aguay,** Ilex Paraguensis. **T., red'berry,** gaultheria. **T., sage,** infusum salviæ. **T., Santa Fé,** Alstonia theæformis. **T., sass,** see *Saloop.* **T., sas'safras,** saloop. **T., slip'pery elm,** infusum lini compositum. **T., soot,** see *Fuligokali.* **T., South Sea,** Ilex vomitoria. **T., Span'ish,** Chenopodium ambrosioïdes. **T., team'ster's,** see *Teamster's.* **T., veal,** see *Veal tea.*

Tea'berry. Gaultheria.

Teak. Paronychia.

Teale's amputa'tion. That in which two square flaps are made, the longer of a length of half the circumference of the limb, the shorter one-quarter as long, and so placed as to include the vessels.

Team'ster's tea. *Cautillo.* Tea made from Ephedra antisyphilitica, a shrub growing in Arizona, and used as a remedy in venereal disease.

Tear. *Eye-drop, Weeping-tear.* Secretion of the lacrymal gland, poured between the globe of the eye and the eyelids to facilitate the motions. The tears are saline, inodorous, and colorless. In pharmacology tear means any gummy or other exudation, the drop-like form of which has been considered to resemble tears. **T. punc'ta,** lacrymal puncta.

Tears, deer'. Bezoar of the deer.

Teasel (tee'zel), **cul'tivated.** Dipsacus sylvestris. **T., ful'ler's,** Dipsacus fullorum. **T., wild,** Dipsacus sylvestris.

Teas'ick (*phthisic*). Phthisis pulmonalis.

Teas'ing. Method of preparing objects for microscopic examination by separation into component parts by means of needles.

Teat (*titthe*). Nipple. **T., su'gar,** objectionable artificial method of feeding infants with powdered sugar crackers in milk or water to form a dough, which is tied up like a ball in a linen rag for the child to suck.

Te'cedon (*tekedon*). Phthisis.

Technocausis, tek-no-kaw'sis (*techne*, art, *kausis*, a burning). Cauterization by application of heat as opposed to that by chemical substances.

Technogonia, tek-no-go'ne-ah (*teknon*, a child, *gone*, generation). Generation; childbearing.

Techomyza fusca, tek-o-me'zah fus'kah. Dipterous insect of which larvæ have been found in the stools and vomit.

Tecnoctonia, tek-nok-ton'e-ah (*teknon*, a child, *kteino*, to kill). Infanticide.

Tecnology, tek-nol'o-je (*teknon*, a child, *logos*, a discourse). A treatise on children.

Tecolithos, tek-ol'ith-os (*teko*, to dissolve, *lithos*, a stone). Judæus (lapis).

Tecology, te-kol'o-je (*tekos*, a child, *logos*, a discourse). Tecnology.

Tecoma ipe, te-ko'mah e'pe. Brazilian tree, bark of which yields much tannin. **T. radi'cans,** *Bignonia radicans, Trumpet flower, Trumpet creeper, Virginia creeper;* indigenous; leaves are acrid; root sudorific, used in snake-bite and as a vulnerary. **T. subverni'co'sa,** Brazilian tree with leaves of acrid taste and having diuretic properties.

Tecta'ria Calagua'la. See *Calagualæ radix.* **T. ferrugin'ea,** see *Calagualæ radix.*

Tectocephalic, tek-to-sef-al'ik (*tectum*, roof, *kephale*, head). Form of head produced by premature union of sagittal sutures.

Tectorial (tek-tor'e-al) **mem'brane.** Thick, fibrillated membrane covering organ of Corti, resting on rods and hair-cells and converting the spiral groove into a canal.

Te'da. Tæda.

Teel oil. Oil obtained from Sesamum orientale. It resembles cotton-seed oil.

Teeth. See *Tooth* and *Dentition.* **T., artific'ial,** see *Artificial.* **T., barred,** molar teeth when the roots are spread or tortuous, so that they cannot be extracted without being broken or without a portion of the alveolar arch being removed. **T., block,** in dentistry, two or more artificial teeth carved from a piece of ivory, or formed from porcelain paste afterward baked and finished. **T., eye,** canine teeth. **T., Hutch'inson's,** see *Hutchinson.* **T., incorrupt'ible,** see *Artificial.* **T., jaw,** molar teeth. **T., milk,** see *Dentition.* **T., min'eral,** see *Artificial.* **T., neck of the,** part of tooth between corona and fang which is embraced by the gum. **T. plate,** porrigo decalvans. **T., por'celain,** see *Artificial.* **T., ser'pent,** see *Serpent teeth.* **T., shed'ding of the,** see *Dentition.* **T., sock'ets of,** see *Alveolus.* **T. of succes'sion,** permanent teeth that succeed corresponding milk teeth. **T., vit'reous sub'stance of the,** enamel of the teeth. **T., vitres'cent,** see *Artificial.* **T., wis'dom,** see *Dentition.* **T., wit,** see *Dentition.*

Teeth'ing. Dentition.

Tegenera medicinalis, tej-en'er-ah med-is-in-al'is. Cantharis.

Tegimen, tej'im-en (*tego*, to cover). Integument.

Tegmen, teg'men. Integument. **T. tym'pani,** portion of anterior surface of petrous portion of temporal bone covering tympanum, Eustachian tube, and mastoid antrum.

Tegmentum, teg-men'tum. The upper portion of the main body of peduncular fibres of the cerebrum, composed principally of the fasciculus teres and posterior pyramid. **T. tym'pani,** tegmen tympani. **T. vasculo'sum,** this corresponds, in the ear of birds, to the stria vascularis of the mammalia. **T. ventric'uli latera'lis,** centrum ovale majus.

Tegula Hibernica, teg'u-lah hib-ur'nik-ah (a tile). Hibernicus lapis.

Teg'umen, (*tego, tectum*, to cover). Integument.

Tegument, teg'u-ment. Integument.

Tegumentary, teg-u-men'ta-re. Relating or appertaining to the integument.

Tegumen'tum. Integument. **T. au'ris**, see *Tympanum*. **T. ventriculo'rum cer'ebri**, oval centre of the brain.

Teichmann's (tike'mans) **crys'tals.** Hæmin crystals.

Teichopsia, ti-kop'se-ah (*teichos*, wall, *ops*, eye). Subjective sensation of vision, wherein lines are angulated, occurring in migraine at times.

Teinesmus, ti-nez'mus (*teinesmos*). Tenesmus.

Teinodynia, ti-no-din'e-ah (*teino*, to extend, *odune*, pain). Pain of the sinews or tendons.

Teinophlogosis, ti-no-flo-go'sis (*teino*, to extend, *phlogosis*, inflammation). Inflammation of the sinews or tendons.

Tek'edon (*tekedon*). Tabes.

Te'la (a web). Texture, tissue. **T. accidenta'lis medulla'ris**, encephaloid. **T. adhæsi'va**, isinglass plaster. **T. adipo'sa**, membrana adiposa. **T. arane'æ**, spider's web. **T. caverno'sa**, cavernous texture. **T. cellulo'sa**, cellular tissue. **T. choroï'dea**, choroïdea tela. **T. cor'nea**, corneous tissue. **T. elas'tica**, elastic membrane. **T. emplas'tica**, sparadrapum. **T. erec'tilis**, erectile tissue. **T. fibro'sa**, see *Fibrous*. **T. Gal'teri**, sparadrapum Galteri. **T. Hippoc'ratis cribro'sa**, cellular tissue. **T. hymenochondro'des**, cartilaginous tissue. **T. hymenochondroï'des**, cartilaginous tissue. **T. ichthyocol'læ glu'tinans**, see *Sparadrapum adhæsivum*. **T. inodula'ris**, inodular tissue. **T. muco'sa**, cellular tissue. **T. organ'ica**, organic texture. **T. sclero'sa**, sclerous tissue. **T. subcuta'nea**, panniculus adiposus. **T. subsero'sa**, subserous cellular tissue. **T. vesicato'ria**, sparadrapum vesicatorium.

Telæsthe'sis (*tele*, far off, *aisthesis*, perception). Ready perception from remote facts or premises.

Telamon, tel'am-on (*telamon*). Bandage for uniting the edges of a wound.

Telamones, tel-am-o'nees (*telamones*, bandages). Charpie used for wounds or linen employed for bandages.

Telangectasis, tel-an-jek'tas-is. Telangiectasia.

Telangiectasia, tel-an-je-ek-tah'se-ah (*tele*, far, *angeion*, vessel, *ektasis*, dilatation). *Telangiectasis*, *Telangectasis*. Dilatation of far or capillary vessels; nævus maternus, wine spots, claret stains. Aneurism by anastomosis; according to some, fungus hæmatodes. **T. oc'uli**, cirsophthalmus.

Telangiosis, tel-an-je-o'sis (*tele*, far, *angeion*, vessel). Disease of capillary blood-vessels.

Teleangeiectasis, tel-e-an-ji-ek'tas-is. Telangiectasis.

Tel'egrapher's cramp. Occupation neurosis affecting muscles of forearm in telegraph-operators.

Teleology, te-le-ol'o-je (*tele*, distant, *logos*, doctrine). Doctrine of purpose as applied to the formation of objects.

Teleorganic, te-le-or-gan'ik (*telos*, end or object). See *Organic*.

Teleosclerosis rheumatica, tel-e-o-skler-o'sis rumat'ik-ah. Scleroderma.

Telepathic, tel-e-path'ik. Pertaining to telepathy.

Telepathy, tel'ep-ath-e (*tele*, far, *pathos*, disease). Form of treatment by transference through space without visible communication. Thought-reading.

Telephium, tel-ef'e-um (*Telephos*, *Telephus*, son of Hercules). *Telephian ulcer*. Name given by the ancients to any ulcer of a very bad kind and difficult to cure, because the wound which Achilles inflicted on Telephus degenerated into a similar ulcer. See also *Sedum telephium*.

Tel'ephone tinni'tus. Neurosis of audition supposed to be due to continued use of the telephone.

Telesphoresis, tel-es-for-a'sis (*telos*, the end, *phores*, to bear). Completed normal delivery.

Telini (tel-e'ne) **fly.** Species of beetle found in India, used for blistering.

Telluric, tel-lu'rik. Pertaining to the earth.

Tellu'rium (*tellus*, the earth). Metal first met with in the gold-mines of Transylvania; specific gravity 6.115; oxidizable in the air and by heat. Salts of tellurium occasion the exhalation of a disagreeable, alliaceous odor from the body.

Telolecithal, te-lo-les'ith-al (*telos*, end, *lekithos*, yolk of egg). Term used to express the fact that in the ovum the yolk is massed at one end, and that segmentation is unequal or partial.

Telolemma, tel-o-lem'mah (*telos*, end, *lemma*, skin). Membrane covering the papilla where the nerve-filament pierces the sarcolemma of muscle-fibre.

Telomalacia, tel-o-mal-ah'se-ah (*telos*, end, *malakos*, soft). Phlegmonous erysipelas.

Telorasis, tel-or'as-is (*tele*, far, *orao*, to view). Presbytia.

Te'lum (a dart). Penis.

Temperament, tem'pur-a-ment (*tempero*, to moderate, from *tempus*, time). Characteristics of mind and body according to which individuals are classed as sanguine, bilious, lymphatic, or nervous.

Tem'perance. *Sobriety.* Moderation; opposed to gluttony and drunkenness.

Temperantia, tem-pur-an'she-ah. Agents which quiet circulation or reduce fever.

Temperatio, tem-pur-ah'she-o. Temperament.

Temperatura, tem-pur-at-u'rah. Temperament.

Temperature, tem'pur-a-ture. See *Heat*. **T., an'imal**, see *Heat, animal*. **T. sense**, sense of appreciation of temperature; may be lost in some forms of disease. **T. spots**, see *Cold spots* and *Hot spots*.

Temperies, tem-per'e-eze. Temperament.

Tem'ple. Depression on each side of the head, between the forehead and eye anteriorly and the ear posteriorly. The temples, distinguished into right and left, correspond to the temporal fossa on each side. The word is thought to be from the Latin *tempus*, time, because in this part the hair first begins to turn white and to indicate age.

Temporal, tem'po-ral (*tempus*). That which relates to the temples. **T. aponeuro'sis** or **fas'cia**, very strong aponeurosis, of a bluish, shining color, attached to the whole of the curved line of the temporal bone, to the posterior edge of the malar bone, to the superior margin of the zygomatic arch, and forming an envelope for the temporal muscle. **T. ar'teries**, *Crotaphite arteries*, are several: I. The *Temporal artery*, properly so called, arises from the outer side of the superior part of the external carotid. It divides into two branches; the one anterior—temporal frontal or internal or anterior; the other posterior—the temporal occipital or external or superior. Before its division it gives off—1. Branches to the parotid; to the joint of the lower jaw; to the meatus auditorius; and to the masseter. 2. The transverse artery of the face. 3. The middle temporal, which arises beneath the cheek-bone and traverses the temporal aponeurosis immediately beneath that bone. II. The *Deep-seated temporals*, two in number, arise from the internal maxillary, and are distinguished as anterior and posterior. They send their principal divisions to the temporal muscle. **T. arteries of the brain**, branches of posterior cerebral supplying the temporal lobe. **T. bone**, irregularly-shaped bone seated at the lateral and inferior part of the cranium, of which it forms part, and contains within it the special organs of audition. It is divided into three parts: 1. The squamous portion. 2. The mastoid portion. 3. The petrous portion, petrous process. **T. canals**, small canals in malar bone for passage of vessels from orbit to temple. **T. convolu'tions**, convolutions of temporal lobe of brain. **T. crest**, ridge of bone starting from external angular process of frontal bone, curving upward and backward over surface of parietal bone. **T. fas'cia**, temporal aponeurosis. **T. fos'sa**, an excavation observed at each side of the head, filled by the muscle whose name it bears, and formed by the temporal and sphenoid bones below, by the parietal and frontal above; separated by a transverse crista from the zygomatic fossa, and completed before by the cheek-bone. **T. frontoma'lar point**, temporal extremity of frontomalar suture. **T. gan'glion**, minute

ganglion of sympathetic system lying on external carotid artery. **T. lines**, two curved prominences upon external surface of frontal and parietal bones, known as superior and inferior. **T. lobe**, portion of cerebrum in middle cerebral fossa, bounded by fissure of Sylvius anteriorly and superiorly, posteriorly continuous with occipital lobe. The cortical centre for hearing. **T. mus'cle**, broad, flattened, triangular muscle filling the temporal fossa; attached to temporal aponeurosis and fossa, and, by a strong tendon which passes under the zygomatic arch, is inserted into coronoid process of lower jaw. It raises the lower jaw and applies the teeth against each other. **T. nerves** are the superficial temporal, from the inferior maxillary branch of the fifth pair, behind the condyle of the jaw; and the deep temporals, from the same nerve at its exit from the cranium. **T. pro'cess**, angle of malar bone articulating with zygoma. **T. pro'cess of lentic'ular nu'cleus**, gray substance uniting lenticular nucleus with tail of caudate nucleus. **T. ridge**, curved prominence of temporal lines. **T. sul'ci**, depressions on temporal lobe of cerebrum. **T. sur'face**, external surface of temporal and parietal bones forming floor of temporal fossa. **T. veins**, veins draining temporal fossa and tissues of vertex into temporomaxillary vein.

Temporalis, tem-po-ral'is. Temporal.

Tem'porary car'tilage. That which is later replaced by bone. **T. teeth**, see *Dentition*.

Temporiza'tion. Expectant or temporizing treatment of disease. See *Expectant*.

Tem'poro (*tempus*, temple). In composition, the temple and the temporal bone.

Temporofacial, tem-po-ro-fa'shal. Belonging to temple and face. **T. nerve**, branch of facial nerve.

Temporomaxillary, tem-po-ro-maks'il-la-re. Belonging to temporal bone and lower jaw. **T. articula'tion**, joint between glenoid cavity and transverse process of temporal bone on one hand and condyle of lower jaw on the other. Two thin cartilages cover the surfaces of these bones. The one is common to the transverse process and the portion of the glenoid cavity anterior to the condyle. This articulation has an interarticular fibrocartilage, two synovial capsules, and two lateral ligaments, internal and external. **T. nerves**, divisions of facial nerve distributed to temporal and maxillary regions. **T. vein**, formed by temporal and internal maxillary; divides into two branches, one to the facial, the other to form the external jugular vein.

Temporo-occipital, tem'po-ro-ok-sip'it-al. Belonging to temporal and occipital bones. **T. ar'tery**, see *Temporal artery*. **T. cerebel'lar fi'bres** or **T. tract of crus'ta**, bundle of fibres in crusta cerebri to outer side of pyramidal tract, not entering the internal capsule, and connecting occipital and temporal lobes of cerebrum and hemisphere of the cerebellum.

Temporoparietal, tem-po-ro-pa-ri'et-al. Belonging to temporal and parietal bones. **T. convolu'tions**, those connecting temporal and parietal lobes at bottom of fissure of Sylvius; also called retro-insular convolutions. **T. su'ture**, connecting temporal and parietal bones; consisting of two parts—squamous suture and parietomastoid suture.

Temporosphenoidal, tem-po-ro-sfe-noi'dal. Belonging to temporal and sphenoidal bones. **T. convolu'tions**, those of temporal lobe of cerebrum. **T. lobe**, temporal lobe. **T. sul'ci**, temporal sulci.

Temporozygomatic (tem-po-ro-zyg-o-mat'ik) **sur'face.** External surface of great wing of sphenoid bone.

Tem'pus (time). Temple. **T. intercala're**, apyrexia; intermission.

Temulence, tem'u-lence (*temetum*, wine, intoxicating drink). Delirium; also apoplectic condition from drunkenness—apoplexia temulenta or dead-drunkenness. Commonly it is used synonymously with drunkenness, and often for a state resembling drunkenness. Mania e temulentiâ is delirium tremens.

Temulentia, tem-u-len'she-ah. See *Temulence*.

Tenacula, ten-ak'u-lah. Bone-nippers. **T. cu'tis**, bands of fibrous tissue connecting the corium with subjacent tissues. **T. ten'dinum**, bands of fibrous tissue connecting tendons with the sheaths. **T. volsel'la**, forceps (lithotomy).

Tenac'ulum (*teneo*, to hold). Fine hook attached to a handle which is thrust through the parietes of a blood-vessel to draw it out and enable it to be tied. **T., Assali'ni's**, forceps or double tenaculum, the points of which are fine, sharp, and bifurcated, so as to be readily received into each other when the instrument is closed on the artery by a spring. **T. menis'ci**, fibrous band running from temporomaxillary fibrocartilage to near the sphenosquamous suture. **T. ner'vi hypoglos'si**, band passing across the hypoglossal nerve near its exit from the skull.

Tenasmus, te-naz'mus. Tenesmus.

Tenax, ten'aks. Larded oakum.

Tendines coronariæ, ten'din-ees kor-on-ar'e-e. Coronary tendons.

Ten'dinous (*tendo*, a tendon). *Tendineous, Sinewy.* Relating or appertaining to, or having the nature of, tendons. **T. tu'mor**, fibroid tumor.

Tendo, ten'do. Tendon. **T. Achil'lis**, Achillis tendo. **T. cordifor'mis**, phrenic centre. **T. cor'dis veno'sus**, circulus callosus Halleri. **T. interme'dius**, centre, phrenic. **T. oc'uli**, ligament of Zinn. **T. palpebra'rum**, see *Orbicular muscles*.

Tendon, ten'dun (*teino*, to stretch). *Sinew, Thew, Leader.* A fibrous cord, more or less round, long, or flattened, of a white, pearl color, and composed of very close parallel fibres. The tendons are attached to the bones by one extremity; by the other they receive the insertions of the fleshy fibres; sometimes they afford attachment to fleshy fibres at both ends —as in the digastric muscle. **T., Achil'lis**, Achillis tendo. **T. cells** or **cor'puscles**, cells of connective tissue found in tendons and ligaments. **T., cen'tral** or **cord'iform, of the di'aphragm**, phrenic centre. **T. re'flex**, reflex contraction in a muscle, produced by percussion of its tendon; see *Reflex*. These reflexes are exaggerated or abolished in a number of nervous diseases, cerebral and spinal tumors, injuries, etc., as shown in the following table (Krauss):

Summary of Tendon Reflexes.

- **Exaggeration of Tendon Reflexes.**
  - **Organic Disease.**
    - **Spinal Cord.**
      - Myelitis.
      - Amyotrophic lateral sclerosis.
      - Paraplegia spastica.
      - Multiple sclerosis.
      - Syringomyelia and hydromyelia.
      - Hæmatomyelia and hæmatorrhachis.
      - Spinal tumors.
      - Pachymeningitis hæmorrhagica interna.
      - Pachymeningitis cervicalis hypertrophica.
      - Brown-Séquard's spinal paralysis.
      - Arthritic muscular atrophies.
    - **Brain.**
      - Hemiplegia.
        - Cerebral apoplexy.
        - Cerebral embolism, Thrombosis.
        - Acute encephalitis.
      - Hæmatoma.
      - Hydrocephalus.
      - Senile dementia.
  - **Functional Disease.**
    - Hysteria.
    - Epilepsy.
    - Neurasthenia.
    - Paramyoclonus.
    - Tetanus.
    - Psychoses.
    - Infectious processes.
- **Abolition of Tendon Reflexes.**
  - Neuritis.
    - Simple.
    - Toxic.
    - Endemic.
    - Infective.
  - Locomotor ataxia.
  - Poliomyelitis anterior.
  - Spinal muscular atrophies.
  - Hereditary ataxia (Friedreich's).
  - Chorea mollis.
  - Chronic ergotism.
  - Diabetes mellitus.
  - Traumatism.
- **Abolition and Exaggeration of Tendon Reflexes.**
  - Meningitis.
    - Spinal.
    - Cerebral.
  - Dementia paretica.
  - Idiocy.

T., tre'foil, the cordiform tendon of the diaphragm. **T. of Zinn,** ligament of Zinn.

Ten'dons, twitch'ing of the. Subsultus tendinum.

Tendophony, ten-dof'o-ne (*tendo, phone,* sound). Auscultation over a tendon during contraction of its muscle.

Tendosynovi'tis. Tenosynovitis.

Teneotomia, ten-e-o-tom'e-ah. Tenotomy.

Tenes'mus, ten-ez'mus (*teino,* to stretch). Frequent, vain, and painful desire to evacuate, a chief symptom of inflammation of the lining membrane of the digestive tube, as of dysentery. Forcing-down pain of the uterus and bladder. **T. vesi'cæ,** painful evacuation of the urine, with perpetual desire to void it; dysuria. **T. vesi'cæ muco'sus,** cystirrhœa.

Ten'nis-el'bow. Sprain or strain of the elbow occurring occasionally in players of tennis.

Tenography, ten-og'raf-e (*tenon,* tendon, *grapho,* to write). Description of tendons.

Tenology, ten-ol'o-je (*tenon,* tendon, *logos,* a treatise). Treatise on tendons. Part of anatomy having to do with tendons.

Tenon, ten'on. Tendon.

Té'non, cap'sule of. Fascia of Ténon. **T., fas'cia of,** fascia of Ténon. **T., mem'brane of,** fascia of Ténon. **T., space of,** see *Fascia of Ténon.*

Tenonitis, ten-on-e'tis. Inflammation of the capsule of Ténon.

Tenonostosis, ten-on-os-to'sis (*tenon,* tendon, *osteon,* bone, *osis,* state of being). Ossification of a tendon.

Tenont'agra (*tenon, agra,* seizure). A variety of gout affecting the tendinous parts of muscles, or the tendinous ligaments which strengthen certain articulations.

Tenontodynia, ten-on-to-din'e-ah (*tenon,* tendon, *odune,* pain). Pain in tendons on motion.

Tenontography, ten-on-tog'raf-e. Tenography.

Tenontology, ten-on-tol'o-je. Tenology.

Tenontophyma, ten-on-to-fe'mah (*tenon,* tendon, *phuma,* growth). Tumor of a tendon.

Tenontotomia, ten-on-to-tom'e-ah. Tenotomy.

Tenontotroti, ten-on-to-tro'te (*tenon, titrosko,* to wound). Those wounded in the tendons.

Tenophyte, ten'o-fite (*tenon,* tendon, *phuton,* growth). Tumor of a tendon, as a bony or cartilaginous growth.

Tenor'rhaphy (*tenon,* tendon, *rhaphe,* suture). Union of a tendon by suture after division.

Tenostosis, ten-os-to'sis. Ossification of a tendon.

Tenosynitis, ten-o-sin-e'tis. An imperfectly formed term denoting inflammation of the synovial sheath of a tendon.

Tenosynovitis, ten-o-sin-o-ve'tis. Inflammation of tendons and their sheaths, the result of injury or of gout, rheumatism, etc., or tubercular in character.

Ten'otome (*tenon, tome,* incision). An instrument for dividing tendons, especially by the subcutaneous method.

Tenotomy, ten-ot'o-me. Operation of dividing a tendon, often practised for the removal of deviation of the joints, as in club-foot, or for relief of strabismus.

Tension, ten'shun (*tendo, tensum,* to stretch). State of a stretched part when its textures are distended by the afflux of fluids or the accumulation of gas, or when its fibres are drawn, as it were, in an opposite direction, and are consequently more resisting than usual. The tension of the eyeball, ocular or intra-ocular tension, or pressure of the contents of the eye on the sclerotic, varies in degree in health and disease, especially in glaucoma, intra-ocular tumors, etc.

Tensive, ten'siv. Accompanied by tension or by a feeling of tension.

Ten'sor. That which stretches or renders tense. **T. cap'sulæ,** muscular fasciculus arising from upper portion of humerus, inserted into capsule of shoulder-joint. **T. cap'sulæ scapulohumera'lis,** muscular bundle arising from base of acromial process of scapula and inserted either into capsule of shoulder-joint or on the humerus. **T. cap'sulæ tibiotarsa'lis** or **T. of cap'sule of an'kle,** muscle sometimes found arising from back of tibia below flexor digitorum and inserted into capsule of ankle-joint. **T. choroï'deæ,** ciliary muscle. **T. fas'ciæ antibrach'ii,** muscular fasciculus sometimes found arising from external head of triceps extensor cubiti and inserted into fascia of origin of extensor carpi ulnaris. **T. fas'ciæ col'li,** muscular fasciculus sometimes found running in form of loop from one extremity of the clavicle to the other. **T. fas'ciæ et cu'tis fo'veæ axilla'ris,** small muscular fasciculus arising from subocularis and inserted into fascia and skin of axilla. **T. fas'ciæ deltoï'deæ,** muscular fasciculi sometimes found inserted into deltoid fascia. **T. fas'ciæ dorsa'lis pe'dis,** muscular fasciculus sometimes found arising from anterior surface of tibia and inserted into annular ligament and deep fascia. **T. fas'ciæ la'tæ,** fascia lata muscle. **T. fas'ciæ pel'vis,** portion of sustentator recti. **T. fas'ciæ planta'ris,** muscle sometimes found arising from the tibia and inserted into plantar fascia. **T. fas'ciæ poplitea'lis,** muscular fasciculus sometimes found arising from the biceps femoris and inserted into the popliteal fascia. **T. fas'ciæ sura'lis,** portion of semimembranosus sometimes found passing to fascia of leg. **T. ligamen'ti annula'ris ra'dii ante'rior** or **vola'ris,** portion of supinator brevis arising from coronoid process and inserted into annular ligament of radius. **T. ligamen'ti annula'ris ra'dii dorsa'lis** or **poste'rior,** portion of supinator brevis arising from dorsum of ulna and inserted into annular ligament of radius. **T. membra'ni synovia'lis tar'si,** T. capsulæ tibiotarsalis. **T. palat'i,** circumflexus musculus. **T. pli'cæ ala'ris,** muscle of birds, at times found in man as a prolongation of tendon of deltoid down the radial side of the arm to insertion of supinator longus. **T. semivagi'næ articulatio'nis humeroscapula'ris,** muscular fasciculus sometimes found extending from pectoralis major to capsule of shoulder-joint. **T. tar'si,** *Lacrymal muscle;* a small muscle belonging to the inner commissure of the eyelids, described by Prof. Horner of Phila., and hence termed *Muscle of Horner.* It arises from the posterior flat surface of the os unguis near its junction with the ethmoid bone, and passes forward and outward, lying on the posterior face of the lacrymal ducts. As it approaches the commissure of the lids, it splits into two nearly equal parts, each of which is appropriated to a duct and inserted along its course almost to the punctum lacrymale. Its chief office is to influence the position of the punctum lacrymale and to regulate the course of the tears through the lacrymal ducts. **T. tibiotarsa'lis,** T. capsulæ tibiotarsalis. **T. troch'leæ,** muscular slip sometimes given off from inner border of the levator palpebræ and inserted into the trochlea. **T. tym'pani,** a small muscle arising from the petrous portion of the temporal bone and the cartilage of the Eustachian tube, and terminating by a tendon reflected over the processus cochleaformis, and inserted into the apophysis of the handle of the malleus. **T. vagi'næ fem'oris,** fascia lata muscle. **T. ve'lum pala'ti,** circumflexus musculus.

Tensores (ten-so'raze) **capsula'rum articulatio'num.** Muscular fasciculi inserted into joint-capsules to prevent injury from relaxation.

Tensura, ten-su'rah (*tendo,* to stretch). Tension.

Ten'sus (*tendo,* to stretch). Penis.

Tent (*tendo, tensum,* or *tentum,* to stretch). Small roll of lint, of a cylindrical or pyramidal shape, introduced into wounds and deep ulcers to prevent closing before they are filled up from the bottom. They are sometimes made of prepared sponge, gentian root, slippery elm, etc., but are not so much used as formerly, except perhaps for dilating the os and cervix uteri. Tangle tents, made of Laminaria digitata, are used for this purpose. **T., sponge,** see *Spongia.*

Tentacularia, ten-tak-u-lah're-ah. Filaria hominis bronchialis.

Tentaculum (ten-tak'u-lum) **cerebel'li** (*tendo, tensum,* or *tentum,* to stretch). Tentorium.

Tentamen (ten-tam'en) **med'icum** (medical trial)

(*tento*, to try). An examination in medicine in the Prussian universities, conducted both in writing and *vivâ voce* before the medical faculty.

Tentigo, ten-te'go (*tendo*, *tensum*, or *tentum*, to stretch). Priapism. **T. vene'rea**, nymphomania. **T. vere'tri**, satyriasis.

Tentorial (ten-to're-al) **an'gle.** That formed by the basicranial axis and plane of tentorium.

Tentorium, ten-to're-um (*tendo*, *tensum*, or *tentum*, to stretch). *T. cerebelli*, *Lateral processes of the dura mater*, *Transverse septum*. A process of the dura mater separating the cerebrum from the cerebellum. It extends from the internal horizontal spine of the occipital bone directly forward to the sella Turcica of the sphenoid.

Ten'tum (*tendo*, to stretch). Penis.

Tentwort, tent'wort. Asplenium ruta muraria.

Tenuis mater, ten'u-is mah'tur. Pia mater.

Tenuitas aquosa, ten-u'it-as ak-wo'sah (watery thinness). Predomination of watery fluid.

Tepegua'je. Gum of Acacia Acapulcensis, employed in Mexico.

Tephromyelitis, tef-ro-me-el-e'tis (*tephros*, ash-colored, *muelos*, marrow). *Poliomyelitis*. Inflammation of anterior horns of spinal cord. See *Poliomyelitis*.

Tephrosia Apollinea, tef-ro'ze-ah ap-ol-lin-a'ah (*tephros*, ash-colored, gray). Galega apollinea of Egypt and Nubia. The leaves are often mixed with senna. **T. leptostach'ya**, plant of Senegal with purgative root. **T. purpu'rea**, of Coromandel; the root is bitter, and a decoction of it is often prescribed in dysentery, lientery, and tympanites. **T. sen'na**, the leaves are used for senna by the people of Popayan. **T. toxica'ria**, *Galega toxicaria* of Cayenne; leaves are used for poisoning fish; suggested as a substitute for digitalis. **T. Virginia'na**, Galega Virginiana.

Tephrosis, tef-ro'sis (*tephros*, ash-colored). Incineration.

Tep'id (*tepidus*, warm). Moderately warm.

Tepida'rium (*tepidus*, moderately warm). See *Stove*.

Teras, ter'as (*teras*). Monster.

Terata, ter-at'ah (*teras*). Monsters. **T. anacatadid'yma**, double monster with division of cerebrospinal axis both above and below. **T. anadid'yma**, monsters with division of cerebrospinal axis from below upward. **T. catadid'yma**, monsters with division of cerebrospinal axis from above downward.

Teratogeny, ter-a-toj'en-e (*teras*, *genesis*, generation). The formation of monsters.

Teratoid, ter'a-toid (*teras*, a monster). Like a monstrosity. **T. tu'mor**, tumor formed by congenital inclusion of a portion of one fœtus in another.

Teratological, ter-a-to-loj'ik-al (*teras*, monster, *logos*, treatise). Relating or appertaining to teratology.

Teratology, ter-a-tol'o-je (*teras*, *logos*, discourse). Treatise on monsters. See *Monsters*.

Teratoma, ter-at-o'mah (*teras*, monster, *oma*, tumor). Tumor composed of various tissues not present in the normal structure of the part.

Teratosis, ter-at-o'sis. See *Monster*.

Terceron, ter'se-ron ([F.] *tierce*, [L.] *tertius*, third). See *Mulatto*. **T., black**, see *Mulatto*.

Terebdellum, ter-eb-del'lum (*teras*, *bdella*, a leech). A pneumatic machine which, when connected with a cupping apparatus, largely increases the amount of local depletion. Also an instrument for perforating the fœtal cranium. See *Terebellum*.

Terebella, ter-e-bel'la (*tereo*, to bore). Trepan.

Terebellum, ter-e-bel'lum. Cranial perforator.

Terebene, ter'e-been. $C_{12}H_{16}$. Yellow oily liquid produced by action of sulphuric acid on turpentine. Used chiefly in winter cough, bronchitis, bronchorrhœa, catarrhal disease of the larynx and throat, etc., and also in cystitis, flatulent dyspepsia, and respiratory diseases by injection or inhalation; expectorant. Externally, in watery solution, it is employed for dressing wounds.

Terebinthina, ter-e-bin'thin-ah (*terebinthos*, the turpentine tree). *Turpentine*, *Botin*, *Albotin*, *Altilibat*, *Brutino*. Substance of the consistence of honey which flows from many trees of the Terebinthinaceæ and Coniferæ families, composed of resin and essential oil, without benzoic acid. See *Pinus sylvestris*. All the turpentines are stimulant, diuretic, and cathartic. Terebinthina (Ph. U. S.) is the concrete oleoresin of Pinus australis and other species of Pinus; also the juice of Pinus australis and other species of Pinus. **T. Argentoraten'sis**, see *Pinus picea*. **T. balsame'a**, see *Pinus balsamea*. **T. Canaden'sis**, see *Pinus balsamea*. **T. Chi'a**, see *Pistacia terebinthus*. **T. coc'ta**, Strasburg turpentine boiled in water until solidification occurs on cooling. **T. commu'nis**, see *Pinus sylvestris*. **T. copaïf'era**, copaiba. **T. cyp'ria**, see *Pistachia terebinthus*. **T. empyreumat'ica**, see *Pinus sylvestris*. **T. larici'na**, see *Pinus larix*. **T. pistach'ia**, Pistacia terebinthus. **T. vene'ta**, see *Pinus larix*. **T. ve'ra**, see *Pistacia terebinthus*. **T. vulga'ris**, see *Pinus sylvestris*.

Terebinthinate, ter-e-bin'thin-ate. Having the qualities of, or impregnated with, turpentine.

Terebin'thine. A hydrocarbon resembling terebene in composition, resulting from distilling oil of turpentine with an alkali. **T. hy'drate**, terpene hydrate.

Terebinthus, ter-e-bin'thus (*terebinthos*). Terminthus. **T. gummif'era**, Bursera gummifera. **T. lentis'cus**, Pistacia lentiscus. **T. vulga'ris**, Pistacia terebinthus.

Terebra, ter'e-brah (*tereo*, to bore). Trepan.

Terebration, ter-e-bra'shun (*terebro*, to bore). Trepanning. Puncturing of a bone by any instrument. A pain is said to be *térébrant* (F.) when it seems as if the part was penetrated or bored.

Tere'do os'sium (*tereo*, to bore). Caries; spina ventosa.

Teres, ter'ees (long and round, from *tero*, to rub, rubbed smooth or rounded). Epithet given to many organs the fibres of which are collected into round fasciculi. **T. ligamen'tum**, round ligament in the cotyloid cavity of the os innominatum, attached to the head of the bone and to the bottom of the cavity. A small fibrous fascia extending from the coronoid process of the ulna to below the bicipital tubercle of the radius. Round ligament of the uterus. **T. ma'jor**, muscle situate at the inferior and posterior part of the shoulder; attached, on the one hand, to the outer surface of the scapula, to the corresponding part of its axillary margin; and, on the other, to the posterior margin of the bicipital groove of the humerus. It carries the arm backward and inward, and also inward in rotation. When it acts with the longissimus dorsi and pectoralis major it applies the arm against the lateral part of the chest and keeps it forcibly there. **T. min'imus**, accessory muscle of T. minor, arising from axillary margin of scapula and inserted into upper portion of humerus. **T. mi'nor**, muscle situate at the posterior and inferior part of the shoulder; narrow and flattened from above to below in its inner half, and from before to behind in the outer. Attached, on the one hand, to the outer surface of the scapula, near the inferior angle; and, on the other, to the inferior part of the great tuberosity of the humerus. It depresses the arm, and causes it to turn on its axis from within outward; it also carries it backward.

Teresis, ter'a-sis (*teresis*). Observation.

Teretipronator, ter-a-te-pro-nah'tor. Pronator radii teres.

Teretiscapularis, ter-a-te-scap-u-lah'ris. Teres major.

Teretrium, ter-et're-um (*tereo*, to bore). Trepan.

Teretron, ter-et'ron (*teretron*). Trepan.

Tergal, tur'gal (*tergum*, the back). Dorsal.

Tergemini, tur-jem'in-e. Trigemini.

Tergum, tur'gum. Dorsum; vertebral column.

Termatic (tur-mat'ik) **ar'tery.** Branch of anterior cerebral or anterior communicating artery to lamina cinerea.

Terminal, turm'in-al. Relating to the end. **T.**

ar'teries, those that do not anastomose before ending in the capillaries. **T. cav'ities**, see *Lung*. **T. frames of Dei'ters**, plates in reticular lamina of organ of Corti. **T. ven'tricle**, dilatation of central canal of spinal cord in conus medullaris.

Terminalia, tur-min-al'e-ah. See *Myrobalanus*.

Terminology, tur-min-ol'o-je (*terma*, term, *logos*, discourse). Nomenclature.

Terminthus, tur-min'thus (*terminthos*, turpentine tree). *Berry* or *Fungous carbuncle*. Name given by the ancients to a tumor surmounted by a black pustule, resembling the fruit of the turpentine tree; also Pistacia terebinthus.

Terminus (tur'min-us) (limit) **supe'rior as'peræ arte'riæ**. Larynx.

Terms (periods). Menses.

Ternary, tur'nar-e (*ter*, thrice). Pertaining to or consisting of three.

Terpene (tur'peen) **hy'drate**. Obtained by hydration from terebinthine. Used in whooping cough and hay asthma, and locally as an application in diphtheria.

Terpenes, tur'peens. Term applied to various isomeric hydrocarbons of the composition $C_{10}H_{16}$; principal constituents of a number of essential oils, as of turpentine, juniper, lemon, lavender, etc.

Terpine, tur'peen. Crystalline substance derived from terpine hydrate by action of heat. **T. hy'drate**, crystalline substance formed by union of turpentine oil and water; used as an expectorant in bronchitis, whooping cough, and also in chronic nephritis; antiseptic. **T. i'odide**, antiseptic used in acute affections of the lung, in acute affections of the throat, in spray, or internally in doses of ten drops on sugar.

Terpin'eol. $C_{10}H_{17}OH$. An alcohol used for deodorizing iodoform.

Terpinol, tur'pin-ol. Colorless oily liquid produced by acting on terpene hydrate with sulphuric, phosphoric, or glacial acetic acid; used as a stimulant expectorant.

Ter'ra absor'bens minera'lis (absorbent mineral earth). Magnesii carbonas. **T. al'ba**, argilla pura. **T. alu'minis**, argilla pura. **T. ama'ra aëra'ta**, magnesii carbonas. **T. ama'ra sulphu'rica**, magnesii sulphas. **T. argilla'cea hydra'ta**, argilla pura. **T. argilla'cea pu'ra**, argilla pura. **T. baryt'ica**, barium sulphate. **T. bola'ris**, argilla pura. **T. folia'ta**, sulphur. **T. folia'ta minera'lis**, soda acetata. **T. folia'ta tar'tari**, potassii acetas. **T. for'nacum**, see *Bricks*. **T. fullon'ica**, cimolia purpurescens. **T. Japon'ica**, catechu; nauclea gambir. **T. lem'nia**, *Lemnian earth*, name given by the ancients to a solid, reddish, astringent substance, prepared with the pulp of the fruit of the baobab, an African tree; it is an argillaceous earth, and has been employed as an astringent. **T. Livon'ica**, a terra sigillata, or sealed earth, from Livonia; very astringent. **T. mari'ta**, Curcuma longa. **T. Noceria'na**, whitish astringent earth found in the environs of Nocera, Italy. **T. Orlea'na**, *Annotto*, *Arnotta*, pigmental matter obtained from the seeds of Bixa Orleana or Orellana or Americana, Orellana. Recommended in dysentery from its astringent and stomachic qualities. It is called, according to its shape, flag, roll, or egg annotto. Spanish annotto is in small oblong cakes; it is chiefly employed as a coloring matter, as for butter. **T. os'sea**, bony matter; the earthy portion of bones. **T. pondero'sa**, baryta. **T. pondero'sa muria'ta**, baryta, muriate of. **T. pondero'sa sali'ta**, baryta, muriate of. **T. Portugal'lica**, a reddish, astringent, styptic earth from Portugal. **T. sapona'ria**, cimolia purpurescens. **T. sigilla'ta** (*sigillatus*, furnished with little figures), *Sealed earth;* bole or earthy matter made into little cakes or flat masses and stamped with certain impressions, as with the head of the Grand Seignior; to these belong the terra Silesiaca, T. Lemnia, T. Turcica; see *Bole* and *Bolus alba*. **T. Silesi'aca**, see *Terra sigillata*. **T. talco'sa oxyanthraco'des**, magnesii carbonas. **T. Tur'cica**, see *Terra sigillata*. **T. uri'næ**, the earthy deposit in urine. **T. vitri'oli dul'cis**, colcothar.

Ter'ræ o'leum. Petroleum.

Terrain' cure (F.). Treatment of nervous and wasting diseases by mountain air, proper diet, etc.

Ter'rapin. Emys palustris.

Ter'ritory, cell. See *Cell*.

Ter'rors, night. See *Night terrors*.

Ter'sor ani. Latissimus dorsi.

Tertian, tur'shun (*tertius*, third). Occurring every third day. **T. fe'ver**, *Tertian* or *Third-day ague*, *Third-day fever;* an intermittent whose paroxysms recur every third day, or every 48 hours; a manageable form of ague. A *double tertian* has a paroxysm every third day, the paroxysms of alternate days being associated.

Tertiana'ria (from its virtues in tertian fever). Scutellaria galericulata.

Tertiary, tur'she-a-re (*tertius*, third). Third in order; term usually employed to designate the third or later stages of syphilis.

Tescalama. Resinous drug used in Mexico, obtained from a variety of fig.

Tessara, tes'sar-ah (*tessara*, four). Cuboid.

Tessella, tes-sel'lah (dim. of **Tessera**, a small quadrangular stone for paving, etc.). Tablet.

Tess'ellated (*tessellatus*, furnished with small quadrangular stones). Having a quadrangular arrangement, like a pavement. See *Epithelium*.

Tes'sera (a quadrangular stone). Cuboid.

Test (*testis*, a witness). Method of ascertaining a fact by experiment. Also material used in such method. **T., Dan'iel's**, see *Docimasia pulmonum*. **T., hydrostat'ic**, see *Docimasia pulmonum*. **T. pa'per**, paper charged with reagent for use in chemistry. **T., Ploucquet's**, see *Docimasia pulmonum*. **T., sta'tic**, see *Docimasia pulmonum*. **T. tube**, tube made of thin glass, closed at one end, capable of withstanding high degree of heat. **T. types**, printed matter in type of various sizes, employed by the oculists to determine the acuteness of vision.

Tes'ta (a shell). See *Ostrea*. **T. o'vi**, see *Ovum* and *Membrana putaminis*. **T. præpara'ta**, *Prepared oyster-shell*. Oyster-shell freed from extraneous matter, washed with boiling water, reduced to powder, and prepared in the same manner as creta præparata.

Testa'ceous (*testa*). Powder consisting of burnt shells, containing carbonate of calcium chiefly; hence has been applied to cretaceous substances. See *Creta*.

Tes'tæ os'treæ. See *Ostrea*.

Testament'ary capac'ity. Term used in legal medicine to indicate ability to make a valid will.

Test'er, lung. See *Lung-tester*.

Tes'tes (pl. of **Testis**, a witness). The testicles. See *Testicle*. Inferior tubercles of the corpora quadrigemina. See also *Quadrigemina tubercula*. **T. mulie'bres**, see *Ovarium*.

Testibrachium, tes-te-brak'e-um. Superior peduncles of the cerebellum.

Testicle, tes'te-cal (dim. of **Testis**, a witness, because the testicles are witnesses of virility). Name of two glandular organs contained in the scrotum, whose office is to secrete sperm. Their substance, pulpa testis, consists of numerous conical, flattened lobules—lobuli testis—whose bases are directed toward the surface of the organ, and the apices toward the corpus Highmorianum. They are formed of a gray and softish substance, composed of tortuous canals, called tubuli or canaliculi or ductus seminiferi or seminales, vasa seminalia, vascula serpentina, folded on each other, and of extreme fineness. All these canals, uniting in their course, pass through the corpus Highmorianum, concur in forming the epididymis, and give origin to the vas deferens. The testicles are covered by a fibrous membrane, of an opaque white color and very tough, called tunica albuginea, dura mater testis, or simply albuginea, peritestis, of which the corpus Highmorianum is only an enlargement. See *Albuginea*. Over this, again, is the tunica vaginalis, the second envelope of the testis. See *Vaginal coat of the testicle*. **T., can'cer of**, see *Sarcocele*. **T., cys'tic disease of**, see *Sarcocele*. **T., fun'gus of, benign'**, hernia testis. **T.,**

gran'ular swell'ing of, hernia testis. **T., her'nia of,** hernia testis. **T., ir'ritable,** abnormal sensibility of that organ, which is painful on manipulation; termed also chronic neuralgia of the testicle; see *Orchidalgia.* **T., retained,** see *Crypsorchis.* **T., swelled,** hernia humoralis.

Testicondus, tes-te-kon'dus (*testis, condo,* to hide). One in whom the testes have not descended into the scrotum.

Testicular, tes-tik'u-lar. Belonging or relating to the testicle. **T. ar'teries,** spermatic arteries. **T. veins,** spermatic veins.

Testiculus, tes-tik'u-lus. Testicle. **T. accesso'rius,** epididymis. **T. cani'nus,** orchis mascula.

Tes'tis. Testicle. **T. fœmine'us,** ovary. **T., ir'ritable,** orchidalgia; irritable testicle. **T. mi'nor,** prostate. **T. mulie'bris,** ovary. **T. viri'lis,** testicle.

Testitis, tes-te'tis (*testis, itis*). Hernia humoralis.

Testudinatio cranii, tes-tu-din-ah'she-o cran'e-e (arched like the back of a tortoise, *testudo*). Fracture of the skull, in which the fragments are placed so as to form a vault.

Testudo, tes-tu'do (*testa,* a shell). A genus of reptiles, including the turtle, the flesh of which is much esteemed as an article of diet. Also an encysted tumor supposed to resemble the shell of a testudo. See *Talpa.* **T. cer'ebri,** fornix. **T. scap'ulæ,** see *Scapula.*

Tetanic, te-tan'ik. Relating to or resembling tetanus. Epithet for a tonic convulsion. A remedy which acts on the nerves, and, through them, on the muscles, occasioning, in large doses, convulsions. The chief agents in this class are nux vomica, strychnia, brucia, arnica, and toxicodendron.

Tetaniform, te-tan'e-form. Resembling tetanus.

Tetanilla, tet-an-il'lah (dim. of **Tet'anus**). A paroxysmal disease which affects the hands, arms, or lower limbs, unattended with pain or fever or unconsciousness. In graver cases the whole body becomes implicated. It has been called, also, tetany, intermittent tetanus, idiopathic contraction and paralysis, idiopathic muscular spasm, contraction of the extremities, and intermittent rheumatic contractions.

Tetanin, tet'an-in. Strychnia. Tetanine.

Tetanine, tet'an-een (*tetanus*). Term proposed to designate the specific poisonous principle by which tetanus is produced. See *Bacillus tetani.* A ptomaïne, $C_{13}H_{30}N_2O_4$, derived from cultivation of impure tetanus microbes; it produces tetanic symptoms in experiments on animals.

Tetanium, tet-an'e-um. Strychnia.

Tetanization, tet-an-iz-a'shun. The production or condition of tetanic spasms, in which the patient is said to be tetanized.

Tetanode, tet'an-ode. Tetanoid.

Tetanoid, tet'an-oid. Tetaniform. **T. fe'ver,** cerebro-spinal meningitis. **T. paraple'gia,** anterolateral spinal sclerosis.

Tetano'mata (*tetanomata*). Tetanothra.

Tetanomotor, tet-an-o-mo'tor (*tetanus, motor,* mover). Instrument for exciting tetanus of muscles by electricity.

Tetanothra, tet-an-o'thra (*tetanus,* stretched free from wrinkles). Medicines which remove wrinkles.

Tetanotoxine, tet-an-o-toks'een (*tetanus, toxicon,* poison). Ptomaïne obtained from culture-medium in which tetanus bacillus has grown; produces tetanic effects, afterward paralysis and convulsions.

Tetanus, tet'an-us (*tetanos,* stretched). Spasm with rigidity. A disease consisting in a permanent contraction of all the muscles, or merely of some, without alternations of relaxation; characterized by closure of the jaws; difficulty or impracticability of deglutition; rigidity and immobility of the limbs and trunk, which is sometimes curved forward (*Emprosthotonus*), sometimes backward (*Opisthotonus*), sometimes to one side (*Pleurothotonus*). When confined to the muscles of the jaws it is called *Trismus.* Traumatic tetanus is that which supervenes on a wound. When occurring in the puerperal condition it is called *Puerperal tetanus,* tetanus puerperarum, supposed to be due to a bacillus. Tetanus of single muscles does not imply necessarily the general disease or the action of the specific cause. A specific micro-organism is credited with the production of the disease. See *Bacillus tetani.* **T. anti'cus,** emprosthotonus. **T. dolorif'icus,** cramp. **T. dorsa'lis,** opisthotonus. **T. hydropho'bicus,** spasm in deglutition imitating that of hydrophobia; may be due to injury of nerves interested in that region. **T., intermit'tent,** tetanilla. **T. latera'lis,** pleurothotonus. **T. maxil'læ inferio'ris,** trismus. **T. neonato'rum,** trismus nascentium. **T. postergan'eus,** opisthotonus. **T. posti'cus,** opisthotonus. **T., puer'peral** or **puerpera'rum,** see *Tetanus.* **T., traumat'ic,** that form of tetanus which supervenes on a wound. **T. universa'lis,** see *Tetanus.*

Tetany, tet'an-e. Tetanilla.

Tetartæ'us (*tetartaios,* occurring on the fourth day). Quartan.

Tetartophu'ia (*tetartos,* the fourth, *phuo,* to arise). A quartan in which the intermission is inordinately short or imperfect.

Tete, teat. Nipple.

Tet'ra (*tetra,* four). In composition, four.

Tetrabrachius, tet-rah-brak'e-us (*tetra, brachion,* arm). Monster having four arms.

Tetrachirus, tet-rah-ke'rus (*tetra, cheir,* hand). Monster having four hands.

Tetrachlormethane, tet-rah-klor-meth'ane. Carbon tetrachloride.

Tetradrachmon, tet-rah-drak'mon (*tetra, drachme,* a drachm). Weight of four drachms or half an ounce.

Tet'rads (*tetra,* four). Groups of micrococci developing in fours.

Tetragonum lumbale, tet-rah-go'num lum-bal'e. Space in lumbar region of irregular rhomboidal form, covered by aponeurosis of latissimus dorsi, limited externally by posterior edge of origin of external oblique, internally by edge of sacrospinalis, above by serratus posticus inferior, below by superior edge of internal oblique.

Tetragonus, tet-rah-go'nus (*tetra, gonia,* an angle). Platysma myoides.

Tet'rahit longiflo'rum. Galeopsis grandiflora.

Tetrahydroparachinan'isol. Thalline.

Tetrahydroparamethyloxyquinoline (tet-rah-hidro-par-am-eth-il-oks-e-quin'o-leen) or **Tetrahydroparaquinisol,** tet-rah-he-dro-par-ah-quin'is-ol. Thalline.

Tetraiodopyrrol, tet-rah-e-o-do-pyr'rol. Iodol.

Tetramasthus, tet-rah-mas'thus (*tetra, masthos,* a breast). Having four breasts.

Tetramazia, tet-rah-maz'e-ah (*tetra, mastos,* breast). Having four breasts.

Tetramethylammo'nium hy'drate. Hydrochlorate of trimethylamine is a caustic externally. Has been used internally, much diluted, as an antiarthritic and antipyretic.

Tetramethyldiamidotriphenylcarbinol ox'alate. Malachite green.

Tetramethylthionine (tet-rah-meth-il-the'o-neen) **chlo'ride.** Methylene blue.

Tetram'yron (*tetra, muron,* an ointment). Ointment consisting of four ingredients.

Tetrangu'ria. Cucurbita citrullus.

Tetranophthalmus, tet-ran-of-thal'mus (*tetra, ophthalmos,* eye). Monster having four eyes.

Tetranopsia, tet-ran-op'se-ah (*tetra, ops,* eye). Contraction of one quadrant of the visual field.

Tetranthe'ra Califor'nica (*tetra, anthera,* anther). Umbellularia Californica. **T. pichu'rim,** pichurim beans.

Tetrapharmacum, tet-rah-far'mak-um (*tetra, pharmakon,* a medicine). Medicine consisting of four ingredients.

Tetrapodous, tet-rah'po-dus (*tetra, pous,* foot). Having four feet.

Tetrapus, tet'rah-pus (*tetra, pous,* foot). Having four feet.

Tetrascelus, tet-ras'ke-lus (*tetra, skelos,* leg). Monster having four legs.

Tetraster, tet-ras'ter (*tetra, aster,* star). Figure presented during karyokinesis when the nucleus undergoes fourfold division.

Tetrastoma (tet-ras'to-mah) **rena'le.** See *Parasites.*

Tetratox'in. Ptomaïne from culture of bacillus of tetanus, producing paralysis and convulsions.

Tetrethyldiamidotriphenylcarbinolox'alate. A bright green crystalline body giving blue color on solution in water; hydrochloric acid converts the green-blue solution to a green; hence used in testing acidity of the gastric juice.

Tetrobolon, tet-rob'o-lon (*tetra, obolos*). The weight of four oboli or two scruples.

Tet'ronal. Allied in composition to Sulphonal; hypnotic. Chemically it is a diethylsulphone-diethylmethane.

Tetroros, tet-ro'ros (*tetroros*). Astragalus.

Tet'ter. Herpes. **T., crust'ed,** impetigo. **T., eat'ing,** lupus. **T., hon'eycomb,** porrigo favosa. **T., hu'mid,** eczema impetigo. **T., milk'y,** porrigo larvalis. **T., moist,** eczema. **T., pus'tular,** impetigo. **T., run'ning,** impetigo. **T., sca'ly,** psoriasis.

Tetterwort, tet'er-wort. Chelidonium majus.

Teucrin, tu'krin. See *Teucrium scordium.*

Teucrium Ægyptiacum, tu'kre-um e-gip-te'ak-um (*teukrion,* after Teucer). T. capitatum. **T. be'lium,** T. capitatum. **T. Canaden'se,** American germander or woodsage; aromatic and stimulant indigenous herb. **T. capita'tum,** *Poley mountain of Montpellier,* ord. Labiatæ, is generally substituted for T. chamædrys. The common Poley mountain is the Teucrium montanum; and the golden Poley mountain the Teucrium polium, Polion. **T. chamæ'drys,** *Common, Creeping,* or *Small germander, English treacle;* plant possessed of aromatic and bitter properties. **T. chamæ'pitys,** *Common groundpine;* properties like the last; the tops and leaves have been recommended as aperients and tonics, especially in female obstructions and in paralytic disorders. **T. Cre'ticum,** *Poley mountain of Candy;* the tops and whole herb enter into the old compounds mithridate and theriaca. It is placed among the aperients and corroborants. **T. fla'vum** has similar properties to T. chamædrys. **T. hyssopifo'lium,** T. Creticum. **T. i'va,** *French groundpine;* it has similar properties to T. chamæpitys, but is weaker. **T. marit'imum,** T. marum. **T. ma'rum,** *Syrian herb mastich, Cat thyme;* a very aromatic plant of a camphorated smell; formerly much used in medicine as a tonic, antispasmodic, emmenagogue, etc. **T. officina'le,** T. chamædrys. **T. palus'tre,** T. scordium. **T. po'lium,** used in the East for cholera. **T. pyramida'le,** ajuga. **T. rosmarinifo'lium,** T. Creticum. **T. scor'dium,** *Water germander, Woodsage;* the leaves have a garlicky smell and bitterish, slightly pungent taste. It has the tonic properties of other Teucria. The principle *Teucrin,* derived from it, has been employed subcutaneously in cold tuberculous abscesses, tuberculous infiltrations, etc.

Tex'as cat'tle fe'ver. Specific infectious disease affecting horned cattle, the lesions being inflammation of the fourth stomach and engorgement of the spleen. **T. mange,** eczema, scabies, or pruritus. **T. rhat'any,** root of Krameria secundiflora. **T. sarsaparil'la,** Menispermum Canadense. **T. snake'root,** Aristolochia reticulata.

Textum interlobula're, tex'tum in-ter-lob-u-la're (*texo,* to weave). Interlobular tissue.

Textura, tex-tu'ra. Texture. **T. organ'ica,** organized tissue.

Textural, tex'tu-ral. Relating or appertaining to a texture.

Texture, tex'ture (*texo,* to weave). Particular arrangement of the tissues that constitute an organ.

Tex'tus. Texture; tissue. **T. cellulo'sus,** cellular tissue. **T. desmo'sus,** desmoid tissue. **T. erecti'lis,** erectile texture. **T. nervo'rum,** plexus nervorum. **T. organ'icus,** cellular tissue. **T. papilla'ris,** corpus papillare. **T. parenchyma'lis,** cellular tissue.

Thæria, the're-ah (*ther,* a wild animal). Radzyge.

Thalamencephalon, thal-a-men-sef'al-on (*thalamos, bed, en,* in, *kephale,* head). Portion of embryonic brain developed from posterior division of anterior cerebral vesicle; includes ophthalmic pituitary body, pineal gland, and optic nerves.

Thal'ami cor'porum cavernoso'rum pe'nis. See *Cavernous bodies.* **T. nervo'rum optico'rum** or **ner'vi op'tici,** *Optic thalami, Posterior cerebral ganglia,* two rounded, irregular surfaces seen exposed in the lateral ventricles of the brain and in the third ventricle, the inferior surface of which presents two projections, called corpora geniculata, that furnish several filaments to the optic nerves. The name was given from a belief that the optic nerves originate from them. They, however, arise more posteriorly from the corpora quadrigemina or optic lobes, and adhere merely to the inner margin of those lobes. From the thalami and corpora striata fibres proceed upward to constitute the convolutions of the brain and the various bands that connect the different parts of the brain together. The upper and inner parts of the thalami are so closely connected as to form one continued surface, called *commissura mollis.* The posterior parts turn downward and upward, after which they are elongated to form the two white cords termed *tractus optici.*

Thalamic (thal'a-mic) **nu'clei.** Two collections of gray matter in the optic thalami.

Thalamus, thal'am-us (*thalamos,* room or chamber, bed). The place in which a nerve originates. **T. op'ticus,** see *Thalami optici.* **T. rega'lis,** pericardium.

Thalassolutrum, thal-as-so-lu'trum (*thalassa,* sea, *loutron,* a bath). Sea-bath.

Thalassomeli, thal-as-som'el-e (*thalassa,* sea, *meli,* honey). Cathartic medicine composed of equal parts of sea-water, honey, and rain-water, exposed to the sun during the dog days in a pitched vessel.

Thalictron, thal-ik'tron (*thaliktron*). *Thalictrum, Meadow rue, Poor man's rhubarb,* ord. Ranunculaceæ. The root resembles rhubarb in its properties.

Thalictrum anemonoïdes, thal-ik'trum an-em-on-o-e'dees. *Meadow rue, Rue-leaved anemony.* An indigenous plant.

Thalline, thal'leen. Oily, odorous liquid, synthetically produced sulphate and tartrate of which have been used for their antipyretic and antiseptic properties. They are yellowish-white crystalline powders, and used both externally and internally.

Thallium, thal'le-um (*thallus,* a green bud or shoot). Metal found in certain seleniferous and telluriferous deposits, in the native sulphur of Lipari, etc., and resembling lead physically in its aspect, color, density, etc., as well as in its toxical action on the economy. The salts of thallium, especially the nitrate, are very soluble.

Thallochlor, thal'lo-chlor. Variety of chlorophyll existing in lichens.

Thallus, thal'lus (a shoot). Condition of the filaments of a fungus when, by excessive multiplication and interweaving, they become matted together.

Thamarindus, tham-ar-in'dus. Tamarindus.

Thanasimus, than-as'im-us (*thanatos,* death). Mortal.

Than'atic or **Thanat'icus** (*thanatos,* death.) Relating or appertaining to death. *Thanatici morbi* are fatal affections, usually from violence.

Thanatodes, than-at-o'dees (*thanatodes*). Mortal.

Thanatognomonic, than-at-o-no-mon'ik (*thanatus, gignosko,* to know). Characteristic of death, as a thanatognomonic sign.

Thanatoid, than'a-toid (*thanatus, eidos,* resemblance). Resembling death. Apparently dead.

Thanatological, than-a-to-loj'ik-al (*thanatus, logos,* a treatise). Relating or appertaining to thanatology.

Thanatology, than-a-tol'o-je (*thanatus, logos,* a discourse). A treatise on, or the doctrine of, death.

Thanatometer, than-a-tom'e-tur (*thanatus, metron,* measure). Thermometer introduced into cavities of the body as a means of determining death based on this mode of expression of the reduced temperature.

Thanatophidia, than-at-o-fid'e-ah (*thanatus, ophis,* serpent). Poisonous serpents whose bites are fatal.

Thanatophobia, than-at-o-pho'be-ah (*thanatus, phobos,* dread). Morbid fear of death.

Thanatosis, than-at-o'sis (*thanatus*). State of death. Mortification; gangrene.

Thanatus, than'at-us (*thanatos*). Death.

Thapsia, thap'se-ah (from the island of Thapsus). *Deadly carrot,* family Umbelliferæ. The bark of the root operates violently both upward and downward. **T. gargan'ica,** root of N. African plant used as a counter-irritant. **T. plas'ter,** composed of yellow wax, Burgundy pitch, terebinthina cocta, Venice turpentine, glycerin, and thapsia resin. **T. res'in,** prepared by digesting thapsia root in hot alcohol. **T. silph'ium,** N. African plant; six to ten grains of the powder produce several alvine evacuations.

Thapsium actæifolium, thap'se-um ak-te-e-fo'le-um (after the isle of Thapsus). Ligusticum actæifolium. **T. atropurpu'reum,** roundheart. **T. barbino'de,** *Meadow parsnep,* an indigenous plant of the Northern and Western States. Both these plants have been esteemed vulnerary, antisyphilitic, and diaphoretic, and as antidotes to the bite of a rattlesnake. **T. corda'tum,** T. atropurpureum.

Thapsus barbatus, thap'sus bar-bat'us. Verbascum nigrum.

Tharsi, thar'se. See *Tarsus.*

Thaumatrope, thow'ma-trope (*thauma,* wonder, *trope,* change). Revolving instrument containing figures which blend when the instrument is in motion. It shows the duration of visual impressions.

Thea, the'a (Chinese *tcha*). Tea. There are two principal varieties of tea-plant or Thea Sinensis, the Thea bohea and Thea viridis, the black tea and the green. Ord. Camelliaceæ. In commerce many kinds of tea are met with. Several of the differences between these appear to result from the age at which the leaves have been collected and the mode of desiccation. It is not unfrequently adulterated. Tea is astringent, and gently excitant in nervous headache, etc. By analogical transference the word tea has been used almost synonymously with infusion—as beef tea, mint tea, etc. **T. German'ica,** veronica.

Thebaina, the-ba'in-ah. Thebaine. Alkaloid of opium. Paramorphia. See *Opium.*

Thebe'sius, veins of. Name given to supposititious branches of the coronary veins, described as opening into the heart by small depressions observable in the right auricle, and which have been called foramina Thebesii. No such veins can be demonstrated. The valve at the orifice of the coronary vein, in the right ventricle, is called valvula Thebesii, valvula Guiffartiana, valvula venæ magnæ, valve of Thebesius.

Thebolactic (the-bo-lak'tik) **acid.** Acid found in opium, identical with lactic acid.

Theca, tha'kah (*theke*). Case; vagina; sheath. **T. cer'ebri,** cranium. **T. cor'dis,** pericardium. **T. follic'uli,** see *Folliculi Graafiani.* **T. vertebra'lis,** see *Vertebral canal.*

Thecal, the'kal (*theca,* a sheath). Relating or appertaining to a sheath, as of a tendon.

Thecitis, tha-se'tis (*theca, itis*). Term of hybrid formation, signifying inflammation of the sheath of a tendon.

Thecostegnosis, the-co-steg-no'sis (*theke,* sheath, *stegnoo,* to constrict). Contraction of tendon-sheath.

The'ine. $C_8H_{10}N_4O_2$. Crystallizable principle from thea, having the same composition as caffeine. See *Coffea Arabica.*

Theion, thi'on (*theion*). Sulphur.

Theiopegæ, thi-o-pa'ge (*theion, pege,* a spring). Sulphureous mineral waters.

Theiothermæ, thi-o-thur'me (*theion, therme,* heat). Waters, mineral, sulphureous.

Thelalgia, thel-al'je-ah (*thele,* nipple, *algos,* pain). Pain in the nipple.

Thelasis, thel-as'is (*thelazo,* to give suck). Lactation.

Thelasmus, thel-as'mus (*thelasmos*). Lactation.

Thelastria, thel-as'tre-ah (*thelastria*). Nurse.

Thele, tha'la (*thele*). Mamma; nipple.

Thelitis, thel-e'tis (*thele, itis*). Inflammation of the nipple.

Thelium, tha'le-um (*thele*). Papilla-layer of cells.

Theloncus, thel-on'kus (*thele, onkos,* a swelling). Tumor or swelling of the breast.

Thelophlebostemma, thel-o-fle-bos-tem'mah (*thele, phleps,* a vein, *stemma,* a wreath). Venous circle formed by union of veins around the nipple.

Thelorrhagia, thel-or-rhaj'e-ah (*thele, rhage,* a rupture). Hemorrhage from the nipple.

Thelosteophytum, thel-os-te-o-fe'tum (*thele, osteon,* bone, *phuton,* growth). Nipple-shaped osteophyte.

Thelothism, the'lo-thizm (*thele, otheo,* to thrust). Projection of the nipple.

Thelyblasts, the'le-blasts (*thelus,* life-giving, *blastos,* a bud). Term used to denote seminal parent-cells and mature ova.

Thelygonia, thel-e-go'ne-ah (*thelus,* female, *gone,* generation). The part taken by the female in the act of generation. The procreation of female children. Also nymphomania.

Thelygonum, thel-e-go'num (*thelus,* female, *gone,* sperm). Sperm (of the female).

Thelyp'teris (*thelus,* female, *pteris*). Pteris aquilina.

Thelytocia, thel-e-to-se'ah (*thelus,* female, *tokos,* birth). Parthenogenesis with female eggs only.

Thenad, the'nad. Thenar.

Thenal, the'nal. Thenar. Relating or appertaining to the thenar. **T. as'pect,** aspect toward the side on which the thenar is situated. *Thenad* is used adverbially to signify toward the thenal aspect.

Thenar, the'nar (*theno,* to strike, to push). The palm of the hand or sole of the foot. Flexor brevis pollicis manûs. Palm. **T.** (or **The'nal**) **em'inence,** the projection at the anterior and outer part of the hand formed by the abductor brevis, opponens, and flexor brevis pollicis. **T.** (or **The'nal**) **mus'cle,** fleshy mass, formed of the abductor brevis, opponens pollicis, and the interior part of the flexor brevis pollicis. In the foot the name is applied to the abductor and flexor brevis pollicis pedis.

Theobroma (the-o-bro'mah) **ca'cao** (*theos,* god, *broma,* food). Cacao.

Theobromina, the-o-bro'min-ah. Theobromine. A substance obtained from the cocoanut, resembling caffeine, but more bitter and less soluble.

Theobromine, the-o-bro'meen. $C_7H_8N_4O_2$. Alkaloid from seeds of Theobroma cacao, homologous with caffeine. White powder, with therapeutic properties similar in many respects to caffeine. The salts thus far known are T. lithium and lithium salicylate and T. sodium and sodium salicylate. Diuretic in cardiac affections and dropsical effusions.

Theoma'nia (*theos,* god, *mania*). Demonomania.

Theophylline, the-o-fil'lin (*thea,* tea, *phullon,* leaf). Alkaloid from tea, isomeric with theobromine.

Theoplegia, the-o-plej'e-ah (*theos,* god, *plege,* a stroke). Apoplexy.

Theoplex'ia (*theos,* god, *plesso,* to strike). Apoplexy.

Theoret'ical (*theoreo,* to contemplate). That which is confined to theory or connected with it. Also applied to a sect of physicians who founded their doctrine chiefly on reasoning.

The'ory. The speculative part of a science; the connection established in the mind between a general fact, or the least possible number of general facts, and all the particular facts dependent thereon. Theory must not be confounded with system: theory regards nature as it is, and is a rigid deduction from facts; system is too often the creature of the imagination, to which nature is made to bend. **T. of med'icine,** *Institutes of medicine, Theoretical medicine;* that part of the science which attempts philosophically to account for the various phenomena that present themselves during health as well as in disease; the philosophy of medicine. The institutes of medicine are generally considered to comprise physiology and its applications to pathology, hygiene, and ther-

apeutics; by some they are considered to include general pathology and general therapeutics.

Therapeia, ther-ap-i'ah (*therapeia*). Curation; therapeutics.

Therapeusis, ther-ap-u'sis. Therapeutics.

Therapeu'ta, Therapeu'ter, or **Therapeu'tes** (*therapeutes*). Therapeutist.

Therapeutical, ther-a-pu'tik-al. Relating or appertaining to therapeutics.

Therapeutics, ther-ap-u'tiks (*therapeuo*, to wait upon, to alleviate, to attend upon the sick). The practice of medicine. That part of medicine the object of which is the treatment of disease.

Therapeu'ticus. Therapeutical.

Therapeutist, ther-ap-u'tist. One who practises therapeutics; a practitioner of medicine.

Therapia, ther-ap-e'ah (*therapeia*). Therapeutics.

Therencephalus, ther-en-sef'al-us (*ther*, beast, *kephale*, head). Skull whereof angle made by lines from inion and nasion to hormion measures from 116° to 129°.

Thereobroma, ther-e-o-bro'mah (*theros*, summer, *broma*, food). Summer dietary.

Theria, the're-ah (*ther*, a wild animal). Radzyge.

Theriac, ther'e-ak. Theriaca.

Theriaca, ther-e'ak-ah (*ther*, a ferocious or venomous animal). *Treacle, Molasses.* Medicine believed to be capable of curing or preventing the effects of the bite of a venomous animal. Theriac and theriacal have been used adjectively for medicinal. **T. Androm'achi,** *Venice treacle;* an ancient alexipharmic electuary, consisting of a farrago of 61 different ingredients, which possessed the most opposite properties; invented by Andromachus of Crete, and prepared by order of Nero. **T. articulo'rum,** colchicum. **T. celes'tis,** tinctura opii. **T. commu'nis,** molasses. **T. Edinen'sis,** confectio opii. **T. Germano'rum,** an extract or rob prepared from juniper berries; used as a stomachic. **T. Londinen'sis,** a cataplasm of cumin seed, bay berries, germander, snakeroot, cloves, honey, and sometimes opium or syrup of poppies. **T. rustico'rum,** allium.

Theri'aki. In Turkey opium-eaters are so called.

Theriatrica, ther-e-at'rik-ah (*ther*, an animal, *iatreia*, medicine). Veterinary art.

Theriocatarrhus, ther-e-o-kat-ar'rhus (*theros*, summer, *katarrho*, to overflow). Hay fever.

Theriodes, ther-e-o'daze (*ther*, a venomous animal, *odes*). Ferine.

Therioma, ther-e-o'mah (*ther*, a venomous animal, *oma*). *Therion.* Any extremely malignant ulcer. Sometimes confined to ulcers of the lungs.

Theriomor'phia. Theromorphia.

The'rion. Therioma.

Theriotomy, ther-e-ot'o-me (*ther*, an animal, *temno*, to cut). Zootomy.

Therma, thur'mah (*therme*). Heat. **T. em'phytum,** animal heat.

Thermæ, thur'me (pl. of **Therma**) (*thermai*). Warm baths or springs. See *Waters, mineral.*

Thermæsthe'sia (*therme*, heat, *aisthesis*, sensation). Sensation of heat. An instrument for measuring the sensibility of various parts of the skin to heat is called a *Thermæsthesiometer.*

Ther'mal (*therme*). Relating or appertaining to heat. Hot, warm, as a thermal mineral water. **T. atax'ia,** loss of heat-regulating power of the body. **T. fe'ver,** form of fever occurring during treatment by hot baths. **T. ham'mer,** see *Hammer.* **T. sense,** special division of sensation by which temperature is appreciated.

Therman'tica (*thermantika*). Calefacients.

Thermantidote, thurm-an'te-dote. Febrifuge.

Thermasia, thur-mah'ze-ah (*thermaino*, to grow warm). A making hot; heat.

Thermasma, thur-mas'mah (*thermasma*). Fomentation.

Thermic, thur'mic (*therme*). Relating or appertaining to heat. **T. fe'ver,** sunstroke; see *Coup de soleil* and *Insolation.*

Thermifugin, thur-mif'u-jin (*therme, phugo*, to flee). Methyl-trihydroxylquinoline, carbonate of sodium. Crystalline substance having antipyretic properties.

Thermoanæsthesia, thur-mo-an-ees-the'ze-ah. Loss of part or whole of the thermal sense, or a perversion of it, noticed in hysteria and syringomyelia and other affections dependent on lesions of the cord involving the lateral columns.

Thermocautery, thur-mo-kaw'ter-e (*thermos*, hot, *kauter*, a burner). Instrument for heating platinum instruments by means of vapor of benzine, etc. See *Paquelin.*

Thermochem'istry. The study of the mutual relations and reactions of chemistry and heat.

Ther'mo-electric'ity. Development of electricity through the action of heat; may be used therapeutically in surface thermometry.

Thermogen'esis (*therme*, heat, *genesis*, production). The production or generation of heat.

Thermogenic, thur-mo-jen'ik (*therme, gennao*, to beget). Heat-forming.

Ther'mograph (*therme, grapho*, to write). Instrument for registration of variations of temperature.

Thermohyperæsthesia, thur-mo-hip-er-ees-tha'ze-ah. Abnormal acuteness of the sense of temperature.

Thermohyperalgesia, thur-mo-hip-er-al-ga'ze-ah (*therme, algesia*, sensation of pain). Painful sensation—not sense of temperature—from contact with a hot or cold body.

Ther'mo-inhib'itory. That which prevents excessive heat-production or conservation. Applied theoretically to a portion of the nervous system.

Thermolusia, thur-mo-lu'ze-ah (*therme, luo*, to wash). Warm bath.

Thermolytic, thur-mo-lit'ik (*therme, luo*, to loose). Heat-discharging.

Thermometer, thur-mom'e-tur (*therme, metron*, measure). An instrument with graduated scale for measuring the degree of heat. Mercury is generally used as the liquid in the tube, and several thermometers with differently graduated scales are employed. The Centigrade scale starts with the freezing-point of water at 0° and the boiling-point at 100°. Réaumur's scale takes the freezing-point at 0° and the boiling-point at 80°. The Fahrenheit scale has the freezing-point at 32° and the boiling-point at 212°. To convert the degrees of any one of them into degrees of one or both of the other scales, it must be borne in mind that the zero of the two scales—Centigrade and Réaumur—corresponds with the freezing-point of water, or 32° on the Fahrenheit scale. The boiling-point of water being respectively 100° on the Centigrade scale, 80° on that of Réaumur, and 212° on that of Fahrenheit, it will be seen that the degrees intervening between the two standard points of the scale amount to 100 on the Centigrade scale, 80 on that of Réaumur, and 180 on that of Fahrenheit. This establishes the following ratio of comparison of the three thermometers:

180 : 100 : 80 :: 9 : 5 : 4.

When the Fahrenheit scale is in question, 32° must be added or subtracted, as is clearly shown in the accompanying table.

The following condensed rules will aid in making an accurate conversion of the three scales, Fahrenheit, Centigrade, and Réaumur:

RULES FOR CONVERSION OF THERMOMETRIC SCALES.

C. = Centigrade. F. = Fahrenheit.
D. = Degree cited. R. = Réaumur.

	If above freezing-point of water (32° F., 0° C., 0° R).	If below freezing-point, and above zero F. (—17.77° C., —14.22° R.).	If below zero F. (—17.77° C., —14.22° R.
C. into F.	D× 9÷5+32	32—(D ×9÷5)	—(D×9÷5)—32
R. " F.	D× 9÷4+32	32—(D ×9÷4)	—(D×9÷4)—32
F. " C.	D—32×5÷ 9	—(32— D)×5÷9	—(D+32)×5÷9
F. " R.	D—32×4÷ 9	—(32— D)×4÷9	—(D+32)×4÷9

C. into R. (all temperatures) D×4÷5.
R. " C. " " D×5÷4.

The following table gives a comparative view of the two scales generally in use, the Centigrade and the Fahrenheit, which will be found useful for immediate reference (*Stillé and Maisch*):

TABLE FOR COMPARING DEGREES OF THE CENTIGRADE AND FAHRENHEIT THERMOMETERS.

CENT.	FAHR.	CENT.	FAHR.	CENT.	FAHR.	CENT.	FAHR.	CENT.	FAHR.
—40°	—40.0°	+21°	+ 69.8°	+ 81°	+177.8°	+141°	+285.8°	+201°	+ 393.8°
39	38.2	22	71.6	82	179.6	142	287.6	202	395.6

19	66.2	80	176.0	140	284.0	200	392.0	800	1472.0
20	68.0								

Réaumur's scale is rarely employed, and its comparative degrees are not therefore inserted here. The conversion from Réaumur degrees to the degrees of the other scales can easily be made by the rules already mentioned. See *Heat*.

The *Clinical Thermometer* is one used by medical men to test the temperature of the body in cases of disease, as fever; covering only a certain number of degrees above or below the normal temperature. Normal and abnormal temperatures may be thus classified (Finlayson):

Below	35° Cent. = 95° Fahr.	Very low or collapse temperatures.
	36 " = 96.8 "	
About	36½ " = 97.7 "	Subnormal temperatures.
Normal	**37 " = 98.6 "**	**Normal temperature.**
About	37½ " = 99.5 "	Slightly above normal, or subfebrile temperatures.
	38 " = 100.4 "	
	38½ " = 101.3 "	
About	39 " = 102.2 "	Moderately febrile temperatures.
	39½ " = 103.1 "	
About	40 " = 104 "	Highly febrile temperatures.
	40½ " = 104.9 "	
Above	41 " = 105.8 "	Hyperpyretic temperatures.

The clinical thermometer is usually applied under the tongue and retained in that position for several minutes by the patient. For comparison, the same hour each day should be chosen.

Thermometry, thur-mom'e-tre. Application of the thermometer in diseases.

Thermoneurosis, thur-mo-nu-ro'sis (*therme, neuron*, nerve, *osis*). Elevation of temperature due to vasomotor condition, and not due to fever.

Thermonosus, thur-mon'o-sus (*therme, nosos*, disease). Disease produced by heat.

Thermopodium, thur-mo-po'de-um (*therme, pous*, foot). Hot pediluvium.

Thermoscope, thur'mo-scope (*therme, skopeo*, to examine). Instrument for determining differences in temperature.

Thermostat, thur'mo-stat (*therme, histemi,* to cause to stand). Automatic apparatus for maintaining constant temperature, based upon expansion of gases and solids upon the elevation of temperature.

Thermosystaltic, thur-mo-sis-tal'tik (*therme, sustaltikos,* adapted for contracting). Term applied to a muscle which is influenced in its contraction by heat and cold. *Athermosystaltic* means one not so influenced.

Thermoterion, thur-mo-ta're-on (*therme, tereo,* to preserve). An apparatus for keeping food warm in the nursery, sick-chamber, or when travelling.

Thermotherapeia, thur-mo-ther-ap-e'ah (*therme, therapeia,* treatment of disease). Treatment by means of heat, and especially of hot air.

Thermotoxic, thur-mo-toks'ik (*therme, tasso,* to arrange). Regulating heat-production or dissipation.

Thermum emphytum, thur'mum em'fit-um (*therme, emphutos,* innate). Animal heat.

Theromorphia, ther-o-mor'fe-ah (*ther,* beast, *morphe,* form). Anomalous arrangement of structure of parts of the human body similar to that normally present in lower animals.

The'sis (*thesis,* a proposition). *Inaugural dissertation.* A position or proposition. The name usually given to the essay composed by a candidate for graduation in medicine. In many universities, of Germany especially, the disputatio inauguralis is the public dissertation, while the theses are questions put to the candidate and answered in writing in the Latin language.

Thevetia (thev-a'te-ah) **ahouäi** (after Andrew Thevet, a French monk, who travelled in Brazil in the sixteenth century). *Ahouai.* The kernels of the nut of this Brazilian tree are said to be a violent poison. In the Antilles its nuts are called noix de serpent, and are used against the bites of serpents. **T. nerifo'lia,** *Yellow oleander, Exile tree;* common tree in the gardens of Southern India; has acrid properties, and has been given in tincture prepared from the bark as an antiperiodic in intermittent fever. **T. yccot'li,** native tree of Mexico, having poisonous seeds, and used as an ointment for piles.

Thevetin, thev-e'tin. White crystalline or powdery glucoside, having poisonous properties, and obtained from Thevetia yccotli.

Thi (abbreviation of **Thion,** sulphur). Prefix of sulphur compounds.

Thialdehyde, the-al'de-hyde. Sulphaldehyde.

Thibet (tib-bet') **musk.** Special variety of musk imported from Thibet.

Thicklist'ed. Pursy.

Thieves' vin'egar. Acetum aromaticum.

Thigh, thi. *Femur, Femen.* Of old, femur meant the thigh generally, and especially the outer part; femen, the inner part. It is now defined as the part of the lower limb which extends from the pelvis to the leg. **T., neck of the,** long, narrow, and oblique portion of the thigh-bone separating the head from the two trochanters.

Thigh-bone. Femur.

Thil'anin. Combination of sulphur (3 per cent.) and lanolin, applied externally in eczema, herpes, and sycosis.

Thim'bleberry. Fruit of Rubus occidentalis.

Thim'bleweed. Rudbeckia laciniata.

Thiol, the'ol. Product of treatment of brown-colored paraffin or gas oils at high temperature with sulphur. There are two thiols—a thin watery extract, liquid thiol, and one evaporated to dryness, dry thiol. Employed in the treatment of skin diseases, acute and chronic scrofulous ulcers, endometritis, etc. It is applied in powder, collodion, solution in water or glycerin, ointment, plaster, etc.; internally in pills or chocolate.

Thion, the'on (*theion*). Sulphur.

Thionic, the-on'ik. Relating to sulphur.

Thio-oxydiphenylamine, the'o-oks-e-de-fen-il'am-een. Sulphaminol.

Thiophen, the'o-fen. C_4H_4S. Colorless oily liquid derived from coal-tar benzene; not important therapeutically; its derivatives, sodium thiophen sulphonate and thiophen di-iodide, are used instead; the former is a white powder containing 33 per cent. of sulphur; the latter contains 9.5 per cent. The sodium salt has been used in prurigo; the di-iodide as a substitute for iodoform in cancer or inflammation of the breast, caries, and phlegmonous inflammations.

Thioresorcin, the-o-res-or'sin. $C_6H_4(OS)_2$. Gray powder, allied in composition to resorcin and replacing it. Used as substitute for iodoform in ulcers of the leg.

Thiosin'amin. *Allylsulphocarbamid.* Made by heating together allylmustard oil, absolute alcohol, and solution of ammonia. Used hypodermically in lupus.

Thioxydiphenylamine, the-ox-e-de-fen-il'am-een. Sulphaminol.

Thirst. A desire for, or absolute want of, liquids. It is owing to the wants of the system, a supply of fluid being required to compensate for the numerous losses that are constantly taking place. **T., exces'sive,** polydipsia. **T., mor'bid,** excessive desire for drinking.

Thirst'y. Affected with thirst.

This'tle, bless'ed. Centaurea benedicta. **T., cot'ton,** Onopordium acanthium. **T., globe,** echinops. **T., ho'ly,** Centaurea benedicta. **T., la'dies',** Carduus marianus. **T., milk, com'mon,** Carduus marianus. **T., pine,** Atractylus gummifera. **T., sow,** Sonchus oleraceus. **T., star,** Centaurea calcitrapa. **T., yel'low,** Argemone Mexicana.

Thladias, thlad'e-as (*thlao,* to crush). Eunuch.

Thlap'sis depres'sio (*thlao,* to break). Depression; melancholy.

Thlasias, thlas'e-as (*thlasias*). Eunuch.

Thlasis, thlas'is (*thlasis*). Contusion. **T. depres'sio,** depression.

Thlasma, thlas'ma (*thlasma*). Contusion. **T. concus'sio,** concussion. **T. strem'ma,** sprain.

Thlaspi, thlas'pe (*thlaspis*). *Pennycress.* Ord. Cruciferæ. Two species of thlaspi are directed in some pharmacopœias for medical use: Thlaspi arvense, or treacle mustard, and Thlaspi campestre or hirsutum or vulgatius, mithridate mustard. The pharmaceutical properties of both kinds resemble those of common mustard. **T. bur'sa** or **bursa'tum,** *Bursa pastoris, Shepherd's purse, Cocowort, St. James's wort, Poor man's parmacity;* a common European plant introduced into this country; slightly astringent. **T. nastur'tium,** Lepidium sativum. **T. sati'vum,** Lepidium sativum.

Thlibias, thlib'e-as (*thlibo,* to crush). Eunuch.

Thlipsencephalia, thlips-en-sef-al'e-ah. See *Dorencephalia.*

Thlipsencephalus, thlips-en-sef'al-us (*thlipsis,* compression, *enkephalos,* the encephalon). A monster in whom the skull is open, not merely in the frontal and parietal, but also in the occipital region, a distinct fontanelle not existing; supposed to be due to compression of fœtal head. There is lesion also of the upper part of the vertebral column.

Thlip'sis (*thlipsis*). Compression, and especially constriction, of vessels by an external cause. Oppression.

Thnescologia, thnes-co-lo'je-ah (*thnesco,* to die, *logos,* discourse). Thanatology.

Tho'lus (*tholos,* vaulted chamber). Achicolum. **T. diocle'us,** bandage for the head.

Thom'sen's disease'. *Myotonia congenita.* Family disease, commonly congenital, wherein the muscles become rigidly contracted when first used after an interval of rest. It is more common in Germany and Scandinavia than in this country. It is said to have affected the family of Dr. Thomsen, who first described it, for five generations. The voluntary muscular fibres become greatly hypertrophied.

Thomso'nian. One who practises or believes in Thomsonianism.

Thomso'nianism. *Thomsonism.* A fanciful doctrine, of which a person of the name of Thomson, of New England, was the founder. One of its leading

principles is that the human body is composed of four elements—earth, air, fire, and water; and one of its apothegms, that metals and minerals are in the earth, and, being extracted from the depths of the earth, have a tendency to carry all down into the earth who use them; that the tendency of all vegetables is to spring up from the earth, and therefore to uphold mankind from the grave. The Thomsonians are *botanical doctors*. See *Herb doctor*.

Thoracentesis, tho-rah-sen-ta'sis. Thoracocentesis.

Thoracic, tho-rah'sik. That which relates or belongs to the thorax or chest. **T. a'orta**, see *Aorta*. **T. ar'tery.** The *Acromial thoracic* is a short trunk arising from the fore part of the axillary artery. The *Alar thoracic* is a small branch which supplies the glands and areolar tissue of the axillary. The *Inferior thoracic artery* arises from the axillary, and descends vertically over the latter part of the thorax and the serratus major anticus. It becomes subcutaneous, and divides into several branches which embrace the breast. The *Superior thoracic artery* arises from the axillary artery or from the acromial, and descends forward between the pectoralis major and pectoralis minor, to which it distributes itself by a great number of branches. **T. ax'is**, common trunk of superior thoracic and acromiothoracic arteries. **T. cage**, bony and ligamentous thorax. **T. cav'ity**, space bounded by the ribs, vertebral column, and diaphragm. **T. duct**, *Duct of Pecquet, Alimentary duct;* the duct in which the lymphatics of the lower limbs, abdomen, left superior extremity, left side of the head, neck, and thorax terminate. It begins at the receptaculum chyli, which is formed by the union of five or six large lymphatic trunks, themselves formed from the union of all the absorbent plexuses of the abdomen. It ascends into the chest through the pillars of the diaphragm and by the side of the aorta and vena azygos. It opens at the posterior part of the subclavian vein of the same side. **T. gan'glia**, ganglia of sympathetic system situate in cavity of thorax. **T. glands**, set of lymphatic glands situate on the external thoracic wall. **T. limbs** are the upper limbs, so called because they are articulated with the lateral and upper parts of the chest. **T. nerves**, the short or anterior thoracic nerves are two in number; they arise from the brachial plexus and divide into an anterior and a posterior branch. The long thoracic nerve, posterior thoracic, external respiratory of Sir Charles Bell, is a long branch which arises from the fourth and fifth cervical nerves, immediately after their escape from the intervertebral foramina, and passes downward to be distributed upon the serratus magnus muscle. **T. ra'tio**, that existing between the anteroposterior and lateral diameters of the thorax. **T. re'gions** are the different regions of the chest; thus, we say anterior, lateral, and superior thoracic, etc. **T. veins**, branches emptying into the axillary veins. **T. ver'tebræ**, vertebræ, dorsal.

Thoracica, thor-as'ik-ah (*thorax*). Pectoralis.

Thorac'ico-abdom'inal re'gion. That part of the thorax occupied by the arch of the diaphragm and its contents.

Thorac'ics, first of the. Superior external mammary artery.

Thoraco, tho'rak-o. In composition, the thorax or chest.

Thoracocentesis, tho-ra-ko-sen-ta'sis (*thoraco, kentesis*, puncture). Perforation of the chest to evacuate contained fluid, as in empyema.

Thoracocyllosis, tho-rak-o-sil-lo'sis (*thoraco, kullosis*, a crippling). Deformity of the thorax.

Thoracocyrtosis, tho-rak-o-sur-to'sis (*thoraco, kurtos*, curved). Abnormal curvature of thorax.

Thoracocystis, tho-rak-o-sis'tis. Thoracystis.

Thoracodidymus, tho-rak-o-did'im-us (*thoraco, didumos*, a twin). Monstrosity in which twins are united by the thorax.

Thoracodyne, tho-rak-od'in-a (*thoraco, odune*, pain). Pleurodynia. Pain in the chest.

Thoracodynia, tho-rak-o-din'e-ah. Pleurodynia. Pain in the chest.

Thoracogastrodidymus, tho-rak-o-gas-tro-did'im-us (*thoraco, gaster*, the belly, *didumos*, a twin). A monstrosity in which twins are united by the chest and abdomen.

Thoracogastroschisis, tho-rak-o-gas-tros'kis-is (*thoraco, gaster*, a stomach, *schizo*, to divide). Congenital cleft of the abdominal wall involving the thorax also.

Thoracom'eter (*thoraco, metron*, measure). Stethometer.

Thoracomonodidyme, tho-rak-o-mo-no-did'im-e (*thoraco, monos*, single, *didumos*, a twin). Thoracodidymus.

Thoracomyodyn'ia (*thoraco, myodynia*). Pleurodynia.

Thoracopagus, tho-rak-op'ag-us (*thoraco, pegnumi*, to fasten together). Double monster united at the thorax. **T. tribrach'ius**, one having two of the upper limbs fused. **T. tri'pus**, one having two of the lower limbs fused.

Thoracopathia, tho-rak-o-path-e'ah (*thoraco, pathos*, disease). Disease or suffering in the chest.

Thoracoplasty, tho'rak-o-plas-te (*thoraco, plasso*, to mould). Plastic operation upon the thorax.

Thoracoschisis, tho-rak-os'kis-is (*thoraco, schizo*, to split). Fissure of the thorax.

Thoracoscopium, tho-rak-o-skop'e-um. Stethoscope.

Thoracoscopy, tho-rak-os'ko-pe (*thoraco, skopeo*, to inspect). See *Auscultation*.

Thoracostenosis, tho-rak-o-sten-o'sis (*thoraco, stenoso*, to confine). Contraction of the thorax.

Thoracotomy, tho-rak-ot'o-me (*thoraco, tome*, incision). Incision into, or operation on, the thorax. Thoracocentesis.

Thoracotromus, tho-rak-ot'ro-mus (*thoraco, tromos*, a trembling). Tremor of the chest.

Thoracystis, tho-rah-sis'tis (*thorax, kustis*, a bladder). Encysted dropsy of the chest. Hydatids in the chest.

Thoradel'phus (*thorax, adelphos*, brother). Double monstrosity with one head and the trunks united above the umbilicus. There are four lower extremities and two upper.

Tho'rax (*thorax*, a cuirass, a coat of mail). The breast, the chest; one of the splanchnic cavities, bounded posteriorly by the vertebræ, laterally by the ribs and scapula, anteriorly by the sternum, above by the clavicle, and below by the diaphragm; destined to lodge and protect the chief organs of respiration and circulation, the lungs and the heart. Corset. The following estimates have been made as to measurements, etc. of the thorax (Vierordt):

DIMENSIONS AND WEIGHT OF THORAX (cm.) (Krause).

Sternum: Height (length) . . .	18–20 (man), 16–17 (woman).		
	Length.	Breadth.	Thickness.
Manubrium . . .	4.6	up to 6	1.5
Body	11 (man), 9 (woman).	varies.	0.8
Xiphoid process .	varies.	"	0.2

Ribs: Weight (Dursy) (the cartilages are included):
14 true ribs . . . . . 472 g.
10 false ribs . . . . . 202 g.
The seventh rib is the heaviest, weighing 52 g. (of which the cartilage weighs 23); the twelfth rib is the lightest, weighing 4 g.

Anterior wall (after moderate expiration) . .	16–19 (Krause).
Posterior wall	27–30
Lateral wall	32

(*a*) *Internal Dimensions.*

Between incisura sternalis of sternum and first thoracic vertebra	5– 6
Between the middle of the sternum and sixth thoracic vertebra	12–15
Between xiphoid process and twelfth thoracic vertebra	15–19
Between cartilage of the fourth and angle of the seventh rib	16–20
Transverse diameter between first pair of ribs	9–11
" " " sixth " "	20–23
" " " twelfth " "	18–20
Horizontal circumference in the middle of the height .	65–76

(*b*) *Circumference of Chest.*

Circumference on expiration (cm.):
Middle average: 82 (Fröhlich), the arms in vertical position, below the nipples and close to angle of scapula.
Middle average: 82 (Krug).
" " 81.8 (Fetzer) above nipples and angle of scapula, arms in vertical position.
Middle average: 76–85. Extreme, 70–95.
Average: 82; 76 for women.
The lower circumference of expiration (height of xiphoid process and sixth rib) amounts to 76; in women to 70.
Circumference on inspiration:
Average: 90 (Fröhlich).
" 90.7 (Krug).
" 89 (Fetzer).
Middle average: 86–95. Extreme, 76–100.
In right-handed individuals the periphery of the right side exceeds the left side in size 1–2 cm.; in left-handed individuals the left side equals the right in size, or is only a little larger.
Breadth of thorax (costal or transverse diameter):

Men	25–26
Women	23–24
Above (*i. e.* the highest point in the axilla)	25.8
In the middle (height of nipples)	26.1
Below (xiphoid process and cartilages of sixth rib)	25.8

Thore, tho'ra (*thore*). Sperm.

Thorn'apple. Datura stramonium. **T., red,** Datura sanguinea.

Thorn-head'ed worms. See *Acanthacephala.*

Thorn'wald's disease. Inflammation of Luschka's gland.

Thor'oughstem. Eupatorium perfoliatum.

Thor'oughwax. Eupatorium perfoliatum.

Thor'oughwort. Eupatorium perfoliatum.

Thor'owwax. Bupleurum rotundifolium.

Thor'ulus stramin'eus (a straw pad). A splint of straw, corded and having a central stick for a splint; used for fractures of thigh or leg.

Thorus, tho'rus (*thoros*). Semen.

Thought-read'ing. Muscle-reading; not direct thought-reading, except by appreciation of involuntary muscular movements of the subject.

Thought-transfer'ence. See *Thought-reading* and *Hypnotism.*

Thræ'nine (Ger. *thräne*, a tear). See *Tears.*

Thread'worm. Dracunculus. **T., long,** trichocephalus.

Three-leaved night'shade. Trillium.

Threpsis, threp'sis (*trepho*, to nourish). Assimilation; nutrition.

Threpsology, threp-sol'o-je (*threpsis, logos*, a description). The doctrine of, or treatise on, the nutrition of organized bodies.

Thresh'old. Term used in psychophysics to imply the limitation of perception of stimulus or of difference between two stimuli of different intensities.

Thrid'ace (*thridax*). Lactucarium. Thridacium is obtained by expression from Lactuca sativa.

Thridacine, thrid-as-e'na (*thridakine*). Lactuca.

Thridacium, thrid-as'e-um (*thridax*). See *Thridace.*

Thri'dax. Lactuca.

Thrift, Amer'ican. Statice Caroliniana. **T., lav'ender,** Statice limonium. **T., seaside,** Statice Caroliniana.

Thrill. Fremitus; also feeling of vibration felt over an aneurism and over the heart and great vessels in certain diseases of the heart, etc.

Thrix (*thrix*). Hair.

Throat. The anterior part of the neck; also the fauces and pharynx.

Throat'root. Geum Virginianum; liatris.

Throat'wort. Campanula trachelium.

Throb. Pulsation or beat.

Throb'bing. *Pulsatory, Pulsating.* A throbbing pain is a kind of pain which is, or seems to be, caused or augmented by the pulsation of arteries.

Throe. Agony; labor-pains.

Thromballosis, throm-bal-lo'sis (*thrombos*, a clot, *alloioo*, to change). The change resulting from coagulation of blood in the veins. See *Thrombosis.*

Thrombi lactei, throm'be lak'ta-e. Accumulation of milk in the mammary gland; obstruction caused in this way.

Thrombo-arteritis, throm'bo-ar-ter-e'tis (*thrombus, arteria*, artery). Thrombus producing arteritis.

Thrombocystis, throm-bo-sis'tis (*thrombus, kustis*, a cyst). The cyst occasionally surrounding a clot of blood, as in encephalic hemorrhage.

Thromboid, throm'boid (*thrombus*). Resembling a thrombus.

Thrombolymphangitis, throm-bo-limf-an-je'tis (*thrombus, lymphangitis*). Inflammation of lymphatic vessels from obstruction.

Thrombophlebitis, throm-bo-fleb-e'tis (*thrombus, phlebitis*). Inflammation of a vein with formation of thrombus, or from softening of a thrombus by an abscess.

Throm'bos. A clot. See *Thrombus.*

Thrombosis, throm-bo'sis (*thrombus, osis*). Coagulation; applied especially to coagulation of blood in a blood-vessel. The partial or complete obstruction of any portion of the circulatory apparatus by a morbid product developed *in situ.* The coagulum may be carried onward (see *Embolism*), or go on to suppuration. **T., maran'tic,** thrombosis of the cerebral sinuses coincident with marasmus or generally defective nutrition.

Thrombus, throm'bus (*thrombos*, a clot). A coagulum formed during life in any portion of the vascular system where there is obstruction to the circulating blood. Formerly a small, hard, round, bluish tumor, *Hæmatoma*, formed by effusion of blood in the vicinity of a vein opened in the operation of bloodletting. See *Blood.* **T. neonato'rum,** cephalæmatoma. **T., pel'vic,** pelvic hæmatocele. **T. of vul'va and vagi'na,** pudendal hæmatocele.

Throttle, throt'tel (dim. of **Throat**). Trachea; also to press powerfully or continuously with the fingers on the throat, so as to endanger or produce apnœa and death; to strangle.

Throw. Agony; labor pains.

Thro'wort. Leonurus cardiaca.

Thrush. Aphthæ of infants. **T. fun'gus,** see *Aphthæ.* **T., milk,** aphthæ. **T., white,** aphthæ.

Thrypsis, thrip'sis (*thrupto*, to break in pieces). Comminution.

Thrypticus, thrip'tik-us (*thrupto*, to break in pieces). Lithontriptic.

Thu'ja. Thuya. **T. occidenta'lis,** Thuya occidentalis.

Thujetic (thu-je'tic) **acid.** Derivative of thujin formed by heating with barium hydrate.

Thujetin, thu'je-tin. Derivative of thujin.

Thujigenin, thu-jij'en-in. Derivative of thujin, formed from alcoholic solution of thujin by heating with dilute hydrochloric or sulphuric acid.

Thujin, thu'jin. Crystallizable, citron-yellow coloring principle obtained from Thuja occidentalis.

Thumb. The first finger (counting the fingers as five); or, similarly, the first toe. See *Pollex.*

Thu'rea (*thus*). Juniperus lycia. **T. vir'ga,** Juniperus lycia.

Thus (*thuo*, to burn perfumes). See *Pinus abies.* **T. America'num,** see *Pinus sylvestris.* **T. fœmine'um,** see *Pinus abies.* **T. Judæo'rum,** Croton cascarilla; styrax; thymiama. **T. libano'tos,** Juniperus lycia. **T. mas'culum,** Juniperus lycia. **T. vulga're,** see *Pinus abies.*

Thu'ya (*thuos*, incense). See *T. aphylla, T. obtusa,* and *T. occidentalis.* Also the arrangement of the medullary matter of the cerebellum, termed arbor vitæ. **T. aphyl'la,** see *Sandarac.* **T. obtu'sa,** T. occidentalis. **T.** or **Thu'ja occidenta'lis,** *American arbor vitæ, Tree of life;* ord. Coniferæ; the leaves and wood were formerly in high repute as resolvents, sudorifics, and expectorants; given in phthisical affections, intermittent fevers, and dropsies. Thuja (Ph. U. S.) is the fresh tops of T. occidentalis. The expressed juice has been applied to condylomata.

Thylaci'tis (*thulakos*, a small sac, *itis*). Gutta rosea.

Thy'ma. Ecthyma; thymion.

Thymacetine, thime-as'et-een. White powder, derivative of thymol, closely allied to phenacetin; analgesic and hypnotic in doses of 5 to 10 grains.

Thymasthma, thim-asth'mah. Asthma thymicum.

Thymbra, thim'brah (*thumbra*). Satureia hortensis. **T. hispan'ica,** Thymus mastichina.

Thyme. Thymus. **T., cat,** Teucrium marum. **T., com'mon,** thymus. **T., gar'den,** thymus. **T., lem'on,** see *Thymus serpyllum.* **T., moth'er of,** Thymus serpyllum. **T., oil of,** see *Thymus.* **T., Virgin'ia,** Pycnanthemum linifolium. **T., wild,** Thymus serpyllum.

Thymelæa, thim-el-e'ah (*thumos,* thyme, *elaia,* the olive tree). Daphne gnidium. **T. laure'ola,** Daphne laureola. **T. meze'reum,** Daphne mezereum. **T. Monspeli'aca,** Daphne gnidium.

Thymelcosis, thim-el-ko'sis (*thymus, helkos,* an ulcer). Ulceration of the thymus gland.

Thymene, thy'meen. Hydrocarbon associated with cymene and thymol in thyme.

Thymiama, thim-e-am'ah (*thuo,* to burn perfumes). A perfume. *Muskwood.* Bark from Syria, Cilicia, etc., supposed to be the product of the liquid storax tree. It has an agreeable balsamic smell, approaching that of liquid storax. See *Lacaphthon* and *Narcaphthon;* also *Fumigation* and *Suffimentum.*

Thymiasiotechnia, thim-e-as-e-o-tek'ne-ah (*thymiasis,* fumigation, *techne,* art). Thymiatechny.

Thymiasis, thim-e'as-is (*thumiasis*). Fumigation.

Thymiatechny, thim-e-a-tek'ne (*thumiama,* a perfume, *techne,* art). The art of employing perfumes in medicine.

Thymic, thy'mic. Having relation to the thymus, as thymic asthma, which may be a form of reflex spasm or due to enlargement of the thymus gland. Relating to thyme (pron. ty'mic). **T. ac'id,** thymol.

Thymion, thim'e-on (*thumion, thumos,* thyme). A small wart on the skin resembling a bud of thyme.

Thymiosis, thim-e-o'sis (*thymion*). Frambœsia. **T. In'dica,** frambœsia.

Thymites, thim-e'tees (*thumites*). Wine impregnated with thyme.

Thymitis, thim-e'tis (*thumos,* thymus, *itis*). Inflammation of the thymus gland.

Thymol, ti'mol. $C_{10}H_{13}HO$. Thymic acid; thyme camphor. Stearopten from volatile oils of Thymus vulgaris, Monarda punctata, and Carum Ajowan, obtained as a solid by refrigeration of the oil, or in the liquid form by treating the essence of thyme, in which it is associated with a hydrocarbon, thymene, with an aqueous solution of an alkali, as soda or potash, and acting on the separated soap with acid, as hydrochloric acid. It is also obtained from other volatile oils. It is antiseptic and a local anæsthetic. Used internally in typhoid fever, rheumatism, fermentation of the stomach and bowels, whooping cough, etc.; externally applied to carious teeth and as an ingredient in liniments; to wounds in proportion of 1 part to 1000, and to skin diseases; used also for preservation of anatomical specimens, etc. It is also employed in gauze, by inhalation, by spraying, and in ointment.

Thymopathia, thim-o-path-e'ah (*thumos,* the mind, *pathos,* affection). A disease of the mind. Mental disorder.

Thymos, the'mos (*thumos*). Rage; thymus.

Thymoxalme, thim-oks'al-me (*thumos,* thyme, *oxus,* acid, *hals,* salt). Compound of thyme, vinegar, and salt.

Thymum, the'mum. Thymus.

Thymus, thy'mus (*thumos*). *Sweetbread.* An organ, concerned in hæmatosis, seated in the upper separation of the anterior mediastinum. It has the appearance of a glandular body; oblong, bilobate, soft, and very variable in size and color. In the fœtus it is very large, and contains in a central cavity—reservoir of the thymus—a milky fluid. It gradually disappears, and in old age is scarcely discernible. The arteries called thymic are from the inferior thyroid, internal mammary, bronchial, and mediastinal. The veins have the same arrangement. It receives some nervous filaments from the pneumogastric nerves, the phrenic, and the inferior cervical ganglia.

The following measurements have recently been made of this organ:

Weight, 18.5 gm. (E. Bischoff). Volume, 4–23 cm.	
Length	54–83 (Krause).
from birth to 9th month	59.1 (Friedleben).
from 9th month to 2d year	69.6
from 3d to 14th year	84.4
Middle breadth	27–41
above and below	7–9

In the 25th to 35th year the thymus usually disappears; exceptionally it remains till old age.

Thy'mus. *Thyme* (pron. time). Ord. Labiatæ. This has an agreeable, aromatic smell, and a warm, pungent taste, and is reputed to be resolvent, emmenagogue, tonic, and stomachic. The properties of thyme are due to two hydrocarbons, thymene and cymene, associated with a stearoptene called thymol or oil of thyme, which is officinal. See *Thymol.* Psyche; Satureia capitata; thymion. **T. calamin'thus,** Melissa calamintha. **T. capita'tus,** Satureia capitata. **T. cilia'tus,** T. mastichina. **T. citriodo'rus,** lemon thyme. **T. Cret'icus,** Satureia crepitata. **T. horten'sis,** thymus. **T. inclu'dens,** T. serpyllum. **T. mastichi'na,** low, shrubby, Spanish plant, used as an errhine. **T. multiflo'rus,** Melissa nepeta. **T. nepeta,** Melissa nepeta. **T., res'ervoir of the,** see *Thymus.* **T. serpyl'lum,** *Mother of thyme, Wild thyme;* has the same properties as the garden thyme. *Lemon thyme, Serpyllum citratum,* is a variety of it. It is very pungent, and has a particularly grateful odor, approaching that of lemons. **T. sylvat'icus,** Clinopodium vulgare. **T. sylves'tris,** Satureia capitata. **T. tenuifo'lius,** thymus. **T. vulga'ris,** thymus.

Thyremphraxis, thir-em-frax'is (*thyreo, enphraxis,* obstruction). Bronchocele.

Thyreo, thy'ra-o (*thureos,* a shield). *Thyro.* In composition, the thyroid cartilage or gland.

Thyreo-adenitis, thy'ra-o-ad-en-e'tis. Thyreoitis.

Thyreo-ary-epiglotticus, thir'a-o-ar-e-ep-e-glot'tikus. United thyro-epiglottic and aryteno-epiglottic muscles.

Thyreo-aryteno-epiglottideus, thir'a-o-ar-it-e'no-ep-e-glot-tid-a'us. Thyro-ary-epiglotticus.

Thyreo-arytenoid, thy're-o-ar-it'en-oid. That which relates to the thyroid and arytenoid cartilages. **T. lig'aments,** inferior ligaments of the larynx; lips of the glottis; vocal cords or ligaments. Two ligaments, about two lines broad, formed of elastic and parallel fibres, which are contained in a duplicature of the mucous membrane of the larynx. They extend horizontally from the anterior projection at the base of each arytenoid cartilage to the middle of the angle of union of the thyroid cartilage. They are the essential organs of voice. See *Glottis.* **T. mus'cles, Thyreo-arytenoï'dei,** are thin muscles which arise from the middle and inferior part of the posterior surface of the thyroid cartilage, whence they proceed backward and outward, to be inserted into the outer part of the base of the arytenoid cartilage. They give the necessary tension to the ligaments of the glottis in the production of the voice. The name *Thyreo-arytenoïdeus obliquus* is applied to a portion of the arytenoïdeus muscle.

Thyreocele, thir-e-o-se'le (Eng. thi're-o-seel) (*thyreo, kele,* a tumor). Tumor of the thyroid gland. Bronchocele.

Thyreocorniculatus, thir-a-o-kor-nik-u-lat'us. Upper portion of inferior thyreo-arytenoid muscle, running from upper anterior portion of thyroid cartilage to arytenoid cartilage.

Thyreocuneiformis, thir-a-o-ku-na-e-for'mis. Portion of inferior thyreo-arytenoid cartilage inserted on the cuneiform cartilages.

Thyreo-epiglottic, thy're-o-ep-e-glot'tik. Relating to the thyroid cartilage and epiglottis. **T. lig'ament,** band running from anterior thyroid notch to base of epiglottis. **T. muscle,** portion of thyreo-arytenoid extending to epiglottis.

Thyreo-epiglotticus (thir'a-o-ep-e-glot'tik-us) **lon'gus.** Muscular slip at times passing from lower horn of thyroid cartilage to epiglottis.

Thyreo-epiglottideus (thir'a-o-ep-e-glot-tid-a'us) **ma'jor.** Thyro-epiglottic muscle. **T. mi'nor** or **supe'rior,** muscular fibres at times seen arising from the thyroid cartilage, running along the thyreo-epiglottic ligament, inserted into the epiglottis.

Thyreoglossus lateralis, thir-a-o-glos'sus lat-er-al'is. Muscle at times arising from junction of thyreohyoid and hyoglossus.

Thyreohyoid, thy-re-o-hy'oid. *Thyreohyoïdeus, Thyrohyoid.* Belonging or relating to the thyroid cartilage and os hyoides. **T. mem'brane,** very broad, yellowish, fibrous membrane, thicker at the middle than at the extremities, attached above to the posterior surface of the body and great cornu of the os hyoides, and below to the whole superior edge of the thyroid cartilage. The lateral ligaments may be considered as the margins of the thyrohyoid membrane. They pass between the superior cornu of the thyroid cartilage to the extremities of the greater cornua of the os hyoides. A small cartilaginous or bony nodule—*cartilago triticea, corpusculum triticeum*—is sometimes found in each. **T. mid'dle lig'aments,** thickened middle portion of T. membrane. **T. mus'cle** is situate at the anterior and superior part of the neck, attached to the oblique line on the anterior surface of the thyroid cartilage, to the inferior edge of the body of the os hyoides, and to the anterior portion of its great cornu. **T. nerve,** branch of hypoglossal to thyreohyoid muscle.

Thyreohyoïdeus, thir-a-o-he-o-e'da-us. Thyreohyoid muscle. **T. accesso'rius,** muscular slip sometimes found running from superior cornu of thyroid cartilage to greater cornu of hyoid bone. **T. az'ygos,** accessory muscle running from greater cornu of hyoid bone to upper edge of thyroid cartilage. **T. mi'nor,** T. azygos. **T. supe'rior,** T. azygos. **T. supe'rior mi'nor,** fasciculus of thyrohyoid muscle, rarely seen to run from upper edge of thyroid cartilage to posterior portion of greater cornu of hyoid bone. **T. supe'rior mi'nor az'ygos,** separate fasciculus of thyreohyoideus. **T. su'perior mi'nor latera'lis,** bundles of thyrohyoideus running from tip of superior cornu of thyroid cartilage to end of greater cornu of hyoid bone.

Thy'reoid. Thyroid.

Thyreoï'deus. Thyroideal.

Thyreoiditis, thir-a-o-id-e'tis. Thyreoitis.

Thyreoitis, thir-a-o-e'tis (*thyreo, itis*). Inflammation of the thyroid gland.

Thyreomediastinalis, thir-a-o-med-e-as-tin-al'is. Muscular bundle running from external surface of pericardium to thyroid gland.

Thyreomembranosus, thir-a-o-mem-bran-o'sus. Portion of thyreo-arytenoideus inserted within plica thyreo-arytenoidea inferior.

Thyreöncus, thir-a-on'kus (*thyreo, onkos,* tumor). Tumor of the thyroid glands. Bronchocele.

Thyreo-œsophageus, thir-a-o-e-sof-aj-a'us. Muscular bundles running from œsophagus to thyroid cartilage.

Thyreopalatinus, thir-a-o-pal-at-e'nus. Part of palatopharyngeus inserted into thyroid gland.

Thyreopharyngeus, thir-a-o-fah-rin-ja'us. Thyropharyngeus.

Thyreopharyngopalatinus, thir-a-o-fah-rin-go-pal-at-e'nus. The chief muscular mass of the soft palate, consistlng of a thyreopalatine and a pharyngopalatine portion.

Thyreophraxia, thir-a-o-frax'e-ah (*thyreo, phrasso,* to obstruct). Bronchocele.

Thyreophyma, thir-a-o-fe'mah (*thyreo, phuma,* tumor). Enlargement of the thyroid gland. Bronchocele.

Thyreosyndesmicus, thir-a-o-sin-des'mik-us. Bundles of thyreohyoid muscle inserted on lateral thyreohyoid ligament.

Thyreotomy, thi-re-ot'o-me. Thyrotomy.

Thyrepiglot'icus. Thyreo-epiglottic.

Thy'rioid. Thyroid.

Thyrioidi'tis. Thyroiditis.

Thy'ro. In composition, see *Thyreo.*

Thyro-aryt'enoid. Thyreo-arytenoid.

Thyrocele, thir-o-se'le (Eng. thy'ro-seel) (*thyro, kele,* tumor). Bronchocele.

Thyrocricopharynge'us. See *Cricopharyngeal.*

Thyrohy'al. Applied to great cornu of hyoid bone.

Thyrohy'oid. Thyreohyoid.

Thyroid, thy'roid (*thura,* a gate or folding-door, or *thureos,* a shield, *eidos,* form). *Thyreoid, Thyrioid.* Having the shape of a folding-door. **T. ar'teries,** thyroideal arteries. **T. ar'tery of Neubauer,** see *Thyroideal arteries.* **T. ax'is,** a short, thick trunk, arising from the first portion of the subclavian artery, dividing almost immediately into the inferior thyroid, suprascapular, and transversalis colli. **T. bod'y,** thyroid gland. **T. car'tilage,** the largest of the cartilages of the larynx, at the anterior part of which it is situate. It is larger transversely than vertically, broader above than below, and seems formed by the junction of the two quadrilateral plates, which produce by their union an angle that projects forward. Its two posterior margins terminate above and on each side by an ensiform prolongation called the greater cornu of the thyroid cartilage, *Cornu superius* or *longum;* and below by a less prominent eminence, the lesser cornu, *Cornu inferius* or *breve,* which is articulated with the cricoid. **T. em'inence,** prominence produced by the thyroid in front of the neck. **T. fora'men,** obturator foramen. **T. gan'glion,** middle cervical ganglion. **T. gland** or **bod'y** covers the anterior and inferior part of the larynx, as well as the first rings of the trachea, and is composed of two lobes, flattened from before to behind, which are united by a transverse prolongation of the same nature as themselves, called the isthmus. At times there arises from the upper border of the isthmus, or the lateral lobes in the neighborhood of the isthmus, a third or middle lobe—pyramus, processus pyramidalis, columna media, appendix glandulæ thyreoïdeæ. This lobe is sometimes independent, and forms a number of roundish or longish lobes, when it has been called glandula thyreoïdea accessoria. The weight of the thyroid gland has been estimated at 30 grammes; volume, 25 to 30 c. m.; the isthmus, 18 broad and high, 9 thick; lateral lobes, 54–68 long; in the middle (breadth) 27–31, (thick) 14–18; the lobules, 0.5–1.

Thyroideal, thy-roid'e-al. That which concerns the thyroid gland or cartilage. **T. ar'teries,** these are two on each side: 1. The superior thyroideal, superior laryngeal, superior guttural, arises from the anterior part of the external carotid and proceeds to the upper part of the thyroid gland, after having given off a laryngeal branch and a cricothyroid. 2. The inferior thyroideal, inferior guttural, much larger than the last, arises from the upper part of the subclavian. It passes to the inferior part of the thyroid gland, to which it is distributed, after having given a number of branches to the neighboring parts, among which is the cervicalis ascendens. The inferior thyroideal artery is occasionally replaced by the thyroid artery of Neubauer or artery of Neubauer, which arises directly from the curvature of the aorta. **T. veins,** these are—1, a superior thyroideal and several middle thyroideal, which open into the internal jugular vein; 2, an inferior thyroideal, much larger than the preceding, whose branches form, by anastomosing with those of the opposite side in front of the trachea, a very remarkable venous plexus, called the infrathyroideal plexus.

Thyroidectomy, thy-roid-ek'to-me (*thyroid, ektome,* excision). Excision of the thyroid gland.

Thyroideus, thir-o-e'da-us. Thyroid. **T. pro'prius,** muscular bundle running from superior to inferior edge of thyroid cartilage. **T. transver'sus,** variety of cricothyroid muscle running between cricoid processes of thyroid cartilages. **T. transver'sus im'par,** latter muscle found on inside only.

Thyroiditis, thir-oid-e'tis (*thyroid, itis*). Inflammation of the thyroid gland.

Thyroidotomy, thy-roid-ot'o-me (*thyroid, tome,* incision). Incision of the thyroid gland.

Thyropalatinus, thir-o-pal-at-e'nus. Portion of palatopharyngeus inserted into the thyroid gland.

Thyropharyngeus, thir-o-fah-rin-ja'us. *Thyreopharyngeus.* Portion of the constrictor pharyngis inferior attached to the thyroid cartilage. See *Cricopharyngeal.*

Thyropharyngopalatinus (thir-o-fah-rin-go-pal-at-e'nus) or **Thyropharyngostaphylinus,** thir-o-fah-rin-go-staf-il-e'nus. Palatopharyngeus.

Thyrophraxia, thir-o-fraks'e-ah (*thyro, phrasso,* to obstruct). Bronchocele.

Thyrotomy, thy-rot'o-me (*thyro, tome,* section). Division of the thyroid cartilage, as for the removal of foreign bodies in the larynx, etc.

Thyrotrachealis (thir-o-trak-a-al'is) **profun'dus.** Abnormal insertion of portion of cricothyroid muscle on the trachea. **T. superficia'lis,** abnormal insertion of sternothyroid muscle on the trachea.

Thyrotriticeus, thir-o-trit-is'a-us. Abnormal insertion of bundles of fibres of thyrohyoid on lesser cornu of hyoid bone.

Thyrsus, thur'sus (*thursos,* stalk). Penis.

Thysselinum, this-sel-e'num. Peucedanum palustre. **T. palus'tre,** Peucedanum palustre.

Tiarel'la cordifo'lia. *Coolwort.* A tonic and diuretic.

Tibia, tib'e-ah (a flute or pipe). The largest bone of the leg; a long, irregular, and triangular bone situate on the inner side of the fibula. It has a superior or femoral extremity, large, rounded, and with two eminences at the sides called tuberosities of the tibia. The outermost is articulated with the fibula. On its head are two articular, oval, concave surfaces articulated with the condyles of the femur. The inferior or tarsal extremity has an articular surface beneath, which joins the astragalus; within, a triangular eminence which forms the malleolus internus; and on the outside a triangular surface which articulates with the fibula. The body or shaft of the tibia has three faces, separated by three angles, the anterior of which is the most prominent, and is called the spine or crista of the tibia—the shin. The tibia is articulated with the femur, fibula, and astragalus. **T. min'ima,** fibula.

Tibiad, tib'e-ad. See *Tibial aspect.*

Tibiæus, tib-e-e'us. Tibial. **T. anti'cus,** tibialis anticus. **T. posti'cus,** tibialis posticus.

Tibial, tib'e-al. That which relates to the tibia or to the leg. **T. aponeuro'sis,** this surrounds the muscles of the leg, continuous above with the femoral aponeurosis, and arises from the head of the fibula and from several fibrous expansions which detach themselves from the tendons of the triceps, sartorius, gracilis, and semitendinosus. It descends around the leg, attaching itself to the whole extent of the anterior and inner edges of the tibia. It sends below an expansion, which passes before the tendo Achillis, and is continuous with the anterior annular ligament of the tarsus. It is attached, also, to the sheath of the peroneal muscles. **T. ar'teries** are two in number: 1. *Anterior tibial artery,* which arises from the popliteal, before its bifurcation, passes immediately through the opening in the upper part of the interosseous ligament, and reaches the anterior part of the leg, when it turns downward and descends obliquely between the extensor communis digitorum pedis and the tibialis anticus, anterior to the interosseous ligament, glides under the anterior annular ligament of the tarsus, and takes the name *Dorsalis tarsi.* Among the numerous branches given off by the anterior tibial may be distinguished the recurrent tibial artery, internal and external malleolar artery. 2. *Posterior tibial artery,* which arises from the bifurcation of the popliteal artery, and descends between the two planes of the posterior muscles of the leg until it arrives under the arch of the calcaneum, where it divides into two branches—the plantar arteries. **T. as'pect,** an aspect toward the side on which the tibia is situated. *Tibiad* is used adverbially to signify toward the tibial aspect. **T. commu'nicating nerve,** external saphenous nerve. **T. nerves** are two in number: 1. The anterior tibial nerve. One of the two branches in which the external popliteal terminates. It accompanies the anterior tibial artery. 2. The posterior tibial nerve, which is also called the internal popliteal. **T. veins,** these are anterior and posterior, and have the same arrangement as the arteries which they accompany.

Tibiale, tib-e-al'a. Bone having its analogue in a portion of the astragalus.

Tibialis anticus, tib-e-al'is an-te'kus. A muscle situate at the anterior part of the leg. Above, it has the shape of a triangular prism; below, slender and tendinous. It is attached above to the anterior part of the external tuberosity of the tibia, to the superior half of the outer surface of that bone, and to the anterior surface of the interosseous ligament. Below, its tendon terminates at the base of the first cuneiform bone and at the posterior extremity of the first metatarsal bone. It bends the foot on the leg and directs its point inward at the same time that it raises its inner edge. It can also bend the leg on the foot and prevent it from falling backward in standing. **T. anti'cus accesso'rius,** tibiofascialis. **T. grac'ilis,** plantar muscle. **T. posti'cus,** situate at the posterior and deep part of the leg, thicker above than below, and attached above to the posterior surface of the fibula, to the posterior surface of the tibia, and to the interosseous ligament. It terminates below at the tuberosity on the inferior extremity of the os scaphoïdes. This muscle extends the foot on the leg, at the same time raising its inner edge. It likewise extends the leg on the foot. It was called *nauticus* by Spigelius, because sailors bring it chiefly into action in climbing the mast. **T. profun'dus,** tibiofascialis. **T. secun'dus,** tensor of capsule of ankle.

Tibiofascialis, tib-e-o-fas-se-al'is. Small muscle arising at times from lower third of anterior edge of tibia over tibialis anticus, inserted into annular ligament and deep fascia. Also called *Tibiofascialis anticus.*

Tibiofemoral (tib-e-o-fem'o-ral) **in'dex.** Ratio between lengths of tibia and femur.

Tibiofibular (tib-e-o-fib'u-lar) **articula'tions.** Those between the tibia and fibula. **T. lig'aments,** those assisting in formation of tibiofibular articulations.

Tibionavicular (tib-e-o-nav-ik'u-lar) **lig'ament.** Portion of deltoid ligament of ankle.

Tibioplantaris, tib-e-o-plan-tah'ris. Accessory slip of tibialis anticus, running from latter muscle to plantar fascia, and through the latter acting upon the great toe.

Tibiotarsal, tib-e-o-tar'sal. Relating to the tibia and tarsus. **T. articula'tion,** articulation of the foot with the leg; formed by the tibia and the astragalus, and strengthened by lateral, anterior, and posterior ligaments.

Tic. *Twitching, Vellication.* A local and habitual convulsive motion of certain muscles, and especially of some of those of the face. It is sometimes called spasmodic or convulsive tic, tic non-douloureux, hypercinesia of the facial nerve, histrionic or mimic spasm of the face, to distinguish it from *Tic douloureux,* which has also been called epileptiform neuralgia and neuralgic chorea, and has been termed a partial chorea or form of chronic chorea. See *Neuralgia.* **T. convul'sif,** a psychosis allied to hysteria, almost like a monomania, attended with involuntary muscular movements, explosive utterances, and curious mental disturbances. **T. douloureux,** painful tic; facial neuralgia; see *Tic.* **T. non-douloureux,** see *Tic.* **T. rotatoire,** a hypercinesis of the muscles supplied with nervous distribution from the external branch of the spinal nerve. The term *spasmodic torticollis* has been applied to one variety of it. **T., spasmod'ic,** neuralgia; see *Tic.*

Tick. Ixodes ricinus. **T. wood,** Ixodes ricinus.

Tick'le weed. Veratrum viride.

Tickling, tick'ling ([L.] *titillo,* to tickle). It sometimes means the action of tickling (titillation), at others the sensation produced by this action (pruritus). A sensation which commonly causes laughter

and a state of general spasm that may be dangerous if too long protracted.

Tick'seed sun'flower. Coreopsis trichosperma.

Tick'weed. Hedeoma. **T. sun'flower,** Coreopsis trichosperma.

Ticorea febrifuga, tik-o'ra-ah feb-rif'u-gah. A Brazilian plant, ord. Rutaceæ, the bark of which is intensely bitter, astringent, and antiperiodic. **T. jasminiflo'ra,** a decoction of the leaves is said to be drunk by the Brazilians as a cure for frambœsia.

Tictologia, tik-to-loj'e-ah (*tikto,* to bring forth, *logos,* doctrine). Doctrine of parturition.

Ticunus, tik-u'nus. Curare.

Ti'dal air. The air that passes in and out during each ordinary respiration. See *Respiration.* **T. breath'ing** or **respira'tion,** see *Cheyne-Stokes.*

Tigala, tig'ah-lah. Saccharum.

Tiglia (tig'le-ah) or **Tiglii grana,** tig'le-e gran'ah. See *Croton tiglium.*

Tiglinic (tig-lin'ik) **ac'id.** Acid from oleum tiglii or croton oil.

Tikimma, tik-im'mah. Cacoucia coccinea.

Tilia, til'e-ah. The *Lime, Lind,* or *Linden tree,* ord. Tiliaceæ. The flowers have been considered anodyne and antispasmodic. **T. America'na,** *Linden, Linn, Basswood, Whitewood, Spoonwood.* **T. Canaden'sis,** T. Americana. **T. gla'bra,** T. Americana.

Tillacher'ry cor'tex. Nerium antidysentericum.

Tillandsia usneoïdes, til-land'se-ah us-na-o-e'dees. Spanish moss of Southern United States. Used as an astringent.

Tilma, til'mah (*tillo,* to pluck). Linteum.

Tilmus, til'mus (*tilmos,* pulling). Carphologia. Evulsion.

Tily of the In'dians. Viburnum dentatum.

Timac, ti'mac. East India root; said to possess diuretic properties.

Tim'bre (F.). The quality of sound by which one voice or one instrument can be distinguished from another when producing the same note.

Timidus, tim'id-us. Rectus inferior oculi.

Tin. A solid metal, of a characteristic odor when rubbed; insipid, whitish; s. g. 7.291; giving a peculiar tinkling sound when struck. It has been used in medicine as a mechanical anthelmintic in the form of pulvis stanni or granular tin. **T., but'ter of,** tin, muriate of. **T., chlo'ride or chlo'ruret of,** tin, muriate of. **T., deutohydrochlo'rate of,** tin, muriate of. **T. foil** is used for plugging carious teeth, etc. **T. glass,** bismuth. **T., gran'ular,** see *Tin.* **T., mu'riate of,** *Fuming liquor of Libavius, Salt of tin, Butter, Deutohydrochlorate,* or *Superoxygenated muriate of tin,* formed by action of muriatic acid on tin. Violent cathartic, in dose of gr. ij or iij. Also used for injection in gonorrhœal and purulent discharges from the vagina. **T., mu'riate of, superox'ygenated,** tin, muriate of. **T. o'leate,** see *Oleate.* **T., salt of,** tin, muriate of. **T., sul'phuret of,** see *Aurum musivum.*

Tinagmus, tin-ag'mus (*tinagmos,* a shaking). Concussion.

Tinasmus, tin-az'mus. Tenesmus.

Tincal, tin'kal. Crude borax.

Tinctu'ra (*tingo,* to dye). Tincture. Preparations made by the extraction of various principles or the solution of different medicinal substances by means of alcohol, ether, or spirit of ammonia, the process employed being that of maceration, digestion, or percolation. The word is now applied only to solutions in alcohol, unless it is distinctly stated that ammonia or ether is employed, when the solution is called an ammoniated tincture or ethereal tincture. Full directions for the preparation of tinctures are given in the U. S. and other Pharmacopœias. **T. absin'thii compos'ita,** *Compound tincture of absinth* or *wormwood* (absinth., artem. pontic., caryoph., āā ℥ss; sacch., ℥ij; alcohol., Oss.; Ph. P.); tonic, stomachic, vermifuge, and carminative; dose, fℨij-iv. **T. aca'ciæ cat'echu,** T. catechu. **T. aceta'tis fer'ri cum alcoho'le,** see *T. ferri acetatis.* **T. ac'idi sulphu'rici,** sulphuricum acidum aromaticum. **T. aconi'ti** (Ph. U. S.), **T. aconi'ti radi'cis,** *Tincture of aconite root* (aconit., ℥xiss; acid. tartaric., gr. xlviij; alcohol., q. s. to make Oij); uses, same as the next; dose, gtt. j–iij. Externally employed in neuralgia, but with caution as to its after-effects. **T. aconi'ti fo'lii** or **folio'rum,** *Tincture of aconite* (aconit. folior., ℥iv; alcohol. dilut., Oij). It is rubbed on the part affected in neuralgia. Internally, it may be given in dose of gtt. x, but tincture aconiti (tincture of the root) is always prescribed instead. **T. æthe'rea camphora'ta** (camphor., p. 1; æther. sulphuric., p. 2); stimulant in atonic diseases, arthritic cardialgia, and spasm; dose, ♏x–xx in white wine. **T. æthe'rea fer'ri,** tinctura sulphurico-ætherea ferri. **T. alcohol'icæ chi'næ compos'ita,** T. cinchonæ composita. **T. alcohol'ica cor'ticum aurantio'rum Whyt'tii,** tinctura cinchonæ amara. **T. alexipharm'ica Hux'hami,** tinctura cinchonæ composita. **T. al'oës** (Ph. U. S.), *T. aloës Socotrinæ, Tincture of aloes* (aloes Socot., ℥iii¼; extract. glycyrrh., ℥iii¼; alcohol. dilut., q. s. to make Oij); properties, those of aloes; dose, fℨss–iss. **T. al'oës æthe'rea,** *T. aloës vitriolata, Æthereal tincture of aloes* (aloës Socot., myrrh., āā ℥iss; croci, ℥j; sp. ætheris sulph., Oj); stimulant and cathartic; dose, fℨj–ij. **T. alo'ës compos'ita,** *Tinctura aloës cum myrrhâ, T. aloës et myrrhæ* (Ph. U. S.), *T. aloës et myrrhæ crocata, Elixir of long life, Compound tincture of aloes* (aloës, myrrhæ, āā ℥iij; alcohol., q. s. to make Oij); a modification of the elixir proprietatis of Paracelsus; purgative and stomachic; dose, fℨj–ij. **T. al'oës et myr'rhæ,** T. aloës composita. **T. al'oës et myr'rhæ croca'ta,** T. aloës composita. **T. al'oës vitriola'ta,** T. aloës ætherea. **T. ama'ra,** T. gentianæ composita. **T. ammo'niæ compos'ita,** spiritus ammoniæ succinatus. **T. amo'mi repen'tis,** T. cardamomi. **T. amo'mi zingib'eris,** T. zingiberis. **T. angustu'ræ,** *Tincture of angustura* (cort. cuspar., ℥ij; sp. vin. ten., Oij); dose, fℨj–ij. **T. antifebri'lis Warbur'gi,** see *Bebeeru.* **T. antiodontal'gica,** *Toothache tincture* (tannin, ℈j; mastich., gr. v; æther., ℥ij); to be applied on cotton wool to the tooth previously dried. **T. aristolochi'æ serpenta'riæ,** T. serpentariæ. **T. ar'nicæ flo'rum** (Ph. U. S.), *Tincture of arnica;* T. of arnica flowers (arnic. flor., ℥vi¼; alcohol. dilut., q. s. to make Oij); dose, ♏v–x. Applied, diluted with an equal proportion of water, by means of lint, as an excitant to bruises and in cases of neuralgia. *Tinctura arnicæ* (Ph. Br.) is much weaker. **T. ar'nicæ radi'cis** (Ph. U. S.), tincture of arnica root (arnica root, ℥iij; diluted alcohol, q. s. to make Oij); dose, ♏xx–xxx. **T. aromat'ica,** T. cinnamomi composita. **T. aromat'ica ammonia'ta,** spiritus ammoniæ aromaticus. **T. asafœ'tidæ** (Ph. U. S.), *Tincture of asafetida* (asafœtid., ℥vj; alcohol., q. s. to make Oij); dose, gtt. xv–fℨj. **T. asafœ'tidæ ammonia'ta,** spiritus ammoniæ fœtidus. **T. auran'tii ama'ri** (Ph. U. S.), *Tincture of bitter orange-peel* (aurant. cort. amar., ℥vj; alcohol. dilut., q. s. to make Oij); stomachic; adjunct to stomachic draughts; dose, ♏xxx–fℨij. **T. auran'tii dul'cis** (Ph. U. S.), Tincture of sweet orange-peel (sweet orange-peel, ℥v¾; alcohol, q. s. to make Oij); agreeable adjuvant in mixtures or prescriptions. **T. auran'tii recen'tis,** tincture of fresh orange-peel (bitter orange, rectified spirit, āā q. s.); dose, fℨj. **T. aur'ea,** alcohol sulphurico-æthereus ferri. **T. belladon'næ** (Ph. U. S.), *Tincture of belladonna* (belladonnæ folior., ℥iv¾; alcohol. dilut., q. s. to make Oij); dose, ♏xx. *Tinctura belladonnæ* (Ph. Br.) is half the strength. **T. benzo'ini** (Ph. U. S.), *Tincture of benzoin* (benzoin., ℥v¾; alcohol., q. s. to make Oij). **T. benzo'ini compos'ita** (Ph. U. S.), *T. benzoës composita, Compound tincture of benzoin, Friar's* or *Vervain's balsam, Wade's* or *Jesuits' drops, Commander's* or *Wound balsam, Balsam for cuts* (benzoin., ℥iiiss; styrac., ℥iiss; balsam. tolut., ℥i¼; aloës, gr. cclx; alcohol., q. s. to make Oij); stimulant, used chiefly to wounds and ulcers; stimulating expectorant. The basis of *Turlington's balsam of life, Turlington's balsam,* is the compound tincture of benzoin. The following form was recommended by a committee of the Philadelphia College of Pharmacy: Alcohol., Oviij; benzoin, ℥xij; styrac. liquid., ℥iv; aloës Socotrin., ℥j; bal-

sam. Peruvian., ℥ij; myrrhæ, ℥j; rad. angelic., ℥ss; balsam. tolut., ext. glycyrrh., āā ℥iv. **T. bryo'niæ,** tincture of bryonia (bryonia, ℥ii¼; alcohol, q. s. to make Oij); purgative; dose, f℥j–ij. **T. buch'u,** *Tincture of buchu* (buch., ℥iiss; spirit. tenuior., Oj; Ph. Br.); dose, f℥i–iv. See *Diosmæ.* **T. buck'u,** tinctura buchu. **T. calend'ulæ,** tincture of calendula (calendulæ, ℥vi¼; alcohol. dilut., q. s. to make Oij); used externally like tincture of arnica. **T. calum'bæ** (Ph. U. S.), *T. columbæ* or *colombæ, Tincture of calumba, calomba,* or *columbo, Columbo bitters* (columb., ℥iij; alcohol., aquæ, āā q. s. to make Oij); dose, ♏xxx–f℥iv. **T. cam'phoræ,** spiritus camphoræ. **T. cam'phoræ compos'itæ,** *T. opii camphorata* (Ph. U. S.), *T. camphoræ cum opio, Compound tincture* or *camphorated tincture of opium, Compound tincture of camphor, Paregoric elixir* (opii, acid. benzoic., āā gr. xxxv; ol. anisi, ♏xxxvij; glycerin, f℥v; camphor., gr. xxxv; alcohol. dilut., q. s. to make f℥xx (one fluidounce contains nearly gr. ij of opium); anodyne; dose, f℥j–iij. **T. can'nabis In'dicæ** (Ph. U. S.), *Tincture of Indian hemp, Tinctura cannabis, Tincture of hemp* (cannab. Indicæ, ℥vss; alcohol., q. s. to make Oij); dose, ♏xxx. **T. canthar'idis** (Ph. U. S.), *Tincture of cantharides, Tincture of blistering* or *Spanish flies* (cantharid., gr. dc; alcohol., q. s. to make Oij); stimulant and diuretic; not often used internally; dose, gtt. v–x. Externally, stimulant. **T. cap'sici** (Ph. U. S.), *Tincture of capsicum* or *Cayenne pepper* (capsic., gr. dc; alcohol., aquæ, āā q. s. to make Oij); stimulant; dose, ♏xxx–f℥j. **T. cardamo'mi** (Ph. U. S.), *Tincture of cardamom* (cardam., ℥iv¾; alcohol. dilut., q. s. to make Oij); use the same as the seeds; dose, f℥j–iv. **T. cardamo'mi compos'ita** (Ph. U. S.), *Compound tincture of cardamom, Stomach tincture* (cardamom., gr. cclxxx; carui, gr. cxl; cinnam., gr. cclxxx; cocci., gr. lxx; glycerin., f℥iss; alcohol. dilut., q. s. to make Oij); stomachic and carminative; dose, f℥ij–iv. **T. carminati'va Syl'vii,** *Carminative elixir of Sylvius* (rad. angelic., 4 p.; rad. imperator., galang., āā 6 p.; fol. rosmarin., majoran., rutæ, basilic., āā 48 p.; baccar. laur. nobil., 12 p.; sem. angelic., ligust. levist., anis., āā 16 p.; zingib., nuc. moschat., āā 6 p.; cinnam., 12 p.; caryoph., cort. limon., āā 4 p.; alcohol., 1500 p.); a warm stomachic, carminative, etc.; dose, ♏xxx–f℥ss. **T. cascaril'læ,** *Tincture of cascarilla* (cascarill, cort., ℥iiss; sp. ten., Oj; Ph. Br.); dose, f℥j–ij. **T. casto'rei,** *Tincture of castor* (castor., ℥ij; alcohol., Oij); tonic and antispasmodic; dose, ♏x–f℥ij. **T. casto'rei compos'ita,** *T. castorei ammoniata, Compound tincture of castor* (cast., ℥j; asafœtid., ℥ss; alcohol. ammoniat., Oj); antispasmodic; dose, f℥j–iv; called also *Elixir fœtidum, Tinctura castorei fœtida* or *fœtida ammoniata.* **T. cat'echu,** *Tincture of catechu* (catech., ℥iij; cinnam., ℥ij; alcohol. dilut., q. s. to make Oij); astringent; dose, f℥j–ij. **T. cat'echu compos'ita** (Ph. U. S.) (catech., ℥iv; cinnamomi, f℥ij, gr. ccc; alcohol. dilut., q. s. to make Oij); astringent; dose, ♏xxx–f℥ij. **T. chiret'tæ,** *T. chiratæ* (Ph. U. S.), *Tincture of chiretta* or *chirata* (chirett., ℥iij; alcohol. dilut., q. s. to make Oij); dose, f℥j–ij as a tonic. **T. chlorofor'mi compos'ita,** *Compound tincture of chloroform* (chloroform., f℥ij; spirit. rectificat., f℥viij; tinct. cardamom. comp., f℥x; Ph. Br.); dose, ♏xx–f℥j. **T. chlorofor'mi et morphi'næ** (chloroform., f℥j; ætheris., f℥ij; spirit. rectificat., f℥j; morph. hydrochlorat., gr. viij; acid. hydrocyanic. dilut., f℥ss; ol. menth. piperit., ♏iv; extract. glycyrrhiz. liquid., f℥j; theriac., f℥j; syrup., q. s.; Ph. Br.); dose, ♏v–x; substitute for chlorodyne. **T. cicu'tæ,** T. conii maculati. **T. cimicif'ugæ** (Ph. U. S.) (cimicifugæ, ℥vss; alcohol, q. s. to make Oij); dose, f℥j–iv. **T. cincho'næ** (Ph. U. S.), *Tincture of cinchona* or *of bark* (cinchon. flav., ℥vi¼; glycerin., f℥iij¼; alcohol., aquæ, āā q. s. to make Oij); dose, f℥j–iv. **T. cincho'næ æthe'rea compos'ita,** *Chaussier's antiseptic elixir* (cinchon. officin., ℥ij; cascarill., ℥ss; cinnam., ℥iij; croci, ℥ss; sacch. alb., ℥xxxviij; vin. alb. Hispanic. or vin. Muscat., alcohol., āā Oj; æther. sulphuric., f℥iss); tonic, stimulant, and antiseptic; dose, f℥ss–j. **T. cincho'næ ama'ra** (cinch., p. viij; gentian. rad., cort. aurant., āā p. iij; alcohol. [s. g. .900], 96 p.); dose, one or two teaspoonfuls. **T. cincho'næ ammonia'ta,** *Ammoniated* or *Volatile tincture of bark* (cinchon. lancifol. cort., ℥iv; sp. ammon. aromat., Oij); in dyspepsia combined with acidity and languor. **T. cincho'næ compos'ita** (Ph. U. S.), *Compound tincture of cinchona* or *bark* or *Peruvian bark, Huxham's tincture of bark* (cinchon. rubr., ℥iij; aurant. amar. cort., ℥iiss; serpentariæ, ℥ss; glycerin., f℥ii¼; alcohol., aquæ, āā q. s. to make Oij); more grateful than the simple tincture; dose, f℥j to f℥iij. **T. cincho'næ fla'væ,** *Tincture of yellow cinchona* (cinchon. flav., ℥iv; spirit. tenuior., Oj; Ph. B.); dose, ♏xxx–f℥ij. **T. cinnamo'mi** (Ph. U. S.), *Tincture of cinnamon* (cinnam., ℥iij; alcohol., aquæ, āā q. s. to make Oij); stomachic; dose, f℥j–iij. **T. cinnamo'mi compos'ita,** *Compound tincture of cinnamon* (cinnam., ℥j; cardam., ℥ss; zingib., ℥iij; alcohol. dilut., Oij); use same as the last; dose, f℥j–iij. **T. coc'ci cac'ti** (Ph. B.), *T. cocci, Tincture of cochineal* (cocci, ℥iiss; spirit. tenuior., Oj); chiefly a coloring ingredient; at times given in nervous affections; dose, gtt. xv–f℥j. **T. de cochlea'riis** (fol. cochlear., rad. armoraciæ, alcohol.); antiscorbutic; dose, f℥ij–f℥j. **T. col'chici** (Ph. U. S.), *T. c. seminis, Tincture of colchicum, T. of colchicum seed* (colchic. sem., ℥iv ¾; alcohol. dilut., q. s. to make Oij); dose, ten to thirty drops. **T. col'chici compos'ita,** spiritus colchici ammoniatus. **T. col'chici sem'inis,** T. colchici. **T. colom'bæ,** T. calumbæ. **T. coni'i** (Ph. U. S.), *Tincture of hemlock, T. of conium* (conii, ℥iv¾; acid. hydrochloric. dilut., f℥j; alcohol. dilut., q. s. to make Oij); dose, ♏xx–xl. A *Tincture of hemlock fruit, Tinctura conii* (hemlock fruit or seeds, ℥iiss; proof spirit, Oj), is official in the British Pharmacopœia; dose, gtt. xxx. **T. coni'i macula'ti,** T. conii. **T. convol'vuli jalap'æ,** T. jalapii. **T. cort'icis auran'tii,** T. aurantii. **T. cort'icis Peruvia'ni compos'ita,** T. cinchonæ comp. **T. cort'icis Peruvia'ni sim'plex,** T. cinchonæ. **T. cort'icis Peruvia'ni volat'ilis,** T. cinchonæ ammoniata. **T. cro'ci** (Ph. U. S.), *T. croci sativi, Tincture of saffron* (croci, ℥iij; alcohol. dilut., q. s. to make Oij); slightly stomachic; dose, f℥i–iij. **T. de cro'co compos'ita,** *Compound tincture of saffron, Elixir of Garus* (aloës Socotr., myrrh., croci, cinnam., nuc. moschat., caryoph., alcohol., aq. flor. aurant., syrup of capillaire); aromatic, cordial, stomachic. **T. croto'nis,** *Tincture of croton* (alcohol, f℥iv; bruised seeds of Croton tiglium, ℥j); cutaneous stimulant. **T. croto'nis eleuthe'riæ,** T. cascarillæ. **T. cube'bæ** (Ph. U. S.), *Tincture of cubeb* or *cubebs* (cubeb., ℥iij; alcohol. dilut., q. s. to make Oij); dose, f℥j–ij. **T. cuspa'riæ,** T. angusturæ. **T. digita'lis** (Ph. U. S.), *T. digitalis purpureæ, Tincture of digitalis* (digital., ℥iv¾; alcohol. dilut., q. s. to make Oij); therapeutic action same as that of the leaves; dose, gtt. x. **T. er'gotæ,** *Tincture of ergot* (ergot., ℥v; sp. tenuior., Oj); dose, ♏xx–f℥j. **T. er'gotæ æthe'rea,** *Ethereal tincture of ergot* (ergot., ℥xv; æther., Oij); dose, f℥j-iss. **T. febrif'uga docto'ris Hux'hami,** T. cinchonæ composita. **T. fer'ri aceta'tis** (Ph. U. S.), *Tincture of acetate of iron,* T. of ferric acetate (liquor. ferri acetat., f℥iv; alcohol., f℥iij, f℥iij; æther. acetic., f℥ij); dose, ♏xx-xl; tonic and astringent. **T. fer'ri ammonia'ta** or **ammoniaca'lis,** *Tincture of ammoniated iron* (ferri ammon., ℥iv; sp. ten., Oj); use same as that of the ammoniated iron; dose, f℥ss-ij. **T. fer'ri ammoniochlo'ridi,** *Tincture of ammoniochloride of iron* (ferri ammoniochlorid., ℥iv; alcohol. dilut., aquæ destillat., āā Oj); dose, gtt. x–xx. **T. fer'ri chlo'ridi** (Ph. U. S.), *Tincture of chloride* or *muriate of iron, Tincture of ferric chloride, Tincture of steel* (liq. ferri chloridi, f℥vii¾; alcohol., f℥xxv); s. g. .0980; tonic and styptic; dose, ♏x–xxx, well diluted to protect the teeth; it has been given also with advantage in erysipelas and scarlatina in the dose of ♏x–xx every two or three hours. **T. fer'ri muria'tis,** T. ferri chloridi. **T. fer'ri perchlo'ridi,** *Tincture of perchloride of iron* (strong solution of perchloride of iron, f℥v; rectified spirit, f℥xv; Ph. Br.); dose, ♏x–xxx. *Bestucheff's*

tincture or *Klaproth's tincture* is an ethereal tincture of chloride of iron, composed of dry perchloride of iron, p. j; Hoffmann's anodyne liquor, p. vij. **T. fer'ri sesquichlo'ridi**, T. ferri chloridi. **T. fer'ulæ asafœt'idæ**, T. asafœtidæ. **T. flo'rum martia'lium**, T. ferri ammoniata. **T. fœt'ida**, T. asafœtidæ. **T. fœt'ida ammonia'ta**, T. castorei composita. **T. fulig'inis**, see *Fuligo*. **T. gal'bani**, *Tincture of galbanum* (galb., ℥ij; sp. tenuior., Oij); stimulant and antispasmodic; dose, f℥j–iij. **T. gal'læ** (Ph. U. S.), T. gallarum, *Tincture of galls* or *of nutgall* (gallæ, ℥viss; glycerin., f℥iiss; alcohol. dilut., q. s. to make Oij); astringent; dose, f℥j–iij. **T. gelsem'ii** (Ph. U. S.), tincture of gelsemium (gelsemii, ℥iv¼; alcohol., q. s. to make Oij); dose, ♏x–xx. **T. gentia'næ compos'ita** (Ph. U. S.), *Compound tincture of gentian*, *Spirit bitters* (gentian., ℥v; aurant. amar. cort., ℥iiss; cardamom., ℥ii¼; alcohol. dilut., q. s. to make Oiv); tonic and stomachic; dose, f℥j–iij. **T. guai'aci** (Ph. U. S.), *Tincture of guaiacum*, *T. of guaiac* (guaiac., ℥v¾; alcohol., q. s. to make Oij); stimulant and sudorific, especially in rheumatic and arthritic cases. **T. guai'aci ammonia'ta**, *T. guaiaci volatilis*, *T. guaiaci*, *Ammoniated tincture of guaiacum*, *Volatile tincture of guaiacum* (guaiac. pulv., ℥vi¼; sp. ammon. arom., q. s. to make Oij); properties same as the last in rheumatism and amenorrhœa, but more excitant; dose, f℥j–ij. **T. helleb'ori** or **helleb'ori ni'gra**, *Tincture of black hellebore* (helleb. nigr., ℥iv; alcohol. dilut., Oij); dose, ♏xxx–f℥j. **T. herba'rum recent'ium**, tincture of fresh herbs (fresh herbs, ℥xvj; alcohol, Oiij). **T. hi'era**, vinum aloës. **T. hu'muli** (Ph. U. S.), *Tincture of hops* (humuli, ℥vi; alcohol. dilut., q. s. to make Oij); tonic and sedative; dose, ♏xxx–f℥iij. **T. hydras'tis** (Ph. U. S.), *Tincture of hydrastis* (hydrastis, ℥vi¼; diluted alcohol, q. s. to make Oij); dose, ♏xxx–f℥j. **T. hyoscy'ami** (Ph. U. S.), *Tincture of henbane*, *T. of hyoscyamus* (hyoscyam., ℥iv¾; alcohol. dilut., q. s. to make Oij); narcotic, anodyne; dose, gtt xx–f℥ij. **T. igna'tiæ** (Ph. U. S) (ignatiæ, ℥viij; alcohol., Oivss; aquæ, Oss); same therapeutic action as nux vomica; dose, ♏x–xx. **T. i'odi** (Ph. U. S.), *T. iodinii*, *T. iodini*, *Tincture of iodine* (iodin., gr. cclv; alcohol., Oss); it has been much used in goitre, etc.; dose, ten drops. *Tinctura iodi* (Ph. B.) is made of iodine, ℥ss; iodide of potassium, ℥ss; rectified spirit, Oj (imp.); dose, ♏x to xx. An ethereal and a chloroform tincture of iodine have been used to affect the system with iodine by inhalation. Under the name *Tinctura iodinii decolorata* a colorless alcoholic solution of iodine in alcohol has been used, the color having been destroyed by the ammonia. **T. io'dini compos'ita**, *T. iodinii composita*, *Compound tincture of iodine* (iodin., ℥ss; potassii iodid., ℥j; alcohol., Oj); formerly officinal; dose, 10 to 30 drops. **T. ipecacuan'hæ et o'pii** (Ph. U. S.) (tinct. opii deodorat., f℥ix¾; extract. ipecac. fluid., f℥j; alcohol. dilut., q. s. to make f℥x); a means of giving Dover's powder in liquid form; dose, ♏x. **T. jaboran'di**, *Tincture of jaborandi* (jaborandi, ℥v; proof spirit, Oj; Ph. Br.); dose, f℥j–ij. **T. jalap'ii**, *T. jalapæ* or *convolvuli jalapæ*, *Tincture of jalap* (℥vj of jalap; alcohol, 2 measures; water, 1 measure; and Oij of tincture passed by percolation); cathartic; dose, f℥j to f℥iv. The Ph. Br. has ℥iiss jalap to an imp. pint of proof spirit. **T. jalap'ii compos'ita** (jalap., ℔ss; scammon., ℥j; alcohol. (22°), Ovj); dose, 60 to 100 drops. **T. japon'ica**, tinctura catechu. **T. ki'næ ki'næ æthe'rea compos'ita**, tinctura cinchonæ ætherea composita. **T. kinki'næ ama'ra**, tinctura cinchonæ amara. **T. ki'no** (Ph. U. S.), *Tincture of kino* (kino, ℥vj; glycerin., f℥j; alcohol., aquæ, āā q. s. to make Oss); astringent; dose, f℥j to f℥ij. **T. krame'riæ** (Ph. U. S.), *Tincture of krameria* or *rhatany* (kramer., ℥vi¼; alcohol. dilut., q. s. to make Oij); dose, f℥j–ij. **T. lactuca'rii**, *Tincture of lactucarium* (lactucar., ℥iv; sp. tenuior., Oij imp.); dose, ♏xxx–f℥j. **T. lar'icis**, *Tincture of larch* (larch bark, ℥iiss; rectified spirit, Oj; Ph. Br.); dose, ♏xx–xxx. **T. lau'ri cinnamo'mi**, tinctura cinnamomi. **T. lavand'ulæ compos'ita** (Ph. U. S.) *Compound tincture of lavender* (ol. lavandul., f℥j: ol. rosmarin., f℥ij; cinnamon, ℥ii¼; caryophyll., ℥ss; myristicæ, ℥i¼; santal. rubr., ℥j; alcohol., Ovj; aquæ, Oij; alcohol. dilut., q. s. to make Oviij); adjuvant and corrigent in prescriptions; used in flatulence, gastric disturbance, etc.; dose, ♏xxx–f℥j. The Ph. Br. makes this preparation as follows: Ol. lavand., f℥iss; ol. rosmarin., ♏x; cinnamon, gr. cl; myristicæ, gr. cl; santal. rubr., gr. ccc; spirit. rectificat., Oij imp. **T. limo'nis**, *Tincture of lemon-peel* (limon. cort., ℥iiss; sp. tenuior., Oj imp.; Ph. Br.); dose, f℥j–ij. **T. lobe'liæ** (Ph. U. S.), *Tincture of lobelia* (lobel., ℥vi¼; alcohol. dilut., q. s. to make Oij); dose; ♏xxx–f℥j; as an emetic, f℥ij. **T. lobe'liæ æthe'rea**, *Ethereal tincture of lobelia* (lobel., ℥iiss; sp. æther. sulph., Oj imp.; Ph. Br.); dose, same as the last. **T. lu'puli**, tinctura humuli; T. lupulinæ. **T. lupuli'næ**, *T. lupuli*, *Tincture of lupulin* (lupulin, ℥iv; alcohol., Oij); dose, f℥j–ij. **T. lyt'tæ**, tinctura cantharidis. **T. mar'tis Glauberi**, see *Ferrum tartarizatum*. **T. mar'tis Mynsich'ti**, tinctura ferri ammoniata. **T. mar'tis in spir'itú sa'lis**, tinctura ferri chloridi. **T. mar'tis tartariza'ta**, see *Ferrum tartarizatum*. **T. mar'tis vino'sa**, vinum ferri. **T. mati'co** (Ph. U. S.), *Tincture of matico* (matico., ℥iij; alcohol. dilut., q. s. to make Oij); dose, f℥j–ij. **T. melampo'dii**, tinctura hellebori nigri. **T. mel'oës vesicato'rii**, tinctura cantharidis. **T. metallo'rum**, lilium paracelsi. **T. mimo'sæ cat'echu**, tinctura catechu. **T. mos'chi** (Ph. U. S.), *Tincture* or *Essence of moschus* or *musk* (mosch., gr. cccxl; alcohol., f℥iv; aquæ, f℥iiiss; alcohol. dilut., q. s. to make Oss); dose, f℥j–ij. **T. myr'rhæ** (Ph. U. S.), *Tincture of myrrh* (myrrhæ, ℥vss; alcohol., q. s. to make Oij); tonic, antiseptic, and detergent, chiefly used in gargles, and applied to foul ulcers, spongy gums, etc. (myrrh., ℥iiss; spirit. rectificat., Oj imp.; Ph. Br.). **T. nervi'na Bestuchef'fii**, tinctura (or alcohol) sulphurico-ætherea ferri. **T. nervi'na halen'sis**, tinctura (or alcohol) sulphurico-ætherea ferri. **T. nervinoton'ica**, alcohol sulphurico-æthereus ferri. **T. nu'cis vom'icæ**, a formula for its preparation is given in the U. S. Pharmacopœia; the tincture is of the strength of about 20 parts of nux vomica in every 100 parts. The formula of the Br. Pharmacopœia is as follows: extract. nucis vomicæ, gr. cxxxiij; aquæ destillat., f℥iv imp.; spirit. rectificat., q. s. to make f℥xx; dose, gtt v to xx. **T. o'lei men'thæ piperi'tæ**, spiritus menthæ piperitæ. **T. o'lei men'thæ vir'idis**, spiritus menthæ viridis. **T. o'pii** (Ph. U. S.), *Tincture of opium*, *Laudanum*, *Liquid laudanum* (opii, ℥j; aquæ, f℥iv; alcohol., f℥ivss; alcohol. dilut., q. s. to make f℥x); eleven minims of the tincture nearly represent one grain of opium; properties, those of opium; dose, gtt. x–xv. The British Pharmacopœia contains the following formula: opii, ℥iss; spirit. tenuior., Oj. **T. o'pii aceta'ta**, *Acetated tincture of opium* (opii, ℥ij; aceti destill., f℥xij; alcohol., Oss); twenty drops are equivalent to a grain of opium. **T. o'pii ammonia'ta** (Ph. U. S.), *Ammoniated tincture of opium*, *Edinburgh paregoric elixir* (acid. benz., croci, āā ℥iij; opii, gr. c; ol. anisi, f℥j; liquor. ammonii fort., f℥iv; spirit. rectificat., f℥xvj; Ph. Br.); each f℥ contains 5 grains of opium; used like the tinctura camphoræ composita. **T. o'pii camphora'ta** (Ph. U. S.), tinctura camphoræ composita. **T. o'pii deodora'ta** (Ph. U. S.), *Deodorized tincture of opium* (opii, gr. cccl; æther., f℥iiss; alcohol., f℥ii¼; aquæ, q. s. to make f℥x); its strength is that of tinctura opii. **T. physostig'matis** (Ph. U. S.), *Tincture of physostigma* (physostigma, ℥ii¾; alcohol., q. s. to make Oij); dose, ♏xx–xl. **T. plumbo'sa**, liquor plumbi subacetatis dilutus. **T. podophyl'li**, *Tincture of podophyllum* (resin. podophyll., gr. clx; spirit. rectificat., Oj imp. (Ph. Br.); dose, ♏xv–f℥j. **T. pyre'thri** (Ph. U. S.), *Tincture of pyrethrum* or *pellitory* (pyreth., ℥vss; alcohol., q. s. to make Oij). **T. quas'siæ**, *T. quassiæ excelsæ*, *Tincture of quassia* (quassiæ, ℥iij; alcohol. dilut., q. s. to make Oij); tonic; dose, f℥j–ij. **T. quas'siæ compos'ita**, *Compound tincture of quassia* (cardam. sem., cocci, āā ℥ss; cinnam., quassiæ, āā ℥vj; uvar. passar., ℥vij; sp. tenuior.,

Oij imp.); dose, as a tonic, f℥j–ij. **T. qui'næ compos'ita,** *Compound tincture of quinia* (quinæ sulph., ℥v, ℈j; tinct. aurantii Oij imp.). Each f℥ contains a grain of the sulphate. **T. qui'næ sulpha'tis,** *Tincture of sulphate of quinia* (sulphate of quinia, gr. vj; alcohol., f℥j.—M.); dose, f℥j–iv in the day. **T. qui'niæ,** *Tincture of quinia* (quin. sulph., gr. clx; tinct. aurantii, Oj; Ph. Br.); dose, f℥ss–ij. **T. quini'næ,** tincture of quinine (quin. hydrochlorat., gr. clx; tinct. aurantii cort., Oj imp.; Ph. Br.); dose, f℥j–ij, equivalent to gr. j or ij of quinine sulphate. **T. quini'næ ammonia'ta** (quin. sulph., gr. clx; aquæ ammoniæ, f℥iiss imp.; spirit. tenuior., f℥xviiss imp.; Ph. Br.); dose, f℥j–ij, equivalent to gr. j or ij of quinine sulphate. **T. rhabar'bari,** tinctura rhei. **T. rhabar'bari compos'ita,** tinctura rhei composita. **T. rhabar'bari vino'sa,** vinum rhei palmati. **T. rhe'i** (Ph. U. S.), *Tincture of rhubarb* (rhei, ℥iii¾; cardam., gr. ccxc; alcohol. dilut., q. s. to make Oij); stomachic or purgative, according to the dose employed; fl℥–ij as a stomachic, f℥iv–f℥j as a purgative. **T. rhe'i et al'oës,** *Tincture of rhubarb and aloes* (rhei, ℥x; aloës, ℥vj; cardam., ℥ss; alcohol. dilut., Oij); properties same as T. rhei. **T. rhe'i aromat'ica** (Ph. U. S.), *Aromatic tincture of rhubarb* (rhei, ℥viss; cinnamom., ℥i¼; caryophyll., ℥i¼; myristicæ, gr. cclxxiij; alcohol. dilut., q. s. to make Oij); dose, ♏xxx–f℥j. **T. rhe'i compos'ita,** *Tincture of rhubarb* (rhei. rad., ℥ij; glycyrrhiz. rad., ℥ss; zingib. rad., croci stigmat., āā ℥ij; aquæ, f℥xij; sp. ten., Oj); properties same as T. rhei. **T. rhe'i dul'cis** (Ph. U. S.), *Sweet tincture of rhubarb* (rhei, ℥iiss; glycyrrhiz., ℥i¼; anise, ℥i¼; cardamom., gr. cxl; alcohol. dilut., q. s. to make Oij); dose, f℥ij–iij. **T. rhe'i et gentia'næ,** *Tinctura rhei amara, Tincture of rhubarb with gentian* (rhei, ℥ij; gentian, ℥ss; alcohol. dilut., Oij); properties same as the last. **T. rhe'i et sen'næ,** *Tincture of rhubarb and senna, Warner's gout cordial* (rhei, ℥j; sennæ, ℥ij; coriandr., fœnicul., āā ℥j; glycyrrhiz., ℥ss; uvar. passar., ℔ss; alcohol. dilut., Oiij); dose, f℥ss–ij. **T. rhœ'i,** tinctura rhei. **T. rhœ'i ama'ra,** tinctura rhei et gentianæ. **T. sabi'næ,** *Tincture of savin* (savine, ℥iiss; proof spirit, Oj imp.; Ph. Br.); dose, ♏xv–xxx. **T. sa'cra,** vinum aloës. **T. sanguina'riæ** (Ph. U. S.), *Tincture of sanguinaria* or *bloodroot* (sanguinar., ℥ivss; alcohol., aquæ, āā q. s. to make Oij); dose, 30–60 drops as an expectorant. **T. sapo'nis camphora'ta,** linimentum saponis camphoratum. **T. sapo'nis et o'pii,** linimentum saponis et opii. **T. sapo'nis vir'idis,** *Tincture of green soap* (sapon. viridis, ℥x; ol. lavandulæ, f℥iij; alcohol., q. s. to make f℥xv); used externally in dermatological practice. **T. scil'læ** (Ph. U. S.), *Tincture of squill.* (scillæ, ℥iv¾; alcohol. dilut., q. s. to make Oij); dose, ♏x–xx as an expectorant; larger doses may be emetic. **T. sedati'va,** tinctura opii. **T. sen'egæ,** *Tincture of senega* (senegæ rad., ℥iiss; spirit. tenuior., Oj imp.; Ph. B.); dose, ♏xxx–f℥ij. **T. sen'næ,** *T. sennæ composita, Tincture of senna* (sennæ, ℥iiss; carui sem., coriandr., āā ℥ss; sp. ten., Oj imp.; Ph. B.); dose, f℥j–iv; stomachic, carminative, and cathartic. **T. sen'næ et jala'pæ,** *Tincture of senna and jalap* (sennæ, ℥iij; jalap., ℥j; coriandr., carui, āā ℥ss; cardam., ℥ij; sacch., ℥iv; alcohol. dilut., Oiij); dose, f℥ij–f℥j. **T. serpenta'riæ** (Ph. U. S.), *Tincture of serpentaria* or *snakeroot* (serpent., ℥iij; alcohol. dilut., q. s. to make Oij); tonic; dose, ♏xxx–f℥ij. **T. stomach'ica,** tinctura cardamomi composita. **T. stramo'nii** (Ph. U. S.), *Tincture of stramonium* (stramon. sem., ℥iij; alcohol. dilut., q. s. to make Oij); dose, ♏x–xx. **T. strych'niæ,** *Tincture of strychnia* (alcohol., s. g. .837, Oj; strychniæ, gr. iij); dose, ♏v–xv; properties those of strychnia. **T. sulphu'rico-æthe'rea fer'ri,** *Bestucheff's nervous tincture;* ethereal solution of chloride of iron. Much used in gout, hypochondriasis, etc. **T. sul'phuris volat'ilis,** liquor fumans Boylii. **T. sum'bul** (Ph. U. S.), *Tincture of sumbul* (sumbul. rad., ℥ii¾; alcohol., q. s. to make Oij; Ph. B.); dose, ♏x–xxx. **T. theba'ica,** tinctura opii, vinum opii. **T. toluta'na** (Ph. U. S.), *T. tolutani, T. tolu, T. toluiferæ balsami, T. balsami tolutani, Tincture of Tolu* or *Balsam of Tolu* (bals. tolutan., ℥iij; alcohol, q. s. to make Oij); expectorant and corroborant; dose, ♏xxx–f℥j or more. **T. ton'ica nervi'na halen'sis,** tinctura sulphurico-ætherea ferri. **T. valerian'æ** (Ph. U. S.), *Tincture of valerian* (valerian. pulv., ℥vj; alcohol., aquæ, āā q. s. to make Oij); stimulant and antispasmodic; dose, ♏xxx–f℥ij. **T. valerian'æ ammonia'ta** (Ph. U. S), *T. valerianæ volatilis, Ammoniated* or *Volatile tincture of valerian* (valerianæ, ℥vj; sp. ammon. arom., q. s. to make Oij); properties like the former; dose, ♏xxx–f℥ij. **T. vanil'læ** (Ph. U. S.) (vanillæ, ℥iii¼; sacchar., ℥vj; alcohol., aquæ, āā q. s. to make Oij): used for flavoring purposes. **T. vera'tri,** *T. veratri albi, Tincture of veratrum album* or *white hellebore* (rad. verat. alb., ℥viij; alcohol. dilut., Oiiss); emetic and cathartic, but not very manageable; dose, ♏iij–v. **T. vera'tri vir'idis** (Ph. U. S.), *Tincture of veratrum viride* or of *green* or *American hellebore* (veratr. virid., ℥xivss; alcohol., q. s. to make Oij); sedative. **T. zingib'eris** (Ph. U. S), *Tincture of ginger* (zingib., ℥vss; alcohol., q. s. to make Oij); stimulant and carminative; dose, ♏xxx–f℥j. **T. zingib'eris for'tior,** *Strong tincture of ginger, Essence of ginger* (zingib., ℥x; spirit. rectificat., Oj imp.; Ph. Br.); dose, ♏v–xx.

Tinc'ture. Tinctura. **T. of ab'sinth, com'pound,** tinctura absinthii composita. **T. of ac'onite,** tinctura aconiti. **T. of ac'onite root,** tinctura aconiti radicis. **T. of al'oes,** tinctura aloës. **T. of al'oes, com'pound,** tinctura aloës composita. **T. of al'oes, ethe'real,** tinctura aloës ætherea. **T. of ammo'nia, com'pound,** spiritus ammoniæ succinatus. **T. of angustu'ra,** tinctura angusturæ. **T. of ar'nica,** tinctura arnicæ. **T. of asafet'ida,** tinctura asafœtidæ. **T. of bal'sam of Tolu',** tinctura toluiferæ balsami. **T. of bark,** tinctura cinchonæ. **T. of bark, ammo'niated,** tinctura cinchonæ ammoniata. **T. of bark, com'pound,** tinctura cinchonæ composita. **T. of bark, Hux'ham's,** tinctura cinchonæ composita. **T. of bark, vol'atile,** tinctura cinchonæ ammoniata. **T. of belladon'na,** tinctura belladonnæ. **T. of ben'zoin,** tinctura benzoini. **T. of ben'zoin, com'pound,** tinctura benzoini composita. **T., Bes'tucheff's,** see *Tinctura ferri chloridi.* **T. of blis'tering flies,** tinctura cantharidis. **T. of blood'root,** tinctura sanguinariæ. **T. of bu'chu,** tinctura buchu. **T. of cam'phor, com'pound,** tinctura camphoræ composita. **T. of canthar'ides,** tinctura cantharidis. **T. of cap'sicum,** tinctura capsici. **T. of car'damoms,** tinctura cardamomi. **T. of car'damoms, com'pound,** tinctura cardamomi composita. **T., car'diac, Ry'mer's,** tinctura rhei et aloës. **T. of cascaril'la,** tinctura cascarillæ. **T. of cas'tor,** tinctura castorei. **T. of cas'tor, com'pound,** tinctura castorei composita. **T. of cat'echu,** tinctura catechu. **T. of Cayenne' pep'per,** tinctura capsici. **T. of chiret'ta,** tinctura chirettæ. **T. of cincho'na,** tinctura cinchonæ. **T. of cincho'na, com'pound,** tinctura cinchonæ composita. **T. of cin'namon,** tinctura cinnamomi. **T. of cin'namon, com'pound,** tinctura cinnamomi composita. **T. of coch'ineal,** tinctura cocci cacti. **T. of col'chicum, com'pound,** spiritus colchici ammoniatus. **T. of col'chicum seeds,** tinctura colchici. **T. of colum'bo,** tinctura calumbæ. **T. of cro'ton,** tinctura crotonis. **T. of cu'bebs,** tinctura cubebæ. **T. of digita'lis,** tinctura digitalis. **T. of er'got,** tinctura ergotæ. **T. of er'got, ethe'real,** tinctura ergotæ ætherea. **T. of gal'banum,** tinctura galbani. **T. of galls,** tinctura gallarum. **T. of gen'tian, com'pound,** tinctura gentianæ composita. **T. of gin'ger,** tinctura zingiberis. **T. of guai'acum,** tinctura guaiaci. **T. of guai'acum, ammo'niated,** tinctura guaiaci ammoniata. **T. of guai'acum, vol'atile,** tinctura guaiaci ammoniata. **T. of hel'lebore, Amer'ican,** tinctura veratri viridis. **T. of hel'lebore, black,** tinctura hellebori. **T. of hel'lebore, white,** tinctura veratri. **T. of hem'lock,** tinctura conii. **T. of hemp,** tinctura cannabis Indicæ. **T. of hen'bane,** tinctura hyoscyami. **T. of hops,** tinctura humuli. **T. of In'dian hemp,** tinctura cannabis Indicæ. **T. of i'odine,** tinctura iodini. **T. of i'odine, com'pound,** tinctura iodini composita. **T. of i'ron, ac'etate of,** tinctura

ferri acetatis. **T. of i'ron, ammo'niated,** tinctura ferri ammoniata. **T. of i'ron, ammoniochlo'ride of,** tinctura ferri ammoniochloridi. **T. of iron, mu'riated,** tinctura ferri chloridi. **T. of jal'ap,** tinctura jalapii. **T. of ki'no,** tinctura kino. **T., Klap'roth's,** see *Tinctura ferri chloridi.* **T. of lactuca'rium,** tinctura lactucarii. **T. of lem'on-peel,** tinctura limonis. **T. of lit'mus,** see *Lichen roccella.* **T. of lobe'lia,** tinctura lobeliæ. **T. of lobe'lia, ethe'real,** tinctura lobeliæ ætherea. **T. of Lud'wig,** see *Ferrum tartarizatum.* **T. of lu'pulin,** tinctura lupulinæ. **T. of mati'co,** tinctura matico. **T. of musk,** tinctura moschi. **T. of myrrh,** tinctura myrrhæ. **T., ner'vous, Bes'tucheff's,** tinctura (or alcohol) sulphurico-ætherea ferri. **T. of nut'gall,** tinctura gallæ. **T. of nux vom'ica,** tinctura nucis vomicæ. **T. of oil of pep'permint,** tinctura olei menthæ piperitæ. **T. of oil of spear'mint,** tinctura olei menthæ viridis. **T. of o'pium,** tinctura opii. **T. of o'pium, ac'etated,** tinctura opii acetata. **T. of opium, ammo'niated,** tinctura opii ammoniata. **T. of o'pium, cam'phorated,** tinctura camphoræ composita. **T. of o'pium, deo'dorized,** tinctura opii deodorata. **T. of or'ange-peel,** tinctura aurantii. **T. of quas'sia,** tinctura quassiæ. **T. of quas'sia, com'pound,** tinctura quassiæ composita. **T. of qui'na,** T. quinæ. **T. of qui'na, sul'phate of,** T. quinæ sulphatis. **T. of qui'nia, com'pound,** tinctura quiniæ composita. **T. of qui'nia, sul'phate of,** tinctura quiniæ sulphatis. **T. of rhat'any,** tinctura krameriæ. **T. of rhu'barb,** tinctura rhei. **T. of rhu'barb and al'oes,** tinctura rhei et aloës. **T. of rhu'barb, com'pound,** tinctura rhei composita. **T. of rhu'barb and gen'tian,** tinctura rhei et gentianæ. **T. of rhu'barb and sen'na,** tinctura rhei et sennæ. **T. of saf'fron,** tinctura croci sativi. **T. of saf'fron, com'pound,** tinctura de croco composita. **T. of sen'na,** tinctura sennæ. **T. of sen'na and ja'lap,** tinctura sennæ et jalapæ. **T. of snake'root,** tinctura serpentariæ. **T. of soap, cam'phorated,** linimentum saponis. **T. of Span'ish fly,** tinctura cantharidis. **T. of spear'mint,** tinctura olei menthæ viridis. **T. of squill,** tinctura scillæ. **T. of steel,** tinctura ferri chloridi. **T., stom'ach,** tinctura cardamomi composita. **T. of stramo'nium,** tinctura stramonii. **T. of strych'nia,** tinctura strychniæ. **T., tooth'ache,** tinctura antiodontalgica. **T. of vale'rian,** tinctura valerianæ. **T. of vale'rian, ammo'niated,** tinctura valerianæ ammoniata. **T. of vale'rian, vol'atile,** tinctura valerianæ ammoniata. **T., War'burg's,** see *Bebeeru.* **T. of worm'wood, com'pound,** tinctura absinthii composita.

Tin'der. Boletus igniarius.

Tinea, tin'a-ah. A gnawing worm. Porrigo. **T. asbesti'na,** seborrhœa. **T. amianta'cea** or **amienta'cea,** seborrhœa. **T. bar'bæ,** barber's itch; inflammatory condition of the hair-follicles of the face and neck, due to trichophyton tonsurans. **T. cap'itis,** porrigo. **T. cilia'ris,** see *Ophthalmia tarsi.* **T. circina'ta,** see *Herpes.* **T. circina'ta trop'ica,** *Burmese, Chinese, Indian,* or *Oriental ringworm;* severe variety of T. circinata. **T. decal'vans,** porrigo decalvans; alopecia areata. **T. of the eye'lids,** see *Ophthalmia tarsi.* **T. facie'i,** porrigo larvalis. **T. favo'sa,** porrigo favosa; favus. **T. fico'sa,** porrigo scutulata. **T. furfura'cea,** porrigo furfurans; pityriasis; seborrhœa. **T. granula'ta,** porrigo scutulata; porrigo lupinosa. **T. lac'tea,** porrigo larvalis. **T. lupi'na** or **lupino'sa,** porrigo lupinosa. **T. muco'sa,** porrigo lupinosa. **T. porrigino'sa,** porrigo furfurans. **T. tar'si,** see *Ophthalmia tarsi* and *Blepharitis.* **T. ton'dens,** porrigo decalvans. **T. tonsu'rans,** porrigo decalvans. **T. trichophyti'na,** ringworm. Contagious eruption, of circular form, parasitic, being due to a fungus called the trichophyton. Known under its forms as T. barbæ, T. circinatus, T. tonsurans, etc. **T. un'guis,** a condition of the nail in which it appears to be eroded. **T. ve'ra,** porrigo favosa. **T. versic'olor,** brown eruption on the skin, chiefly of the trunk, variously called, as pityriasis versicolor, chloasma, etc.; due to a fungus.

Tineæ, tin'a-e (pl. of **Tinea**). Worms.

Tinesmus, tin-es'mus. Tenesmus.

Tingling, ting'gling (*tinnio,* to tinkle). A sharp, purring, or thrilling sensation, not always painful.

Tink'er's weed. Triosteum.

Tink'ling, metal'lic. Sound heard in cases of pneumothorax where communication with a large air-tube exists; resembles the striking of a distant small bell.

Tinna, tin'nah. See *Chloasma.*

Tinnimentum metallicum, tin-ne-men'tum met-al'lik-um (*tinnio,* to tinkle). Metallic tinkling. See *Tintement.*

Tinni'tus aur'ium (*tinnio,* to tinkle). Ringing of the ears; an imaginary sound, like the ringing of a bell, the noise of wind, the murmur of water, etc., heard in health and in sickness. It is often an accompaniment of cerebral disorder.

Tinospora cordifolia, tin-os'po-rah cor-de-fo'le-ah. Climbing shrub of India; tonic, antiperiodic, and diuretic.

Tintement métallique (F.), tant'mong ma-tal-leek'. *Metallic respiration, Metallic voice, Metallic tinkling.* A particular noise heard by the stethoscope when applied to the chest, and which, according to Laënnec, resembles that caused by striking glass, metal, or porcelain with a pin, but is, perhaps, more like the sound of a musical snuff-box. It is heard on causing the patient to speak or breathe, but is more distinct when he coughs; a pathognomonic symptom of a communication between the bronchia and cavity of the chest; in other words, pneumothorax.

Tintinnabulum, tin-tin-nab'u-lum (*tintinno,* to ring). A bell; uvula.

Tip'foot. See *Kyllosis.*

Tipsaria, tip-sah're-ah. Decoctum hordei.

Tirefond (F.), teer'fon (*tirer,* to draw, *fond,* bottom). A surgical instrument formerly used to elevate the piece of bone sawed off by the trephine or to extract foreign bodies located elsewhere.

Tires. Milk-sickness.

Tisane (F.), tis-an' (*ptisane,* pearl barley, or *ptisso,* to decorticate). *Ptisana* or *Ptissana, Ptisan.* An aqueous medicine, containing but little if any medicinal agent; particularly the decoction of barley.

Tisic, tiz'ik. Phthisis.

Tisical, tiz'ik-al. Phthisic.

Tissick, tiz'ik. See *Phthisic.*

Tissue, tish'yu. The various parts which, by their union, form the organs, and are, as it were, their anatomical elements. Histological anatomy is the anatomy of the tissues. **T., acciden'tal** or **adventit'ious,** consists of every substance—foreign to the primitive organization of the economy, but yet organized and living—which may be developed in the interior or at the surface of organs. They have been divided into: 1. Those resembling others in the animal economy or analogous accidental tissues. 2. Those having nothing analogous in the body, and which are always the result of a morbid process—the heterologous or heteroclite accidental tissues. **T., ad'ipose,** tissue composed of fat-cells: a form of connective tissue. **T., an'imal,** animal tissue. **T., are'olar,** cellular tissue. **T., cartilag'inous,** see *Cartilage.* **T., cel'lular,** cellular tissue. **T., conjunc'tive,** cellular tissue. **T., connec'tive,** cellular tissue. **T., crib'riform,** cellular tissue. **T., fi'bro-cel'lular** or **fi'brous,** see *Fibrous.* **T., filamen'tous,** cellular tissue. **T., het'eroclite,** see *Homology* and *Tissue, accidental.* **T., heterol'ogous,** see *Homology* and *Tissue, accidental.* **T., heteromor'phous,** see *Homology.* **T., inod'ular,** accidental fibrous tissue developed in suppurating wounds, which is the principal agent in cicatrization. It is well seen in the cicatrix left after burns. **T., lam'inated,** cellular tissue. **T., ligamen'tous,** desmoid tissue. **T., mu'cous,** cellular tissue. **T., phanerog'enous,** see *Phanerogenous.* **T., phaneroph'orous,** see *Phanerogenous.* **T., po'rous,** cellular tissue. **T., retic'ulated,** cellular tissue. **T., scle'rous,** used collectively for the cartilaginous, osseous, and fibrous tissues. **T., tu'bular** or **vas'cular,** tissue arranged in form of tubes.

Tis'sue-forma'tion. Histogeny.

Tis'sue-ma'king. Histogenetic.

Tit (*tithe*). Nipple.

Tithene, tith-a'na (*tithe*, a nurse). Nurse.

Tithymalus cyparissias, tith-im'al-us sip-ar-is'seas (*tithumalos*). Euphorbia cyparissias. **T. lath'yris**, Euphorbia lathyris. **T. latifo'lius**, Euphorbia lathyris. **T. palus'tris**, Euphorbia palustris. **T. paral'ias**, Euphorbia paralias.

Titillamentum, tit-il-lam-en'tum. Gargarism.

Titillation, tit-il-la'shun (*titillo*, to tickle). Tickling.

Titthe, tit-tha (*titthe*, the nipple). Mamma; nipple.

Titthion, tit'the-on (*titthion*, dim. of *titthos*). Nipple.

Titthis, tit'this (*titthis*). Mamma; nipple.

Titthos, tit'thos (*titthos*). Mamma; nipple.

Titty, tit'te. Mamma; nipple.

Titubantia, tit-u-ban'she-ah. A staggering.

Titubation, tit-u-ba'shun (*titubo*, to stagger or totter). Fidgets; vacillation. Peculiar gait associated with lesion of the cerebellum, more staggering than that of locomotor ataxia, from which it is readily diagnosticated. **T. lin'guæ**, stuttering; stammering.

Tjettek. Upas tieuté.

Tmetica, tmet'ik-ah (*temno*, to cut). Medicines supposed to have the property of cutting thickened humors.

Toad'flax. Antirhinum linaria. **T., bas'tard**, Comandra umbellata.

To-and-fro sound. Friction sound, as in pleuritis, pericarditis, and peritonitis.

Toast'water. Made by pouring a quart of water over a half-slice of bread, allowing the mixture to stand for two hours, and decanting the fluid. A common drink in febrile affections.

Tobacco, to-bak'ko (*tabacos*, the Caribbean name for the pipe in which it was smoked). Nicotiana tabacum. **T. amauro'sis**, a form of amaurosis, with atrophy of the optic nerve, met with in those addicted to the excessive use of tobacco. **T. bush**, Hedyosmum nutans. **T., Eng'lish**, Nicotiana rustica. **T. heart**, disturbed innervation of that organ from excessive use of tobacco, giving rise to palpitation and sometimes producing hypertrophy. **T., In'dian**, Lobelia inflata. **T. poi'son**, Hyoscyamus niger. **T. root**, see *Valeriana*. **T., wild**, Lobelia inflata; Nicotiana rustica.

Tocarexia, to-car-eks'e-ah (*tokos*, birth, *arexis*, help). Obstetrics.

Tocetus, to'ka-tus (*toketos*, birth). Parturition.

Tocodomycodoritis maligna vaginalis, to-ko-do-mik-o-do-re'tis mal-ig'nah vaj-in-al'is (*tocus*, *mukos*, mucus, *dora*, skin, *itis*). Colpocace puerperarum.

Tocology, to-kol'o-je (*tocus*, *logos*, discourse). Obstetrics; a treatise on obstetrics.

Tocus, to'kus (*tokos*, birth). Parturition.

Toddalia aculeata, tod-dal'e-ah ak-u-la-at'ah. Native shrub of Asia. Root-bark used in India as remedy for remittent fever and as a tonic and stimulant.

Tod'dy. A name given by the English to liquors procured in India by wounding the spathæ of certain palms. The best is obtained from the Cocos nucifera. Called also neva, and by boiling yields a coarse kind of sugar called jaggery. Toddy is also the common name for a mixture of spirit and water sweetened, and usually spiced with nutmeg. **T. tree**, mamei.

Toe. Digitus pedis. **T. clo'nus**, arhythmical contractions of the big toe from sudden passive extension of the first phalanx, in increased tension of the foot, flexion being produced by contraction of the abductor and flexor brevis pollicis muscles. **T., ham'mer**, see *Hammer*. **T., Mor'ton's pain'ful**, see *Morton*. **T., supernu'merary**, see *Monster*.

Tofus, to'fus. Tophus.

Toil'et of the peritone'um. Cleansing and readjustment of internal parts after abdominal section.

Tokas, to'kas (*tokas*). Puerpera.

Tok'elan ring'worm. Tinea imbricata.

To'ken, plague. See *Plague*.

Tokodynamometer, to-ko-di-nam-om'e-tur (*tokos*, birth, *dunamis*, power, *metron*, measure). An instrument for measuring the force of uterine contractions.

Tokology, to-kol'o-je (*tokos*, birth, *logos*, discourse). Obstetrics.

Tola, to'lah. Tonsil.

Tolene, to-leen'. Colorless volatile oil obtained by distillation of balsam of Tolu.

Tolerance, tol'er-ance (*tolero*, to bear). The power of bearing or resisting. The power of bearing large doses of certain potent remedies. The individual is said to be *tolerant*. See *Controstimulus*.

Toles (to'laze), **Tolium** (to'le-um), **Tolles** (tol'laze), or **Tollum**, tol'lum. Tonsil.

Tolu, to-lu' (from Tolu in South America). See *Toluifera balsamum*.

Toluene, tol-u-een'. Oily, colorless liquid obtained from coal-tar and in the dry distillation of certain organic substances. It is also called toluol, methylbenzene, and phenyl-methane.

Toluifera balsamum, to-lu-if'er-ah bal'sam-um (*Tolu*, *fero*, to bear). Ord. Leguminosæ. The tree which affords the tolu, balsam of Tolu, balsamum Tolutanum (Ph. U. S.), *Red balsam of Peru*. It has a very fragrant odor and warm, sweetish taste; is thick and of a reddish-yellow color. It is a stimulant and expectorant, and is used in coughs as a vehicle and as a dressing in surgery.

Toluol, tol'u-ol. Toluene.

Tolutanum, tol-u-tan'um. See *Toluifera balsamum*.

Tol'ysal. *Paratolydimethyl-pyrazolone salicylate*. Antirheumatic, antineuralgic, and antithermic.

Tom toe. Pollex. See *Digitus pedis*.

Tomacinum (to-mas'in-um), **Tomaclum** (to'maklum), or **Tomaculum**, to-mak'u-lum (*tome*, cutting up). A kind of sausage made of mixed meat and spices.

Tomata, to-mah'tah (Indian). Solanum lycopersicum.

Tomato, to-mah'to. Solanum lycopersicum.

Tome (*tome*, incision). A common suffix, as in litho*tome*. Cut, incision, etc.

Tomeion, to-my'on (*tome*). Knife.

Tomentum cerebri, to-men'tum cer'eb-re (*tomentum*, a flock of wool). The plexus of small vessels which pass between the pia mater and convolutions of the brain.

Tomes's fi'brils. Processes from odontoblasts occupying the dentinal tubules.

Tomeus, to'me-us (*tomeus*). Knife.

Tomis, to'mis (*tomis*). Surgeon's forceps; scissors.

Tomomania, to-mo-man'e-ah (*tome*, incision, *mania*). The intense desire to operate exhibited by some surgeons.

Tomotocia, to-mo-to'se-ah (*tome*, section, *tokos*, parturition). Cæsarean section.

To'my. Suffix denoting incision, cut, or operation, as litho*tomy*.

Tone (*tonoo*, to brace or give vigor). State of tension or firmness proper to each organic tissue. It is the effect of tonicity. See *Elasticity*. Also character of sound.

Tonga, ton'gah. See *Datura sanguinea*.

Tongine, ton'jeen. Volatile alkaloid contained in tonga.

Tongue. A muscular, symmetrical, and very mobile organ situate in the mouth from the os hyoides and epiglottis to the incisor teeth. Its particular use is to procure the sensation of savors, and it aids in the acts of sucking, mastication, deglutition, pronunciation, and exspuition. The upper surface, called the dorsum, is free, flat, and divided into two portions by a median furrow, linea mediana, at the posterior extremity of which is the foramen cæcum or foramen of Morgagni. The inferior surface is free, and covered by the mucous membrane on its anterior third and sides; but behind and in the middle it is attached to the lower jaw by means of the genioglossus, and to the hyoides by the hyoglossus. Its tip, or point, or dental extremity is rounded and free; the root, base, or hyoid extremity, radix linguæ, is continuous with the epiglottis and velum palati. The tongue is composed of muscles, and covered by a mucous membrane which forms the frænum of the tongue. On this membrane are seen the dif-

ferent papillæ. The nerves of the organ proceed from the inferior maxillary, glossopharyngeal, and hypoglossal. The arteries are the lingual, from the external carotid, and the palatine and tonsillar, from the labial. The veins are the superficial lingual, ranine lingual, and submental. They open into those of the pharynx and larynx. Its lymphatic vessels pass into numerous ganglia situate at the edge of the hyoglossi muscles. Two glands beneath the tongue, immediately behind the frænum, have received the name glands of Blaudin, after that anatomist; see *Sublingual gland*. **T., black,** a fever which prevailed in the Western States in the winter of 1842-43; probably typhoid fever. According to some, an epidemic erysipelas. **T., her'nia of the,** glossocele. **T., inflamma'tion of the,** glossitis. **T., red, fe'ver,** see *Typhus*.

Tongue-depres'sor. An instrument, consisting of a spatula attached to a handle, for depressing the tongue in examinations of the mouth.

Tongue-tie. See *Ankyloglossia*.

Tonic, ton'ik (*tonikos*). Relating to tone. In therapeutics, a medicine which has the power of exciting slowly and by insensible degrees the organic actions of the different systems of the animal economy, and of augmenting their strength in a durable manner. Bitter vegetable substances which are not associated with an acrid or narcotic principle, preparations of iron, etc., act as tonics. **T. pow'er,** irritability. **T. spasm,** a rigid contraction of muscles without relaxation; persistent and equable contraction of muscles, as in trismus, tetanus, etc. See *Tetanus* and *Spasm*.

Tonicity, to-nis'it-e. The faculty that determines the general tone of the solids. Excessive tonicity causes erethism or crispness; deficient tonicity, atony or weakness. Irritability.

Ton'ka bean. Dipterix odorata.

Tonodes, to-no'dees. Tensive.

Tonometer, to-nom'e-tur (*tonos,* tension, *metron,* measure). Instrument for measuring the degree of resistance to pressure, as in estimating the tension of the eyeballs, pressure exerted by organs, etc. Also an instrument for measuring rapidity of vibrations of sounding bodies.

Tonometry, to-nom'e-tre (same etymon). Measurement of tension, as of the eyeball. See *Tonometer*.

Tonopsychago'gia (*tonos,* tone, *agagos,* leading). Act of giving proper tone or vigor to the mind.

Tonoticus, to-not'ik-us (*tonos,* tension). Tonic.

Ton'quin bean. Tonka bean; **T. musk**; Chinese or Thibet musk.

Ton'sil. *Almonds of the ear, Almonds* or *Bulbs of the throat.* An ovoid collection of follicles about half an inch in length, similar in shape to an almond, and situate on each side between the pillars of the velum palati. The inner surface, projecting into the isthmus of the throat, is covered by the mucous membrane, in which are the orifices of a dozen crypts, whence a transparent viscid mucus oozes on pressure. This mucus is destined to facilitate deglutition by lubricating the isthmus faucium, and is forced out during the passage of the alimentary bolus. **T. of cerebel'lum,** see *Amygdala*. **T., pharynge'al,** mass of lymphoid tissue across the back part of the cavity of the pharynx, between the two Eustachian tubes.

Tonsilla, ton-sil'lah. Tonsil.

Tonsillæ pestilentes, ton-sil'le pes-til-en'tees. Cynanche maligna.

Tonsillar, ton'sil-lar. Appertaining or relating to the tonsils. **T. ar'tery,** branch of facial artery to the tonsil.

Tonsillarum gangræna, ton-sil-lah'rum gan-gre'-nah. Cynanche maligna.

Tonsillia, ton-sil'le-ah. Cynanche tonsillaris.

Tonsillitic, ton-sil-lit'ik (better *tonsillar*). Belonging or relating to the tonsils, as the tonsillitic branches of the glossopharyngeal nerve. Tonsillitic refers rather to tonsillitis, or inflammation of the tonsil.

Tonsilli'tis. Cynanche tonsillaris.

Tonsillotome, ton'sil-o-tome (*tonsilla, tome,* incision). Instrument for ablation of the tonsils. Amygdalotome.

Tonsorius culter, ton-so're-us kul'ter (*tonsor,* a barber, *culter,* a knife). Razor.

Tonus, to'nus. Tone. Tonic spasm; tonicity. **T. tris'mus,** trismus.

Toot. Coriaria ruscifolia.

Tooth. The teeth are small hard bodies fixed in the alveoli of each jaw, and serving to seize, cut, tear, and triturate alimentary substances. True teeth are found only in man, the mammalia, reptiles, and fish. The teeth have, in general, the shape of an irregular cone, the base of which is toward the interior of the mouth, and the apex, single or divided, toward the bottom of the alveoli. Each tooth has a part situate out of the alveolus and covered by a vitriform substance. This part is called the crown or corona; it is bounded by a narrower portion called the cervix, which separates it from the portion in the alveolus—the fang or root, odontorrhiza. In the adult the teeth are 32 in number, 16 to each jaw; these consist of 4 incisors, 2 canines, 4 bicuspids, and 6 molars. (See these various terms; also *Dentition.*) The teeth enclose a vascular and nervous pulp in a central cavity (cavitas pulpæ, cavum dentis, antrum dentale). They are formed of a very hard, compact tissue, and the corona is covered by a vitreous substance called enamel (substantia vitrea or adamantina). The enamel organ—organon adamantinum—is a peculiar structure formed in the development of the teeth by the growth and multiplication of epithelial cells dipping down into the mucous tissue. With a papilliform process developed in the same tissue the rudiment of the tooth is formed. The ivory of the tooth, dentine or dentin (ebur, substantia eburnea, substantia ossea of Malpighi, proper tooth-substance, bone of the tooth, osseous substance of tooth, tooth-bone), consists of tubular fibres—dentinal fibres—which contain organic deposits of calcareous salts and of intertubular substance, in which are observed corpuscles or osseous cells of the tooth, called calcigerous cells, which also contain earthy salts. At the part where the enamel terminates, at the cervix of the tooth, the crusta petrosa or fibrosa (cortex osseus, cæmentum, cementum, or cortical substance) commences in an extremely thin stratum in a thin layer of true bone, slightly modified in structure; passes down and gradually increases in thickness toward the extremity of the root, where it is generally the thickest. The name substantia ostoidea has been applied to it, as also materia tartarea. It has been found, however, that the hard substance deposited on the inner surface of the dentine at the age of twenty years or later, and which encroaches on the cavity, has a distinct structure from the cement, and resembles in part dentine and in part bone. It is the horny substance of Blumenbach, osteodentine of Owen, and secondary dentine of Tomes. In the compound teeth of herbivorous animals a deposition is found on the surface of the enamel, called cementum. The dental glands of Serres are small white bodies seen, anterior to the eruption of the teeth, studding the mucous membrane. They are caused by the prominences of the outer epithelial layer of the enamel organ. **T. bone,** see *Tooth*. **T., denu'ding pro'cess of,** gradual removal of the enamel without evidence of disease; most common in old persons. **T. edge,** great sensibility of the teeth, especially to acid or acerb substances. **T. germ,** ingrowth of epithelium and connective tissue that later forms the complete tooth. **T. paste,** dentifrice. **T. pulp,** vascular tissue around which dentine is formed in development of tooth. **T. rake,** instrument for scaling the teeth. **T. rash,** strophulus. **T. sac,** connective-tissue covering of tooth-germ and enamel-organ during development of tooth. **T. shell, dog-like,** see *Dentalium*. **T. wort,** Anthemis pyrethrum; Plumbago Europæa. **T. wounds,** wounds inflicted by the teeth of animals, and which do not owe their gravity to any poison conveyed into the tissues. They are punctured, penetrating, or lacerated, and often serious in result.

Tooth'ache. Odontalgia. **T. bush,** Xanthoxylum fraxineum. **T. tree,** Aralia spinosa, Xanthoxylum clava Herculis.

Topæsthesia, top-ees-the'ze-ah (*topos,* place, *aisthesis,* sensation). Tactile sense of localization.

Topha'ceous. Relating or belonging to tophus. **T. concre'tion,** tophus.

Tophi, to'fe. See *Tophus.*

Tophus, to'fus (*tophos,* a loose species of stone; a porous or friable stone). *Tophaceous concretion.* A collection of hard, calcareous matter, which forms particularly at the surface of joints affected with gout, *Arthrotophus* (see *Calculi, arthritic*), and occasionally in the interior of organs, around the teeth, etc. It likewise means gravel and chalaza.

Tophyperidrosis, top-hip-er-id-ro'sis (*topos,* a place, *huper,* above, *hidros,* sweat). Local hypersecretion of sweat.

Top'ic (*topos,* a place). Local; a local application. See *Local.*

Topical, top'ik-al. Local; applied to a particular part.

Topicus, top'ik-us (*topikos*). Local; topic.

Topinard's (to'pin-ar's) **angle.** Facial angle. **T.'s pro'file line,** line drawn from point between superciliary ridges to most prominent point of the lower part of the face.

Topinaria, to-pin-a're-ah. Talpa.

Topograph'ical (*topos,* a place or region, *grapho,* to describe). Description of a particular locality. **T. anat'omy,** see *Anatomy.*

Toponarcosis, to-po-nar-ko'sis (*topos,* place, *narkosis,* benumbing). Local anæsthesia.

Toponeurosis, to-po-nu-ro'sis (*topos,* place, *neuron,* nerve, *osis,* state of being). Local neurosis.

Toponymy, to-pon'im-e (*topos,* place, *onoma,* name). Description of place or direction.

Torcular, tor'ku-lar (*torqueo,* to twist). Tourniquet. A press for wine, oil, or cider. **T. Heroph'ili,** *Press of Herophilus, Fourth sinus, Confluence of the sinuses.* A smooth and polished cavity, of irregular shape, in which several sinuses of the dura mater meet; situate before the internal occipital protuberance at the union of the three great duplicatures of the dura mater. It has six openings into it: one above, that of the superior longitudinal sinus; two below, answering to the occipital sinuses; one anterior, belonging to the straight sinus; and two lateral and very broad, which lead into the lateral sinus, and convey from the cavity the blood that has been poured into it by the others.

Torculum, tor'ku-lum (*torqueo,* to twist). Tourniquet.

Tordyl'ium officina'le. *Tordylum.* Seeds and roots of this Southern European plant are considered carminative and diuretic. They enter into the composition of the theriaca.

Torenia Asiatica, to-ra'ne-ah as-e-at'ik-ah (after Olaf Toren of Gothenburg, a pupil of Linnæus). Small Malabar plant, the juice of whose leaves, sweetened with sugar, is said to cure gonorrhœa.

Tor'ic. Periscopic.

Tormentil, tor'men-til. Geranium maculatum; tormentilla.

Tormentilla, tor-men-til'lah (*tormina,* for which it was used). *Common tormentil, Upright septfoil.* Ord. Rosaceæ. The root, *Tormentilla,* has a slightly aromatic odor and styptic taste; it is astringent. **T. erec'ta** or **officina'lis** or **sylves'tris** or **tubero'sa,** the various species of tormentil employed in medicine.

Tormentum, tor-men'tum (*torqueo,* to twist). Pain, suffering; ileus; intussusception.

Tormina, tor'min-ah (pl. of **Tormen,** gripes) (*torqueo,* to twist). Acute colicky pains. Dysentery. **T. Cel'si,** dysentery. **T. parturien'tium,** pains, labor. **T. post-par'tum,** see *Pains, labor.*

Torminal, tor'min-al. Relating to tormina.

Tornac'ulum (*torqueo,* to twist). Tourniquet.

Tornwaldt's disease. Hypersecretion from gland of Luschka at vault of pharynx.

Torosity, to-ros'it-e (*torosus,* brawny). Muscular strength.

Torosus, to-ro'sus. Muscular.

Torpedo, tor-pe'do (*torpeo,* to be torpid). Narcosis.

Torpefactio universalis, tor-pe-fak'she-o u-ne-ver-sal'is (*torpeo,* to be torpid, *facio,* to make). Torpidity of the whole body.

Tor'pid (*torpeo,* to be sluggish). Numb. Incapable of exertion and of feeling. Dull; stupid; inactive.

Torpid'itas. Torpidity; torpor.

Torpidity, tor-pid'it-e. Torpor.

Torpidus, tor'pid-us. Narcotized; torpid.

Tor'por. *Torpidity.* State of a part which becomes numb and almost incapable of motion. Torpor, torpidity, torpidness, torpitude, are also applied to a debilitated, sluggish condition of a part or of the whole of the body; narcosis. See *Hibernation.* **T. of the co'lon,** see *Colon.* **T. intestino'rum,** constipation. **T. soporif'icus,** lethargic torpor.

Torrefication, tor-re-fik-a'shun (*torreo,* to parch). Application of a high degree of heat, but not sufficient to produce carbonization.

Torsion, tor'shun (*torqueo, tortum,* to twist). The act of twisting. Torsion of the extremities of bleeding vessels is sometimes used to arrest hemorrhage. Also rotation of the eyeball upon the line of sight as an axis.

Torticol'is. Torticollis.

Torticollis, tor-te-col'lis (*torqueo, tortum,* to twist, *collum,* neck). *Stiffneck, Wryneck.* A variety of rheumatism, seated in the muscles of the neck, which prevents the motion of the head and causes the patient to hold it inclined to the side affected. It is commonly of short duration, usually disappearing in a few days. Also permanent contraction of the muscles of the neck, *T. spastica,* which causes the head to be held to one side. The remedy is the division of the contracted muscles.

Tortosa (tor-to'sa) **lic'orice.** Variety of Spanish licorice.

Tortu'ra o'ris (*torqueo,* to twist). Canine laugh; neuralgia faciei. **T. o'ris paralyt'ica Linnæ'i,** paralysis, Bell's.

Tor'ula cerevis'iæ (*torus,* a knot). *T. aceti, Yeast plant.* One of the simplest forms of vegetation, capable, under favorable circumstances, of vegetating rapidly, and assisting in producing the fermentation of saccharine substances. This plant has been found in vomited fluids and in fæces. See *Parasites.*

Toruloid, tor'u-loid. Resembling yeast.

Tor'ulus glan'dis (dim. of **Torus,** a fleshy part). Crown of the glans penis.

To'rus (a fleshy part). Muscle; a bulging. **T. fronta'lis,** prominence of forehead over the frontal sinuses. **T. ma'nûs,** metacarpus. **T. occipita'lis,** prominence at times present on upper portion of the occipital bone. **T. palati'nus,** prominence at times seen on hard palate at junction of intermaxillary and palatomaxillary sutures. **T. spira'lis,** stria acustica. **T. u'teri,** thick fold at point of reflection of uterine and vaginal peritoneum.

Tota bona, to'tah bo'nah (all good). Chenopodium bonus Henricus.

Totsu kaso, tot'su kah'so. Sphæria Sinensis.

Totty, tot'te. Vertiginous.

To'tum carno'sum (all fleshy). Pancreas.

Touch. *Taction, Palpation.* One of the five senses, which makes known to us the palpable qualities of bodies. It is seated particularly in the hands, and differs from tact in being active. See *Esaphe* and *Palpation.* Also examination by means of the sense of feeling. *To touch* the mouth with mercury is to produce the constitutional effects of that agent, as evinced by the falling away of the gums, etc. **T., abdom'inal,** touch applied to the abdomen to determine the existence of pregnancy. **T. bod'ies,** corpuscula tactûs. **T. cor'puscles,** corpuscula tactûs. **T., rec'tal,** examination by the introduction of the finger into the rectum. **T., roy'al,** it was at one time believed in England that the royal touch would remove scrofula or king's evil (as it was thence called). Edward the Confessor was the first English king who *touched* for the evil. Medals of gold or silver were often suspended around the necks of the persons touched. These were called *touching* or *healing pieces.*

T., vagi'nal, examination by the finger or fingers introduced into the vagina. **T., ves'ical,** examination of the bladder by a finger introduced into the urethra. **T. wood,** Boletus igniarius.

Touch'ing piece. See *Touch, royal.*

Touch-me-not. Impatiens fulva. See *Noli-me-tangere.*

Touch'wood. Boletus igniarius.

Toulema, tu-la'mah. Canna starch.

Touloucounin, tu-lu-ku'nin. See *Carapa touloucouna.*

Tour de maître (master turn). Term adopted from the French to indicate the wide sweep made by the end of a sound or catheter in introducing it into the urethra or uterine canal.

Tourniquet, toor'ne-ket or tur'ne-ket ([F.] *tourner,* to turn). A surgical instrument for stopping the course of blood in a limb by exerting a strong compression upon the principal artery. It was invented by a French surgeon, Morel, in the middle of the 17th century, and was modified subsequently. It is used to suspend, for a time, the circulation in a limb during great operations, to arrest arterial hemorrhage in cases of wounds, to compress certain aneurismal and other tumors, etc. Handkerchiefs and bandages have been extemporized for use in such cases when the tourniquet was not available. **T., Es'march's,** see *Esmarch.*

Tous-les-mois (every month) (F.). *Canna* (Ph. U. S.). *Canna starch.* A fecula obtained from the rhizome of Canna edulis. It resembles potato starch, and may be substituted for arrow root. It is procured from St. Kitts.

Tow. Used in surgical dressings.

Town cachex'ia. The general cachectic condition of pallor and anæmia met with in densely-populated towns.

Toxæmia, toks-e'me-ah. Toxicohæmia.

Toxæmic, toks-e'mik. *Toxicohæmic, Toxicæmic, Hæmatoxic, Hæmatotoxic, Hæmotoxic.* Relating or appertaining to a poisoned state of the blood.

Toxalbu'mins. Bacterial proteids.

Toxanæmia, toks-an-e'me-ah. Anæmia produced by toxicohæmia.

Toxhæmia, toks-he'me-ah. Toxicohæmia.

Toxic, toks'ik. Poisonous.

Toxicæmia, toks-ik-e'me-ah. Toxicohæmia.

Toxical, toks'ik-al. Poisonous.

Toxicaria Macassariensis, toks-ik-ah're-ah mak-as-sar-e-en'sis. See *Upas.*

Toxicoden'dric acid. Volatile acid in fresh leaves of Rhus toxicodendron and other species of Rhus.

Toxicoden'dron (*toxicum, dendron,* tree). Rhus toxicodendron.

Toxicoderma, toks-ik-o-dur'mah (*toxicum, derma,* skin). Toxicodermatitis.

Toxicodermatitis, toks-ik-o-dur-mat-e'tis (*toxicum, derma,* skin, *itis,* inflammation). Inflammation of the skin due to action of poisons.

Toxicohæ'mia (*toxicum, haima,* blood). *Toxicæmia, Toxæmia, Toxhæmia.* Poisoning of the blood.

Toxicoid, toks'e-koid (*toxicum, eidos,* resemblance). Resembling poison.

Toxicological, toks-ik-o-loj'ik-al. Relating to toxicology.

Toxicologist, toks-ik-ol'o-jist. A specialist in toxicology.

Toxicology, toks-ik-ol'o-je (*toxicum, logos,* description). A treatise on poison.

Toxicoses, toks-ik-o'zees (*toxicon,* arrow, orginally arrow-poison). A family of diseases caused by the introduction of poisons into the system.

Toxicum, toks'ik-um (*toxon,* arrow). Poison; venom.

Toxiferous, toks-if'er-us (*toxon,* arrow (poison), *fero,* to bear). Carrying poison.

Toxihæmia, toks-e-he'me-ah. Toxicohæmia.

Toxin, toks'in. Poisonous basic substance obtained from culture of tetanus bacillus. See *Tetanus.*

Toxines, toks'eens. Poisonous putrefactive alkaloids. See *Ptomaïnes.*

Toxiphobia, toks-e-fo'be-ah. Morbid fear of being poisoned.

Toxiresin, tox-e-rez'in. Cardiac poison produced by action of acids upon digitoxin.

Toxomu'cin. Substance extracted from tubercle bacilli by Weyl, by means of a solution of caustic soda, producing, when injected in mice and guinea-pigs, cutaneous necrosis, but not yet established as a separate identity.

Toyn'bee's exper'iment. Rarefaction of the air of the middle ear produced by the act of swallowing with closed mouth and nares.

Trabeculæ, trab-ek'u-le (dim. of **Trabs,** a beam). Prolongations of fibrous membranes which form septa, as in the corpora cavernosa and the testes; medullary fibres which form the commissures; fleshy projections which form the columnæ carneæ, etc. **T. car'neæ,** columnæ carneæ. **T. cer'ebri,** corpus callosum. **T. cor'dis,** columnæ carneæ. **T. cor'porum cavernoso'rum,** see *Cavernous bodies.* **T. sple'nis,** see *Spleen.* **T. Willis'ii,** chordæ Willisii.

Trabeculated, tra-bek'u-la-ted. Having trabeculæ.

Tra'bes cor'dis (pl. of **Trabs,** a beam). Columnæ carneæ.

Trabs (a beam). Penis. **T. cer'ebri,** corpus callosum. **T. medulla'ris,** corpus callosum.

Trace, prim'itive. Groove, primitive.

Trachea, trak-a'ah; commonly, however, pronounced trak'e-ah (*trachus,* rough, *arteria,* artery, understood). *Windpipe.* A cylindrical, fibrocartilaginous, and membranous tube, flattened behind, and situate on the median line before the vertebral column, from the inferior part of the larynx as far as the third dorsal vertebra. There it divides into two branches—the bronchiæ—which separate, one to go to each lung. The trachea, the function of which is to convey air to the lungs during respiration, is composed—1, of cartilaginous rings (annuli cartilaginei, segmenta cartilaginea, orbes cartilaginosi), incomplete behind, situate one above the other, and kept in situ by a fibrous membrane; 2, of a mucous membrane, which lines it internally and contains numerous mucous follicles; 3, of transverse muscular fibres, not well marked, which occupy its posterior surface; 4, of vessels which proceed from the superior and inferior thyroideal; 5, of nerves given off by the pneumogastric and cervical ganglia. The breathing-tubes of insects are termed tracheæ. **T. arte'ria,** trachea.

Trache'æ. See *Trachea.*

Tracheaëctasy, trak-e-ah-ek'tas-e (*trachea, ektasis,* a stretching). Dilatation of the trachea.

Tracheal, trak-e'al (commonly pron. trak'e-al). Appertaining to the trachea; applied to respiration as heard through the stethoscope opposite the trachea, larynx, and root of the bronchia, the air appearing as if sucked in from the cylinder during inspiration and expelled during expiration. **T. ar'teries,** branches of inferior thyroid artery supplying the trachea. **T. glands,** mucous follicles on the posterior surface of the trachea. **T. nerves,** branches of recurrent laryngeal nerves to the trachea. **T. plex'us,** continuation of the thyroid plexus of veins lying in front of the trachea. **T. tug'ging,** downward displacement of larynx produced by pressure of aneurism of transverse portion of arch of aorta, occurring with each systole.

Trachealia, trak-e-al'e-ah (*trachea*). Cynanche trachealis.

Trachealis, trak-e-al'is. The fibres of unstriped muscle passing from one portion of each of the tracheal cartilages to the other at the posterior part of the trachea. When they contract they approximate the extremities of the cartilage, diminish the calibre of the trachea, and thus increase the velocity of the air forced through it, as in coughing, and facilitate the removal of any irritating substances in contact with the lining membrane.

Tracheitis, trak-e-e'tis (*trachea, itis*). Cynanche trachealis.

Trachelagra, trak-a'lag-rah (*trachelos,* neck, *agra,* seizure). Torticollis; also gout in the neck.

Trachelian, trak-e'le-an (*trachelos,* neck). Cervical.

Trachelias'mus. Trachelismus.

Trachelismus, trak-el-iz'mus (*trachelus*). Spasmodic action of the muscles of the neck, causing compression of the veins of the neck and an impeded return of blood from the head.

Trachelitis, trak-el-e'tis. Cynanche trachealis.

Trachelium Americanum, tra-ke'le-um am-er-e-kan'um (*trachelus,* having been used in throat affections). Lobelia cardinalis.

Tracheloclavicularis imus, trak-a-lo-klav-ik-u-lah'ris e'mus. Muscular slips at times found in man, running from the clavicle to the occipital bone; undeveloped in lower animals.

Trachelocostoscapularis, trak-a-lo-kos-to-skap-u-lah'ris. Serratus magnus and levator anguli scapulæ.

Trachelocyllosis, trak-a-lo-sil-lo'sis (*trachelus, kullosis,* laming). Deformity of the neck.

Trachelocyrtosis, trak-a-lo-sur-to'sis (*trachelus, kurtosis,* arching). Deformity of the neck.

Trachelodiaphragmatic, trak-a-lo-di-a-frag-mat'ik. The fourth pair of cervical nerves, whence the phrenic nerve chiefly arises.

Trachelodynia, trak-a-lo-din'e-ah (*trachelus, odune,* pain). Pain in the neck.

Trachelomas'toid. Complexus minor.

Trachelomyitis, trak-a-lo-me-e'tis. Inflammation of muscles of neck.

Trachelo-occipitalis, trak-a'lo-ok-sip-it-al'is. Complexus.

Tracheloplasty, trak-a'lo-plas-te (*trachelus, plasso,* to shape). Operation for restoration of lacerated cervix uteri.

Trachelorrhaphy, trak-el-or'rhaf-e (*trachelus, rhaphe,* seam). Operation for closure of laceration of cervix uteri by paring the edges and suturing. The procedure is generally known as Emmet's operation.

Trachelotomy, trak-el-ot'o-me (*trachelus, temno,* to cut). Amputation of cervix uteri.

Trachelus, trak-a'lus (*trachelos*). Neck; trachea.

Tracheo-aërocele, trak'a-o-a-er-o-se'le (Eng. trak'e-o-a-air'o-seel). Air-containing tumor within the trachea; hernia of the trachea.

Tracheobronchitis, trak-a-o-bron-ke'tis. Inflammation of the trachea and bronchia.

Tracheocele, trak-a-o-se'le (Eng. trak'e-o-seel) (*trachea, kele,* a tumor). Bronchocele.

Tracheo-œsophageus, trak-a'o-e-sof-aj-a'us. Muscular fibres from œsophagus to trachea.

Tracheopharyngeus, trak-a-o-fah-rin-ja'us. Fibres of inferior constrictor of pharynx inserted in trachea.

Tracheophony, trak-e-of'o-ne (*trachea, phone,* voice). Laryngophony.

Tracheophthisis, trak-a-o-te'sis. See *Phthisis laryngea.*

Tracheophyma, trak-a-o-fe'ma (*trachea, phuma,* a swelling). Bronchocele.

Tracheopyra, trak-a-op'ir-ah (*trachea, pur,* fever). Cynanche trachealis.

Tracheorrhagia, trak-a-or-rhaj'e-ah (*trachea, rhegnumi,* to break forth). Hemorrhage from the trachea.

Tracheoschisis, trak-a-os'kis-is (*trachea, schizo,* to split). Fissure of the trachea.

Tracheoscopy, trak-e-os'ko-pe (*trachea, skopeo,* to view). Inspection of the trachea by a mirror similar to that for examination of the larynx.

Tracheostenosis, trak-e-o-sten-o'sis (*trachea, stenosis,* contraction). Contraction or narrowness of the trachea.

Tracheotome, trak'e-o-tome (*trachea, tome,* incision). An instrument of the trocar kind for opening the trachea.

Tracheotomy, trak-e-ot'o-me. Incision of the trachea. See *Bronchotomy.*

Trachielcosis, trak-e-el-ko'sis (*trachea, helkosis,* ulceration). Ulceration of the trachea.

Trachielcus, trak-e-el'kus (*trachea, helkos,* an ulcer). Ulcer of the trachea.

Trachitis, trak-e'tis (*trachea, itis*). Inflammation of the trachea; cynanche trachealis.

Trachoma, trak-o'mah (*trachus,* rough). *Granular conjunctiva, Granular eyelid, Chronic granular conjunctivitis.* A roughness of the inner surface of the eyelids; a variety of ophthalmia of which three kinds have been designated: T. sabulosum, from sand, etc. getting between the eyelids; T. carunculosum, from fleshy excrescences; and T. herpeticum, from hard pustules on the inner surface of the eyelids. The disease is due to a specific micro-organism. **T. glands,** see *Bruch.*

Trachyphonia, trak-e-fo'ne-ah (*trachus,* rough, *phone,* voice). Roughness of the voice.

Traco'ma. See *Trachoma.*

Tract (*traho, tractum,* to draw out). A track or course; a region. **T., op'tic,** see *Optic nerves.* **T., res'piratory,** see *Respiratory tract.*

Tractatio manuaria, trak-tah'she-o man-u-ah're-ah (*tracto, tractatum,* to handle). Preparation, administration, and dispensing of medicines. Surgery.

Trac'tion. Act of drawing.

Tractor, trak'tor (*traho, tractum,* to draw). Lever.

Tractoration, trak-to-ra'shun (*traho, tractum,* to attract or influence). Perkinism. See *Tractors, metallic.*

Tracto'res (*tracto, tractatum,* to handle). See *Shampooing.*

Trac'tors, metal'lic. Metallic agents introduced by Dr. Elisha Perkins of Connecticut, to cure diseases. The affected parts being rubbed with these tractors, any good effects were doubtless owing to the influence exerted by the mind over the body. See *Perkinism.*

Tractus, trak'tus. Tract. **T. crucia'tus tegmen'ti,** posterior commissure of the brain. **T. ethmoïda'lis,** gyrus rectus. **T. intermediolatera'lis,** small group of cells forming a projection of gray matter of the spinal cord opposite the junction of the anterior and posterior cornua. **T. intestino'rum,** intestinal tube. **T. olfacto'rius,** olfactory tract. **T. op'ticus,** see *Optic nerves.* **T. parieta'lis ante'rior,** anterior central convolution. **T. parieta'lis me'dius,** posterior central convolution. **T. respirato'rius,** respiratory tract. **T. semicircula'ris,** fibres in cerebellum arching over the corpus dentatum to the peduncles. **T. spira'lis foraminulen'tus,** minute openings at the base of the modiolus, arranged in a spiral manner, transmitting filaments of the cochlear nerve. The central canal of the tractus is longer than the rest, and is called *Canalis* or *Tubulus centralis modioli* or *cochleæ.* Winding closely round the modiolus is a small canal—*Canalis spiralis modiolus.* **T. supracallo'sus infe'rior,** gyrus fornicatus. **T. supracallo'sus supe'rior,** marginal gyrus.

Tradescan'tia Virgin'ica. *Spiderwort;* indigenous. The roots are demulcent.

Tragacan'tha (*tragos,* goat, *acantha,* a thorn, owing to its hirsute boughs). *Gum tragacanth, Gum dragon.* The concrete juice or gummy exudation from Astragalus gummifer and other species of Astragalus (Ph. U. S.); ord. Leguminosæ. This gum is inodorous, nearly insipid, of a whitish color, semitransparent and striated, occurring in thin, vermiform pieces, and does not form smooth, uniform mucilage with water. It is demulcent, but is rarely used alone.

Tragacan'thin. Organic principle of tragacanth.

Tragea, traj'a-ah. Tragema. **T. aromat'ica,** pulvis cinnamomi compositus.

Tragema, traj'a-mah (*tragema,* sweetmeat). An aromatic powder containing much sugar.

Tragi (traj'e) **bar'bula.** See *Tragus.* **T. pi'li,** hairs of the ear.

Tragicus, traj'ik-us. Tragus. A small, flat, triangular muscle which almost wholly covers the outer surface of the tragus, arising from its base and terminating at the top of the eminence.

Tragomaschala (trag-o-mas'kal-ah) or **Tragomas'chale** (*tragos,* goat, *maschale,* arm-pit). Strong, unpleasant odor of the arm-pits.

Tragophonia, trag-o-fo'ne-ah (*tragos,* goat, *phone,* voice). Egophony.

Tragopo'gon (*tragos,* goat, *pogon,* beard). Genus of

plants, ord. Cichoraceæ, of which the roots of the *Tragopogon porrifolium, Salsifi, Salsify, Salsafy, Oyster-plant, Oyster-root, Vegetable oyster*, and the young shoots of the *T. pratense, Meadow salsifi, Common goat's beard*, are eaten as food. Root of the latter plant has been used as a diuretic.

Tragoselinum, trag-o-sel-e'num (*tragos*, goat, *selinon*, parsley). Pimpinella saxifraga. **T. angel'ica**, Ligusticum podagraria. **T. mag'num**, Pimpinella magna. **T. ma'jus**, Pimpinella magna. **T. saxif'raga**, pimpinella.

Tra'gus (*tragos*, a goat, from its being furnished, in some persons, with hair like the beard of a goat). Small, flattened, triangular nipple covered with hair in old people, situate before the meatus auditorius externus, which it appears to conceal. Also the peculiar goat-like smell of the axillæ. **T. Matthi'oli**, salsola kali.

Trail'ing arbu'tus. See *Epigæa repens.*

Train'ing (*traho*, to draw). System of treating man and animals so as to develop their full physical powers.

Trame (tram'a) or **Tramis**, tram'is. Perineum.

Trance. Catalepsy; ecstasis; hynoptic state. **T., death**, see *Asphyxia.*

Trans. In composition, through, across, over, or beyond.

Transduc'tor hallu'cis. Transversus pedis.

Transfer'ence (*trans, fero*, to bear). Telepathic interchange of thought between two persons widely separated. Also applied to clairvoyant and hypnotic phenomena. See *Thought-reading* and *Hypnotism.*

Transfiguratio, trans-fig-u-rah'she-o (*trans, figuro*, to form). Transformation.

Transfix'ion. Act of piercing, as in the formation of flaps in certain amputations.

Transforation, trans-for-a'shun (*trans, foro*, to pierce). Repeated perforation of the base of the fœtal skull in craniotomy.

Transforma'tion (*trans, forma*, form). Change of form.

Transfusion, trans-fu'zhun (*trans, fundo*, to pour). Pouring from one vessel to another. **T. of blood**, act of passing the blood of one animal into the veins of another. Arterial transfusion is the injection of defibrinated blood into an artery; immediate or direct when the blood is passed from one person to another through a tube; indirect or mediate when injected from a vessel into which it has been drawn. Used in conditions of collapse following severe hemorrhage.

Tran'sient blind'ness. Temporary amblyopia, said to be caused by vasomotor disturbances of the visual centre.

Transition (trans-ish'un) **tu'mor.** See *Tumor, transition.*

Transla'tion (*trans, fero*, to carry). Metastasis.

Translu'cid. Property of transmitting light, but not permitting objects to be distinctly seen.

Transmigration, trans-mi-gra'shun (*trans, migro*, to wander). Passage of cells through a limiting wall of membrane; especially applied to the escape of white corpuscles from blood-vessels in inflammation. **T. of the o'vum**, occasionally a corpus luteum is found in the ovary opposite to that in which the ovum was developed. Such a transition, whether occurring by an extra-uterine or an intra-uterine channel, is so called.

Transmissibility, trans-mis-sib-il'it-e (*trans, mitto*, to send). Sensibility.

Transmission, trans-mish'un. Passage of a disease or disease-producing agent from one person to another.

Transmutatio, trans-mu-tah'she-o (*trans, muto, mutatum*, to change). Transformation.

Transparent, trans-pa'rent (*trans, pareo*, to appear). Admitting passage of light, so that objects can be distinctly seen through intervening media.

Transpiration, trans-pir-a'shun (*trans, spiro*, to breathe). Cutaneous exhalation of vapor or volatile matter. Perspiration. **T. unilat'era**, perspiration of one-half the body.

Transplanta'tio (*trans, planto*, to plant). Pretended method of curing diseases, devised by Paracelsus, by making them pass from one individual to another, either animal or vegetable. Plastic surgery. **T. den'tis**, transplantation of a tooth; the act of transplanting a tooth from one person to another. **T. med'ica no'va**, transfusion.

Transplantation, trans-plan-ta'shun (*trans, planto*, to plant). See *Transplantatio.* Act of grafting living tissue upon the site of deformity or lesion for the purpose of repairing defect. **T. of the cor'nea**, substitution of the cornea of an animal for that of man in cases in which the cornea has been destroyed. **T. of the skin**, skin-grafting.

Trans'port (*trans, porto*, to carry). Delirium.

Transpositio, trans-po-zish'e-o (*trans, pono*, to place). Transposition. See *Metathesis.*

Transposition, trans-po-zish'un. Change of situation. Abnormal change in the location of an organ. Transfer of tissue from one point to another by plastic operation. **T. of the vis'cera**, congenital vice of conformation, consisting in the viscera being found out of the situations they ordinarily occupy; the heart, for example, being on the right side, the liver on the left, etc.

Trans'udate. See *Transudation.* Exhalation at the surface of the skin or of any membrane.

Transudation, trans-u-da'shun (*trans, sudo*, to sweat). Passage of a fluid through the tissue of any organ, which may collect in small drops on the opposite surface or evaporate from it. The material that so transudes is called a transudate. Exosmose.

Transuda'tum. See *Transudation.*

Transversa'lis. Transverse. **T. abdom'inis**, a muscle deeply seated on the lateral parts of the abdomen; flat, thin, and broader before than behind; attached above to the cartilage of the last true rib and to that of every false rib, and below to the inner lip of the crista of the ilium, to the two outer thirds of the crural arch, and to the upper part of the pubis. Its fibres are inserted behind by means of broad aponeuroses into the top of the transverse and spinous processes of the first four lumbar vertebræ; and, before, into the linea alba and the ensiform cartilage. This muscle, all of whose fibres have a transverse direction, constricts the belly and diminishes the base of the chest by drawing inward the ribs to which it is attached. **T. anti'cus pri'mus**, rectus capitis lateralis. **T. cervi'cis anti'cus**, probably an aberrant intertransversalis longus. **T. cervi'cis me'dius**, probably an aberrant intertransversalis longus. **T. cervi'cis posti'cus mi'nor**, an accessory muscle arising from transverse process of the upper dorsal or lower cervical vertebræ, inserted into transverse process of atlas or mastoid process. **T. collatera'lis col'li**, see *Sacrolumbalis.* **T. col'li**, a muscle attached to the transverse processes of the five or six lowest vertebræ of the neck, and to those of the four or five first dorsal. It extends the vertebræ of the neck and inclines them to its side. See *Semispinalis colli.* **T. dor'si**, a muscle, usually called multifidus spinæ, and including all the transversospinales, situate in the vertebral gutters extending from the posterior parts of the sacrum to the second cervical vertebra. It is thicker in the neck and loins than in the back and behind the sacrum. Its use is to straighten the vertebral column and to impress upon it a slight rotary motion. **T. facie'i**, see *Artery* and *Temporal.* **T. fas'cia**, f. lining the transversalis muscle, joining the diaphragmatic fascia above, attached below to the iliac crest and whole of Poupart's ligament, except the space where it passes into the thigh to form part of the crural sheath. **T. na'si**, compressor naris. **T. plan'tæ**, transversus pedis.

Transversa'rius. Transverse.

Trans'verse (*trans*, across, *verto*, to turn). That which runs across; also that which relates to the transverse processes of the vertebræ. **T. ar'tery of the face** arises from the temporal, passes transversely across the face in front of the condyle of the lower jaw, and gives its branches to the different muscles

of the cheek. **T. cer'ebral fis'sure, ante'rior,** a fissure of the brain bounded above by the corpus callosum and fornix, below by the corpora quadrigemina and lateral parts of the optic thalamus. **T. cer'ebral fis'sure, poste'rior,** is situate between the cerebellum above and medulla oblongata below. **T. cer'vical ar'tery** arises from the thyroid axis, passing across the neck through the subclavian triangle. **T. diam'eter of skull,** breadth of skull between parietal prominences. **T. fis'sure,** see *Liver*. **T. fos'sa,** see *Liver*. **T. lig'ament,** part of cotyloid ligament; coracoid ligament. **T. lig'ament of the at las,** annular ligament. **T. perine'al ar'tery** is given off from the upper branch of the internal pudic, and passes inward and forward above the transversus perinæi muscles as far as the bulb of the urethra, into which it dips, subdividing into numerous branches. **T. perine'al mus'cle,** transversus perinæi. **T. pro'cesses of the vertebræ,** *Diapophysis* of Owen, the bony eminences that jut out transversely and posteriorly from the sides of the vertebræ. **T. su'ture** runs across the face and sinks into the orbit, joining the bones of the skull to those of the face, but with so many irregularities and interruptions that it can scarcely be recognized as a suture.

Transversospi'nal. Semispinalis colli; semispinalis dorsi.

Transversospina'lis. Transversalis dorsi. **T. col'li,** semispinalis colli. **T. dor'si,** semispinalis dorsi.

Transver'sus. Transverse. **T. aur'is,** a muscular ligament dividing the concha into two portions. **T. col'li,** muscle arising from first costal cartilage and running toward middle line of neck. **T. lin'guæ,** intrinsic muscle of tongue. **T. ma'nûs,** external head of adductor pollicis. **T. pec'toris,** triangularis sterni. **T. pe'dis,** a muscle arising from the heads of the metatarsal bones of the three outer toes, and inserted into the base of the first phalanx of the greater toe, being blended with that of the adductor pollicis. **T. perinæ'i,** *Transverse perineal muscle,* muscle placed at the posterior part of the perineum. It is thin, triangular, and situate transversely. Its external extremity is attached to the ramus and tuberosity of the ischium; its inner extremity is confounded with its fellow of the opposite side, and with the anterior part of the sphincter ani and posterior part of the bulbocavernosus. Its function is to compress the urethra and to support the rectum and bladder. To a fasciculus of this muscle Santorini has given the name *Elevator* or *Ejaculator urethræ*. **T. perinæ'i al'ter,** a small muscle occasionally accompanying the last. **T. pros'tatæ,** compressor prostatæ.

Tra'pa na'tans. Plant affording the Nuces aquaticæ, Tribuli aquatici, caltrops. The nut is nutrient and demulcent, and used in diarrhœa from abrasion of the bowels, and in calculus. A poultice is sometimes made of it to discuss hard and indolent tumors.

Trapeza, trap-a'zah (*trapeza*, table). Corona of the jaw teeth.

Trape'zium (*trapezion*, trapezium) **cer'ebri.** A set of nerve-fibres situate in the pons Varolii. **T. os,** so called from its shape. The first bone of the second row of the carpus. Articulated above with the scaphoides; below, with the first bone of the metacarpus; within, with the trapezoides and second metacarpal bone.

Trape'zius. A muscle seated at the posterior part of the neck and shoulder and at the upper part of the back, having the shape of a trapezium; attached, on the one hand, to the inner third of the upper curved line of the occipital bone; to the posterior cervical ligament; to the spinous processes of the seventh cervical vertebra and of all the dorsal vertebræ; and, on the other hand, to the spine of the scapula, the acromion, and the outer third of the posterior margin of the clavicle. Its upper fibres are situate obliquely downward and outward; the transverse and inferior, obliquely outward and inward. This muscle elevates the shoulder, carries it backward, or depresses it, according as its upper, middle, or lower fibres contract separately. It straightens the head also, and inclines it to one side.

Trap'ezoid (*trapezion*, trapezium, *eidos*, form). Trapezium-shaped. **T. bone,** second bone of the second row of the carpus, so called from its shape. It is smaller than the trapezium, on the inside of which it is situate. It is articulated, above, with the os navicularе; below, with the second metacarpal bone; on the outside, with the trapezium; and internally, with the magnum. Anteriorly and posteriorly, it affords attachment to ligaments. **T. lig'ament,** the anterior part of the coracoclavicular ligament, having the shape of a trapezium, situate obliquely between the acromion process and clavicle.

Trapp's test. For veratria; filter a solution containing the suspected substance, heat with hydrochloric acid, and if veratria is present a dark-red color appears.

Traube's curves. Rhythmical variations of arterial pressure occurring in animals which have been subjected to the action of curare, after total cessation of respiratory movements and section of both vagi.

Traulismus, trow-liz'mus (*traulismos*, lisping). Vicious and incomplete pronunciation in which almost all the consonants are replaced by the letters *b* and *l*.

Traulotes, trow-lo'tees (*traulotes*, lisping). Traulismus.

Trauma, trow'mah (*trauma*, wound). A wound.

Traumat'ic (*trauma*, a wound). *Vulnerary*. Anything relating to a wound or injury, as traumatic affections of the skin. **T. fe'ver,** febrile phenomena following a wound.

Traumat'ica. Detergents; vulneraries.

Traumaticine, trow-mat'is-seen. Solution of guttapercha in chloroform which acts as a protective when applied to the skin.

Trau'matism. The condition of the organism occasioned by a grave wound. Traumatism of labor includes lesions arising in the course of parturition, as laceration of the os and vagina, etc.

Traumatocace, trow-mat-ok'as-e (*trauma*, wound, *kake*, foulness). Traumatic gangrene.

Traumatocomi'um (*trauma, komeo*, to take care of). Hospital for the reception of the wounded.

Traumatone'sis (*trauma*, wound, *nesis*, spinning). Suture of wounds.

Traumatopnœa, trow-mat-op-ne'ah (*trauma, pneo*, to breathe). A condition met with in wounds of the lung and pleura, in which the air passes in and out of the wound during respiration.

Traumatopyra, trow-mat-op'ir-ah (*trauma*, wound, *pur*, fever). Wound fever or fever consecutive to a wound.

Trav'ail ([F.] *travailler*, to labor). Parturition.

Trav'eller's joy. Clematis vitalba.

Treac'le. Molasses; theriaca. **T., Eng'lish,** Teucrium chamædrys. **T., Ven'ice,** theriaca.

Tread. Cicatricula. **T. of the cock,** molecule.

Treat'ment (*tracto*, to treat). Means employed for the relief of disease. **T., dry,** one in which the patient is almost wholly, if not wholly, interdicted from the alimentary use of fluids.

Tree, elk. Andromeda arborea. **T. of heav'en,** Ailanthus glandulosa. **T. of life,** Thuya occidentalis. **T., sour,** Andromeda arborea.

Treeak farook. Native nostrum, used in India for beriberi; a thick extract into which some terebinthinate enters, which is said to subdue the pulse.

Tref'oil. Hepatica triloba. **T. bean, stink'ing,** anagyris. **T., marsh,** Menyanthes verna. **T., shrub'by,** Ptelea trifoliata. **T., sour,** Oxalis acetosella. **T. ten'don,** see *Tendon, trefoil*. **T., wa'ter,** Menyanthes trifoliata.

Treha'la. Cocoons of Larinus maculatus, habitat Asia Minor.

Tre'halose. A crystallizable carbohydrate derivative from ergot and trehala.

Tre'ma (*trema*, opening). Foramen; vulva.

Tre'matode (*trema*, hole). Order of Entozoa to which parasitic worms of the lower intestines belong; flukes.

Trem'bles. A disease in cattle producing, in the

human subject, a typhoid affection known as milk-sickness. Mercurial tremor.

Trem'bling. Tremor. **T. fe'ver,** intermittent fever. **T., mercu'rial,** palsy, mercurial. **T., se'nile,** involuntary but uniform contractions of muscles over a limited space, and succeeding each other with excessive rapidity, in old persons generally.

Tremel'la auric'ula Ju'dæ (*tremo*, to tremble). Peziza auricula.

Tre'mor (*tremo*, to tremble). *Trembling.* Involuntary agitation of the body or of some part of it, without any obstacle to voluntary motion. It depends, generally, upon debility of the muscular or of the nervous system, and hence is observed in convalescence and in typhoid affections. It occurs also in old people, in hard drinkers, and in workers in certain metals, as mercury and lead. In the last case it is called *Tremor metallicus* or *metallurgorum, Metallic shaking palsy.* Tremor seems to resemble paralysis more than convulsion; see *Palsy, mercurial, Paralysis agitans,* and *Pavitatio.* **T. ar'tuum,** paralysis agitans. **T. cor'dis,** hippus palpitation. **T. ab hydrar'gyro,** mercurial palsy. **T., lead,** lead palsy. **T., mercu'rial,** mercurial palsy. **T. metal'licus,** see *Tremor.* **T. metallurgo'rum,** see *Tremor.* **T. potato'rum,** see *Delirium tremens.* **T., purr'ing,** agitation, like the purring of a cat, felt by the hand applied over the præcordial region, probably from narrowing of the auriculo-ventricular openings.

Trem'ulous i'ris. Tremulous movement of the iris, due to loss of support occasioned by removal or displacement of the lens.

Trendelenburg's posi'tion or post'ure. Position made use of by abdominal surgeons, the patient's body being originally made to recline at an angle of about 45°, but now modified so that the entire lower extremities are elevated at an angle of from 15° to 20°, under the view that gravitation of the abdominal viscera toward the diaphragm will aid in overcoming some of the difficulties attending such operations.

Trepan'. See *Trephine.*

Trepanatio, trep-an-ah'she-o. Trepanning.

Trepan'ning. Methodical application of the trepan. See *Trephine.*

Trephine' (*trepo*, to turn). *Trepan.* An instrument consisting of a simple cylindrical saw, with a handle placed transversely like that of a gimlet; from the centre of the circle described by the teeth of the saw a sharp perforator projects, called the centrepin, which can be removed at the surgeon's option. It is used to fix the instrument until the teeth of the saw have made a circular groove sufficiently deep for it to work steadily. This instrument is used for removing circular disks of bone.

Trephining, tre-fi'ning. Application of a trephine.

Trepida'tio (*trepido*, to be agitated). Tremor; rhythmical tremor of the foot in certain diseases. **T. cor'dis,** rapid and feeble palpitation or fluttering of the heart.

Trepidation, trep-id-a'shun. See *Trepidatio.*

Tresis, tra'sis (*tresis*, boring). Perforation; forcible solution of continuity in a soft part, commencing externally. Trepanning. Wound. **T. cau'sis,** burn. **T. punctu'ra,** puncture. **T. vul'nus,** wound. **T. vul'nus lacera'tum,** lacerated wound. **T. vul'nus sim'plex,** cut.

Tresso'ria. Hair covering the mons Veneris, the absence of which has, by the vulgar, been esteemed a matter of reproach.

Tri. In composition three.

Tri'al, beset'ting. Masturbation. **T. by bier'-right,** an ordeal in which the wounds of a murdered person were supposed to bleed afresh if the body were touched ever so lightly, in any part, by the murderer.

Tri'al-frame. A spectacle frame used for holding trial-glasses.

Tri'al-glasses or tri'al-case. A collection of lenses used in testing refraction of the eye.

Tri'al-lenses. Lenses used in testing refraction of the eye.

Tri'angle, carot'id. See *Cervical triangles.* **T. of Hes'selbach,** a triangular interval on the posterior aspect of the abdominal wall, through which direct inguinal hernia finds its way, and the sides of which are formed by the epigastric artery and the margin of the rectus muscle, and the base by Poupart's ligament. **T., occip'ital,** see *Cervical triangles.* **T. of Pet'it,** a triangular space bounded below by the crest of the ilium, in front by the border of the external oblique muscle, and behind by the latissimus dorsi. **T. of Scar'pa,** a triangular depression in the upper part of the thigh, the base of which is formed by Poupart's ligament, the outer side by the tendon of the psoas and iliac muscles and the sartorius, and the inner side by the pectineus and adductor longus. Through the centre of this hollow the femoral artery runs, with the femoral vein internal to it. **T., subcla'vian,** see *Cervical triangles.* **T., submax'illary,** see *Cervical triangles.* **T., ves'ical,** see *Urinary bladder.*

Tri'angles, cer'vical. See *Cervical.*

Trian'gular. Having three angles. **T. fas'cia,** triangular ligament of abdomen. **T. fibrocar'tilage,** triangular plate between ulna and bones of wrist. **T. lig'ament,** *Infrapubian ligament;* a ligamentous fascia situate transversely beneath the symphysis pubis, which it strengthens. Also a ligament extending from the coracoid to the acromial process of the scapula. **T. lig'ament of the abdo'men,** band of tendinous fibres arising from Poupart's ligament along the pectineal line, and, passing beneath the spermatic cord, interlacing with the opposite fellow at the linea alba. **T. lig'ament of ure'thra,** continuation of deep layer of superficial fascia, attached to the under surface of the symphysis pubis and rami of ischium and pubis. **T. lig'aments of liv'er,** layers of peritoneum which unite and extend from the sides of the diaphragm to the margins of the liver.

Triangula'ris. Depressor anguli oris. **T. coccy'gis,** coccygeus. **T. na'si,** compressor naris. **T. ster'ni,** a triangle-shaped muscle, the base being directed downward, situate at the anterior and inner part of the chest behind the cartilages of the ribs. It is attached to the posterior, lateral, and inferior part of the sternum, whence its fibres pass upward and outward, and terminate at the cartilages of the third, fourth, fifth, and sixth true ribs. This muscle depresses the ribs and contributes to expiration.

Triatom'ic. A term applied to an element whose valence is equivalent to three atoms of hydrogen.

Tri'badism. See *Tribas.*

Trib'alus (*tribalos*). Trapa natans.

Tri'bas (*tribas*). A female whose clitoris is so large as to cause her to be regarded as an hermaphrodite; one who attempts or practices sexual intercourse with another female—*tribadism.*

Triba'sic (*tri, basis*). A term applied to an acid having three replaceable hydrogens.

Tribromaldehyde, tri-brome-al'de-hide. Liquid substance, very much like chloral, formed by action of bromine on alcohol.

Tribromomethane, tri-bro-mo-meth'ane. Bromoform.

Tribromophenol, tri-bro-mo-fe'nol. Bromol.

Tribromphenol, tri-brome-fe'nol. A crystalline substance resulting from the action of carbolic acid on bromine-water; used externally as a surgical antiseptic and disinfectant in purulent and gangrenous conditions.

Trib'uli aquat'ici (pl. of **Tribulus**). See *Trapa natans.*

Tribu'tum luna're (lunar or monthly tribute). Menses. **T. men'struum,** menses.

Tricæ, trik'e (*thrix, trichos*, hair). Plica. **T. incubo'rum,** plica. **T. scrofo'rum,** plica.

Tricago, tre-kah'go. Teucrium chamædrys.

Tricaudalis, tre-kaud-al'is (*tri, cauda*, tail). Retrahens auris.

Tricephalus, tre-sef'al-us (*tri, cephale*, head). A monster with three heads.

Triceps, tri'seps (*tri, caput*, head). Name given to muscles having three fleshy bundles at one of their

extremities. **T. adduc'tor fem'oris,** under this appellation are comprehended three distinct muscles: Adductor brevis, A. longus, and A. magnus. See *Adductor.* **T. aur'is,** retrahens auris. **T. brachia'lis** or **brach'ii,** triceps extensor cubiti. **T., cru'ral,** triceps cruris. **T. cru'ris,** *Crural;* muscle situate at the anterior, inner, and outer part of the thigh, and formed of three bundles at its superior extremity, viz.: 1. A middle fasciculus, the cruralis, crureus, or femoreus; see *Cruralis.* 2. An external fasciculus, the vastus externus. 3. An inner fasciculus, the vastus internus. It is attached above to the anterior, inner, and outer surfaces of the femur, and to the two edges of the linea aspera from the base of the trochanter to within four fingers' breadth of the knee. Below it terminates by a large tendon, which is attached to the base and edges of the patella, as well as to the inner and outer tuberosities of the tibia. The triceps extends the leg on the thigh, and conversely. **T. exten'sor cu'biti,** muscle occupying all the posterior part of the humerus. It arises by three heads: The first or long head—long head of the biceps externus of Douglas, anconeus major of Winslow—arises from the upper margin of the glenoid cavity. The second head, or short head of the biceps externus of Douglas, anconeus externus of Winslow, arises from the base of the great tuberosity. The third head—brachialis externus of Douglas, anconeus internus of Winslow—the shortest of the three, arises from the back part of the os humeri, behind the flat tendon of the latissimus dorsi. These three portions unite about the middle of the arm as one muscle, which is inserted at the upper part of the olecranon. It extends the forearm on the arm, and conversely. **T. mag'nus,** adductor magnus. **T. mi'nor,** adductor longus femoris. **T. secun'dus,** adductor brevis. **T. su'ræ,** see *Gastrocnemii.*

Trichæ incuborum, trik'e in-ku-bo'rum (*thrix, trichos,* hair, *incubi,* fauns [?]). Plica. **T. scrofo'rum,** plica.

Trichangia, trik-an-je'ah (*tricho, angeion,* vessel). Capillary vessels.

Trichangiectasia, trik-an-ge-ek-taz'e-ah (*tricho, angeion,* vessel, *ektasis,* dilatation). Morbid dilatation of the capillary vessels.

Trichatrophia, trik-at-rof'e-ah. Disease of the hair in which it becomes altered in structure, soft and brittle, with atrophy of the hair-bulb.

Trichaux'e or **Trichauxis,** trik-owks'is (*tricho, auxe,* increase). Increase in the quantity and size of the hair without change of texture.

Trichauxis, trik-owks'is. Trichauxe.

Trichera arvensis, trik-a'rah ar-ven'sis (*thrix,* gen. *trichos,* hair). Scabiosa.

Trichia, trik'e-ah (*thrix,* gen. *trichos,* hair). Entropion.

Trichiasis, trik-e'as-is (*thrix, trichos,* hair). *Morbus pilaris.* This name has been given to several affections. A disease of the kidneys or bladder in which filamentous substances resembling hairs are passed in the urine. A painful swelling of the breasts in childbed women, when the milk is excreted with difficulty. Inversion of the eyelashes—trichiasis ciliorum. See *Entropion.* Trichiasis coacta is a matting and interlacing of hair. **T. cilio'rum,** see *Trichiasis.* **T. coac'ta,** see *Trichiasis.* **T. lac'tea,** knotty swelling of the female mammæ from accumulation and arrest of milk in the galactophorous ducts.

Trichilia (trik-il'e-ah) **emet'ica.** *Elcaja.* Tree, ord. Meliaceæ, common on the mountains of Yemen and in Senegal. The fruit is used by the Arabs as an emetic. **T. trifolia'ta,** a bush of Curaçoa, a decoction of the roots of which is used to promote abortion.

Trichina spiralis, trik-e'nah spir-al'is (*thrix, trichos,* hair, from its small size). A small species of entozoa, fam. Nematoïdea, discovered in the voluntary muscles, and found especially in swine. Trichinæ consist of minute oblong cysts, containing at first a granular substance and afterward calcareous matter. When taken with the food the cysts are dissolved, and parasites multiply in the intestines and then migrate to the muscles. Abdominal pains, diarrhœa, and vomiting, due to perforation of the intestines by newly-produced worms, come on within ten days after their ingestion. Secondary symptoms relate to the muscles, and resemble myalgia, rheumatism, or typhoid fever. The condition thus induced has been called trichiniasis, trichinitis, trichina, trichinous or trichinatous disease. See *Parasites* and *Worms.*

Trichiniasis (trik-in-e'as-is), **Trichinitis** (trik-in-e'tis), or **Trichinosis,** trik-in-o'sis (*trichina, osis*). Morbid condition arising as a result of entrance of trichinæ into the human system. See *Trichina spiralis.*

Trichinoscope, trik'in-o-skope. Instrument used in detecting trichinous parasites in affected meat.

Trichinosis, trik-in-o'sis. See *Parasites.*

Trichinous, trik'in-us. Relating or appertaining to trichina.

Trichiosis, trik-e-o'sis (*thrix, trichos,* hair). Trichiasis. **T. dis'trix,** hair of the scalp, weak, slender, and splitting at the extremities.

Trichismus, trik-iz'mus. Capillary fracture, fissure, or crack.

Trichiuria, trik-e-u're-ah (*thrix, oura,* tail). Trichocephalus.

Trichloracetic (tri-klor-as-e'tik) **ac'id.** A compound formed by oxidation of chloral by means of nitric acid.

Trichlo'ride of i'odine. Decomposed by water into hydrochloric and iodic acids. Used externally.

Trichlorphenol (tri-klor-fe'nol) or **Trichlorphen'ic ac'id.** A derivative of carbolic acid having a tarry odor and pungent taste; used as a disinfectant.

Tricho, trik'o (*thrix, trichos,* hair), In composition, hair.

Trichocardia, trik-o-kar'de-ah (*thrix, trichos,* hair, *cardia,* heart). Pseudo-membranous elevations occurring in exudative pericarditis, giving rise to the so-called hairy heart.

Trichoceph'alus (*tricho, kephale,* head). *Long thread-worm, Whipworm.* A worm from an inch and a half to two inches long, head acute, the body spirally involuted in the male, almost straight in the female. The *Trichocephalus dispar* generally inhabits the cæcum and colon, and is rarely met with in the small intestines; it gives rise to no peculiar symptoms.

Trichocirsus, trik-o-sir'sus (*tricho, kirsos,* a dilated vessel). Trichangiectasia.

Trichoclasia (trik-o-klaz'e-ah) or **Trichocla'sis** (*tricho, klasis,* fracture). A breaking of the hair, giving it a jointed appearance.

Trichocryptoses, trik-o-krip-to'sees (*thrix,* hair, *kruptosis,* hiding). Diseases of the hair-follicles.

Trichodangiitis, trik-o-dan-je-e'tis (*thrix,* hair, *angeion,* vessel). Inflammation of the capillaries.

Trichodyschroi'a (*tricho, dyschroia,* bad or defective color). Discoloration of the hair; alteration or variation of the natural pigment of the hair.

Trichogenous, trik-oj'en-us (*tricho, gennao,* to generate). Hair-forming; promoting the growth of the hair.

Trichoglossia, trik-o-glos'se-ah (*thrix,* hair, *glossa,* tongue). Peculiar hairy appearance of the tongue, due to hypertrophy of the sheath of the filiform papillæ.

Trichoid, trik'oid (*thrix,* hair). Having the appearance of hair.

Trichol'abis (*tricho, labis,* forceps). Tweezers, especially for extracting hairs.

Tricholabium, trik-o-lab'e-um. Tweezers, especially for extracting hairs.

Trichologia, trik-o-loj'e-ah (*tricho, lego,* to pluck). Carphologia. See *Trichology.*

Trichology, trik-ol'o-gy (*tricho, logos,* description). A treatise on the hair.

Trichoma, trik-o'mah (*thrix,* hair). Villous or hairy covering; small fibre or fibril; plica.

Trichomanes, trik-om'an-ees (*tricho, manos,* thin). Asplenium trichomanoïdes. **T. crena'ta,** Asplenium trichomanoïdes.

Trichomaphyte, trik-o'ma-fite (*trichoma,* plica, *phuton,* vegetable). A cryptogamous growth found in

plica, and said by some to be its cause; mycoderma plicæ.

Trichomation, trik-o-mat'e-on. Capillamentum.

Trichomatose (trik-o'mat-ose) **hair** (*trichoma*). Plica.

Trichomatosis, trik-o-mat-o'sis (*trichoma,* growth of hair). Disease due to parasites, in which the hair becomes matted together.

Trichomonas, trik-om'on-as (*tricho, monad*). *Trichomonad.* An animalcule found in the mucus of the vagina where cleanliness has not been attended to—*T. vaginalis.* By some it is considered to be nothing more than ciliated epithelium separated from the uterus.

Trichomyces decalvans, trik-om-e'sees de-kal'vans (*tricho, myces,* fungus). See *Porrigo decalvans.* **T. tonsu'rans,** see *Porrigo decalvans.*

Trichomycosis (trik-o-mik-o'sis) **capilli'tii.** See *Kerion.* **T. favo'sa,** tinea favosa. **T. trichophyti'na,** tinea trichophytina.

Trichomyko'sis. Trichomycosis.

Trichomysis nodosa, trik-om'is-is no-do'sah. Disease of the hair of the genitals and axilla characterized by nodosities, due to development of bacteria within the layers of the shaft, which later becomes encapsulated.

Trichonosis, trik-on-o'sis. Porrigo. **T. ca'na,** canities. **T. furfura'cea,** porrigo decalvans. **T. pli'ca,** plica. **T. polio'sis,** poliosis.

Trichon'osus (*tricho, nosos,* disease). A disease of the hair.

Trichopathia (trik-o-path-e'ah) **pli'ca** (*tricho, pathos,* affection). Plica polonica.

Trichopathic, trik-o-path'ic (same etymon). Relating or appertaining to affections of the hair.

Trichop'athy. Plica polonica.

Trichophyia (trik-o-fe'e-ah) or **Trichophyt'ica** (*tricho, phuo,* to grow). Remedies promoting the growth of the hair.

Trichophyton, trik-of'it-on (*tricho, phuton,* vegetable). A fungus giving rise to disease of the hair. See *Plica.* **T. decal'vans,** see *Porrigo decalvans.* **T. sporuloï'des,** see *Fungus, Parasites,* and *Plica.* **T. tonsu'rans,** see *Fungus* and *Porrigo decalvans.*

Trichophytosis, trik-o-fit-o'sis. Disease of the skin due to trichophyton. **T. imbrica'ta,** form of tinea in which the scales are imbricated. **T. squamo'sa,** scaly form of tinea. **T. vesiculo'sa,** vesicular form of tinea.

Trichopoliosis, trik-o-po-le-o'sis (*thrix,* hair, *polios,* hoary). Grayness of hair.

Trichorhexis nodosa, trik-o-rheks'is no-do'sah (*thrix, rhexis,* breaking). Trichopoliosis; nutritive defect of the scalp giving rise to fragility, swelling, and bursting of hair; probably parasitic in origin.

Trichorrhœa, trik-or-rhe'ah (*tricho, rheo,* to flow). Fall of the hair from any cause.

Trichosanthes (trik-o-san'thees) **ama'ra** (*tricho, anthos,* flower, from the ciliated corollæ). Order, Cucurbitaceæ. A plant of India; the seeds are bitter and astringent, sometimes emetic, and in larger doses a poison. **T. corda'ta,** the root is used by the natives of India as a substitute for calumba root. **T. cucumer'ina,** the fruit is considered in India to be anthelmintic. **T. inci'sa,** *Gashed trichosanthes* of India; the fruit is poisonous, and used as an application to offensive sores and to ozæna. **T. villo'sa** of Java, the fruit acts like colocynth.

Trichoschisis, trik-os'kis-is (*tricho, schizo,* to split). Splitting of the hairs at their extremities.

Trichosis, trik-o'sis. Morbid organization or deficiency of hair. **T. a'rea,** porrigo decalvans. **T. a'thrix,** alopecia. **T. bul'bi,** small tumor on anterior part of eyeball, having hair growing from it. **T. dis'trix,** distrix. **T. entro'pion,** trichiasis. **T. furfura'cea,** porrigo furfurans. **T. hirsu'ties,** hirsuties. **T. pli'ca,** plica. **T. polio'sis,** poliosis. **T. seto'sa,** porcupine disease of the skin; see *Hystriciasis.*

Trichosyphilosis, trik-o-sif-il-o'sis (*tricho, syphilis*). *Syphiloma of the hair.* A change in the structure of the hair, the shaft of which becomes swollen and dark-colored, drying up and splitting or breaking off—a result of the syphilitic taint.

Trichothecium, trik-o-tha'se-um (*tricho, theke,* place of deposit). A form of fungus giving rise to a vegetable parasitic disease of the hair.

Trichoton, trik-o'ton (*trichosis,* growth of hair). Scalp.

Trichuris, trik-u'ris (*tricho, oura,* a tail). Trichocephalus.

Triclisperma (trik-le-spur'mah) **grandiflo'ra** (*thrix,* hair, *sperma,* seed). Polygala paucifolia.

Tricornis, trik-or'nis (*tri cornu,* three horns). Having three processes.

Tricrotic, tri-kro'tik. See *Pulse, tricrotic.*

Tricrotous, trik'ro-tus. See *Pulse, tricrotic.*

Tricuspid, tri-kus'pid (*tri, cuspis,* a cusp, a point). That which has three points. **T. insuffic'iency,** a condition resulting from endocarditis, obstructive diseases of the lungs by cirrhosis or emphysema, etc., the symptoms being those of obstruction in the pulmonary circulation, with congestion of the veins of the general or systemic circulation. **T. valves,** three triangular valvular duplicatures formed by the inner membrane of the right cavities of the heart around the auriculo-ventricular orifice. The elongated and pointed top of each of these valves is continuous with the chordæ tendineæ, which set out from the columnæ carneæ of the heart. These valves allow the blood to flow from the auricle into the ventricle, and prevent its reflux into the auricle.

Tricuspis, trik-us'pis. Tricuspid.

Triencephalus, tre-en-sef'al-us (*tri, enkephalos,* encephalon). A monster wanting three cephalic organs of sense—smell, hearing, and vision. See *Aprosopia.*

Triens, tre'ens (*tri,* three). The third part of a pound; four ounces troy.

Triethylamine, tri-eth'il-am-een. $C_6H_{15}N$. Ptomaïne from some forms of putrefying fish and cultures of a bacillus in poisonous sausage. See *Ptomaïnes* (table).

Trifacial, tri-fa'shal. Trigemini.

Trifolium acetosum, tre-fo'le-um as-e-to'sum (*tri, folium,* a leaf). Oxalis acetosella. **T. aquat'icum,** Menyanthes trifoliata. **T. au'reum,** Hepatica triloba. **T. cervi'num,** Eupatorium cannabinum. **T. fibri'num,** Menyanthes trifoliata. **T. hepat'icum,** Hepatica triloba. **T. melilo'tus officina'lis,** *Common melilot,* ord. Leguminosæ. The infusion or distilled water of this plant has been employed in ophthalmia. Also used in fomentations, glysters, etc. **T. officina'le,** T. melilotus officinalis. **T. paludo'sum,** Menyanthes trifoliata. **T. palus'tre,** Menyanthes trifoliata. **T. praten'se,** red clover; the flower-heads are diuretic and alterative; given in infusion and fluid extract.

Trigastric, tri-gas'trik (*tri, gaster,* belly). Having three bellies.

Trigem'ini (*tri, geminus,* double, threefold, triplets). *Trifacial nerve.* The fifth pair of nerves. This nerve arises by two roots—a posterior, larger or sensory, and an anterior, smaller or motor root. The larger root arises chiefly from the gray tubercle of Rolando or upper extremity of the posterior gray horn of the medulla; the smaller, motor root arises from two masses of multipolar cells situate on the inner side and close to the gray tubercle. The two roots pass through an opening in the dura mater, and then run between the bone and the dura mater to the opening in the petrous portion of the temporal bone, where the sensory fibres form the Gasserian ganglion; while the motor nerves pass onward, having no connection with this ganglion. The branches of the gemini are the ophthalmic, superior maxillary, and inferior maxillary. The whole of the first and second branches and a part of the third are sensory nerves, while the remaining part of the third—the gustatory or lingual—is entirely motiferous, and passes to the pterygoid and other muscles concerned in mastication.

Trig'ger fin'ger. Name given to a condition in which a joint of a finger suddenly becomes locked, either in flexion or extension. **T. thumb,** a similar condition, but restricted to the thumb.

Trigo'na cervica'lia. Cervical triangles.

Trigonel'la fœ'num (dim. of **Trigonon**, triangle, from the shape of its flower). Ord. Leguminosæ. A native of the south of France. The seeds have a strong, disagreeable smell and an unctuous, farinaceous taste, accompanied by a slight bitterness. They are chiefly used in poultices.

Trigonocephaly, tri-gon-o-sef'al-e. Peculiarly-shaped head, representing a cone with the apex in front.

Trigo'nos (*trigon*). Triangular.

Trigo'num. Trigone. **T. carotide'um,** carotid triangle. **T. cerebra'le,** fornix. **T. cervica'le,** portion of gray commissure of the spinal cord for reception of the blood-vessels. **T. cervica'le infe'rius,** posterior triangle; see *Cervical triangles.* **T. cervica'le supe'rius,** anterior triangle; see *Cervical triangles.* **T. cine'reum,** extension of gray substance of floor of third ventricle connected with optic chiasm. **T. clavipectora'le,** the triangular space between clavicle, pectoralis minor, and thoracic wall. **T. collatera'le,** posterior triangle; see *Cervical triangles.* **T. col'li media'num,** the two anterior cervical triangles regarded as one. **T. cor'aco-acromia'le,** triangular space between a line from apex of acromion and apex of coracoid process and the clavicle. **T. cubita'le,** fossa cubiti. **T. deltoïdeopectora'le,** infraclavicular fossa. **T. du'rum,** space between anterior corpora quadrigemina. **T. fluc'tuans,** posterior commissure of cerebrum. **T. haben'ulæ,** small depression on back and upper surface of optic thalamus. **T. hypoglos'si,** hypoglossal area. **T. infe'rius commissu'ræ posterio'ris cer'ebri,** space below posterior commissure of cerebrum: **T. infraclavicula're,** infraclavicular fossa. **T. inguina'le,** Scarpa's triangle. **T. intercrura'le** or **interpeduncula're,** interpeduncular space. **T. Lieutau'di,** trigone of bladder. **T. lumba'le infe'rius,** Petit's triangle. **T. lumba'le supe'rius,** tetragonum lumbale. **T. mol'le,** posterior commissure of cerebrum. **T. olfacto'rium,** olfactory trigone. **T. omoclavicula're,** subclavian triangle. **T. omotrape'zium,** occipital triangle; see *Cervical triangles.* **T. palati'num,** surface for articulation of orbital process of palate-bone at superior and mesial angle of superior maxillary. **T. pen'sile,** posterior commissure of cerebrum. **T. Petiti,** see *Petit, triangle of.* **T. Scar'pæ** or **subinguina'le,** Scarpa's triangle. **T. submaxilla're,** submaxillary triangle; see *Cervical triangles.* **T. subpinea'le,** space between the corpora quadrigemina anteriora and pineal gland. **T. supe'rius commissu'ræ posterio'ris,** space above posterior commissure of cerebrum and the anterior corpora quadrigemina. **T. va'gi,** vagus area. **T. vesi'cæ,** trigone of bladder.

Trigo'nus Lieutaud'i (*trigonon*). See *Urinary bladder.* **T. vesi'cæ,** see *Urinary bladder.*

Tril'lium erec'tum (*trilix*, tissue of three threads; the parts of this plant being chiefly in threes). Indigenous plant; its rhizome is astringent, tonic, and antiseptic in genito-urinary affections. **T. latifo'lium,** *Broadleaf bethroot, Bethroot, Rattlesnake root, Wakerobin, Coughroot, Indian balm, Ground lily, Jews' harp, Indian shamrock, Pariswort, Truelove,* ord. Trilliaceæ. Plant peculiar to North America, whose root is astringent, tonic, and antiseptic; used in genito-urinary affections. All species of Trillium possess the same properties.

Trimammius, tre-mam'me-us. Name given to congenital malformation of the breasts in which there are three nipples.

Trimestrium, tre-mes'tre-um. Term applied to certain diseases or conditions in which symptoms occur every three months.

Trimethylamine (tri-meth'il-am-een) or **Trimethyl'ia.** C_3H_9N. Volatile alkaline liquid prepared from the same source as propylamin and isomeric with it; is found in cod-liver oil. Ptomaïne obtained from putrefactive decomposition of certain bodies, as fish, from ergot, from certain weeds, cod-liver oil, etc. It has been used in acute articular rheumatism; also as an antipyretic and in gout, and externally in form of a liniment in chronic rheumatism. The hydrochlorate is the salt employed. Dose, gr. iij–x. See *Ptomaïnes* (table).

Trimethylami'ni hydrochlo'ras. Hydrochlorate of trimethylamine. See *Trimethylamine.*

Trimethylenediamine, tri-meth-il-een-di'am-een. $C_3H_{10}N_2$. Poisonous ptomaïne from culture of the comma bacillus on beef-broth.

Trimethylethylene, tri-meth-il-eth'il-een. Pental.

Trimethylglycine, tri-meth-il-glis'een. See *Betaïne.*

Trimethylxanthin, tri-meth-il-zan'thin. Caffeine.

Trineu'ral fascic'ulus. Solitary bundle of fibres in upper portion of spinal cord and medulla oblongata, connected with the roots of the vagus and glossopharyngeal nerves.

Trinitrin, tri-ni'trin. Nitroglycerin.

Trinitroglycerin tri-ni-tro-glys'er-in. Nitroglycerin.

Trinitrophenic (tri-ni-tro-fe'nik) **ac'id.** Picric acid.

Trinitrophenol, tri-ni-tro-fee'nol. Picric acid.

Triocephalia, tre-o-sef-al'e-ah. Aprosopia. See *Triencephalus.*

Triocephalus, tre-o-sef'al-us. Triencephalus.

Trional, tre'o-nal. Diethylsulphone methylethylmethane. Allied in composition to sulphonal; hypnotic.

Trior'chid (*tri, orchis*, testicle). Having three testicles.

Triorchis, tre-or'kis (*tri, orchis*, testicle). One who has three testicles.

Triosteosper'mum. Triosteum.

Trios'teum (*tri, osteon*, bone, in allusion to the three bony nuts). *Bastard ipecacuanha, Fever root, Feverwort, Tinker's weed, Horse ginseng* or *gentian, Ipecac, Wild coffee, White ginseng, Gentian, White gentian, Sweet bitter;* ord. Caprifoliaceæ. Indigenous; cathartic in doses of twenty or thirty grains; sometimes operates as a diuretic, also as an emetic. **T. angustifo'lium,** *T. minus,* has similar virtues.

Tripal'mitin. Solid fat, forming an ingredient of olive oil, being in combination with oleic acid, of which last olive oil is largely composed.

Tripharmacum, tre-farm'ak-um (*tri, pharmakon*, medicine). A medicine composed of three ingredients.

Trip'ier's amputa'tion. Modification of subastragaloid amputation of the foot by leaving the upper part of the calcaneum, which is sawn through on a level with the sustentaculum tali and at right angles to the axis of the leg; external incisions are made as in Chopart's amputation.

Triple phosphate, trip'l fos'fate. See *Calculi, urinary.*

Trip'let (*triplex*, triple). One of three children born at the same accouchement or gestation. **T. mon'sters,** such as have parts of the body tripled; a rare condition.

Triploblastic, trip-lo-blas'tik (*triplex*, triple, *blastos*, germ). Having three germ-layers.

Triplo'pia (*triplex*, triple, *ops*, eye). Triple vision.

Tri'pod, vi'tal (*tri, pous*, foot). The heart, lungs, and brain have been so called, as their united action is necessary for the maintenance of life.

Trip'oli sen'na. See *Senna.*

Trip'olite or **Trip'olith.** Substance used in fixation dressings; applied in the same manner as plaster-of-Paris dressing.

Trip'sis (rubbing). Contusion; trituration.

Tripudiatio (trip-u-de-ah'she-o) **spas'tica** (*tripudio*, to leap, to dance). Chorea.

Tri'pus (tripod) **cœli'acus** or **Hal'leri.** See *Cœliac artery.*

Triquetra (trik'et-rah) **os'sa** (*triquetrus*, three-cornered). Wormian bones.

Triq'uetrum (**os**). Cuneiform bone.

Tris'mus (*trizo*, to gnash). *Masticatory spasm of the face; Locked jaw.* Spastic closure of the under jaw, a partial tetanus, arising from erethism of the masticatory or motor branch of the fifth pair of nerves. *T. nascentium* or *neonatorum, Nine-day fits,*

attacking infants during the two weeks from birth, and *T. traumaticus*, originating from a wound, are sometimes described. **T. capistra'tus**, brédissure. **T. catarrha'lis maxilla'ris**, neuralgia of the jaw. **T. clon'icus**, neuralgia faciei. **T. cyn'icus**, see *Canine laugh*. **T. dias'trophe Sauvages'ii**, paralysis, Bell's. **T. dolorif'icus**, neuralgia faciei. **T. maxilla'ris**, neuralgia faciei. **T. nascen'tium**, see *Trismus*. **T. neonato'rum**, see *Trismus*. **T. sardon'icus**, risus sardonicus. **T., traumat'ic**, the sequence of a wound or injury.

Trisplanchnia, tre-splank'ne-ah (*tri*, *splanchnon*, viscus). Cholera.

Trisplanchnic, tri-splank'nik. Applied to the sympathetic system because of its relation to the viscera of the great cavities. **T. nerve**, *Great sympathetic, Intercostal, Ganglionic* or *Vertebral nerve, Nerve of organic life, System of organic life, Nervous automatic system of functions, Organic nervous system*. Termed trisplanchnic because of its distribution to the organs in the three great splanchnic cavities—the cranium, chest, and abdomen. It is composed of ganglia united by intermediate branches, passing along the side of the spine to the lowest part of the trunk, communicating by a branch with each of the thirty pairs of spinal nerves and several of the cerebral nerves, and detaching nerves from its several ganglia which accompany the arteries and are distributed particularly to the organs of involuntary functions. At its upper part it is concealed in the carotic canal and cavernous sinus, and is joined there by a branch of the 6th pair of nerves and by a twig from the Vidian nerve of the 5th pair. It forms three ganglions in the neck—the superior, middle (thyroid ganglion), and inferior (vertebral ganglion); twelve in the back, the thoracic; five in the loins, the lumbar; and three or four sacral. It unites at the coccyx with its fellow from the opposite side, forming a small ganglion—the coccygeal, ganglion impar, or azygous ganglion. The great sympathetic is a distinct nervous system, supplying the organs of involuntary motion; for, although communicating with both brain and spinal marrow, it does not seem to be immediately under the influence of either. Its special functions are not yet well understood.

Trisplanchnitis, tre-splank-ne'tis (*trisplanchnic*, *itis*). Spasmodic cholera.

Trissa'go. Teucrium chamædrys. **T. palus'tris**, Teucrium scordium.

Trister'nal bone. Third portion of the sternum, corresponding to the third intercostal space.

Tristima'nia (*tristis*, sad, *mania*). Melancholy.

Tristitia, tris-tish'e-ah (*tristis*, sad). Despondency; prostration of spirits; melancholy.

Tritæophy'a America'na. Yellow fever.

Tritæoph'yes or **Tritæophya**, trit-e-of'e-ah (*tritæus*, tertian, *phue*, form). Fever whose type approaches the tertian.

Tritæus, trit-e'us. Tertian fever.

Triticeoglossus, trit-is-e-o-glos'sus. An aberrant muscle occasionally arising from the cartilago triticea in the lateral thyrohyoid ligaments, and finding its point of insertion in the side of the tongue.

Trit'ici fari'na. Wheat-flour. See *Triticum*.

Trit'icin. Principle derived from triticum, especially T. repens.

Triticum æstivum, trit'ik-um ees-te'vum (*tero*, to thrash). *Summer wheat, Winter wheat*. Ord. Gramineæ. From these plants wheaten flour is obtained by grinding the seeds—wheat. Bread mixed with milk constitutes the ordinary emollient poultice, and the crumbs of bread, micæ panis, are a common excipient for pills and boluses. Mica panis, bread-crumb, has been officinal in the British Pharmacopœia, and is used as an ingredient of cataplasma carbonis. **T. arven'se**, T. repens. **T. cerea'le**, T. æstivum. **T. ceval'los**, T. æstivum. **T. compac'tum**, T. æstivum. **T. erina'ceum**, Triticum æstivum. **T. fa'ginum**, Polygonum fagopyrum. **T. Gaertneria'num**, T. æstivum. **T. glau'cum**, see *T. æstivum* and *T. repens*. **T. hyber'num**, see *T. æstivum*. **T. Linnæa'num**, T. æstivum. **T. mu'ticum**, see *T. æstivum*. **T. pruino'sum**, T. æstivum. **T. re'pens**, *Grass, Dog-grass, Couch-grass, Quickens, Twitch-grass;* the roots are sweet, and possess aperient and diuretic properties. Used in genito-urinary irritation and inflammation. Triticum (Ph. U. S.) is the rhizome of T. repens; dose of fluid extract, f℥j. Used in cystitis. **T. sic'ulum**, T. hybernum. **T. spel'ta**, see *Alica*.

Tritio, trish'e-o (*tero*, to rub, to grind). Contrition; trituration.

Tri'ton palus'tris (Triton, the sea deity). See *Ectozoa*.

Trito'rium (*tero*, to wear away). Infundibulum.

Tritubercular, tri-tu-bur'ku-lar. Having three cusps or prominences.

Tritura, trit-u'rah. Contrition; trituration.

Trituratio elaterini, trit-u-rah'she-o el-at-er-e'ne. Mix thoroughly ten parts of elaterin with ninety parts of sugar of milk (Ph. U. S.). Dose gr. $\frac{1}{8}$–$\frac{1}{4}$.

Tritura'tion (*tero*, to rub or grind). The act of reducing a substance to powder. According to the U. S. Pharmacopœia, triturations—*Triturationes*—are to be made as follows: Take ten parts of the drug to be incorporated into trituration, reduce to moderately fine powder; to this add about equal bulk of sugar of milk, then by means of a spatula triturate them thoroughly together. Add fresh portions of sugar of milk until all is used, and continue to triturate until the drug is intimately mixed with sugar of milk. See *Contrition*.

Tri'tus. Contrition; trituration.

Triv'alent (*tri*, three, *valeo*, to be worth). Element having an atomicity equivalent to three atoms of hydrogen.

Tri'valve speculum, spek'u-lum. An instrument having three blades used for exploration of the vagina and cervix uteri.

Triven'ter (*tri*, *venter*, belly). Trigastric.

Trocar, tro'kar. *Trochar*. An instrument used for evacuating fluids from cavities, particularly in ascites, hydrocele, etc. It consists of a perforator or stylet and a canula, so adapted to the perforator that when the puncture is made both enter the wound with facility, after which, the stylet being withdrawn, the canula remains in the cavity and affords the fluid a ready passage outward.

Troch, troke (*trochos*, a wheel). Trochiscus.

Trochanter, tro-kan'ter (*trochao*, to run or roll). Anatomists have given the names great and small trochanter to two processes at the upper extremity of the femur. The great trochanter is the one on the outside; the small trochanter is lower down and more internal. Both afford attachment to rotator muscles of the thigh, and hence their name. Chaussier used the term trochanter for the larger and *trochantin* for the smaller process.

Trochanterian, tro-kan-te're-an. Relating to the great trochanter.

Trochan'tin. See *Trochanter*.

Trochantinian, tro-kan-tin'e-an. Relating to the trochantin or lesser trochanter.

Trochar, tro'kar. Trocar.

Troche (troke) or **Troch**, troke. See *Troches*, *Trochisci*, and *Trochiscus*.

Troches, trokes. Gummy pellets or disks made in such manner from sugar and acacia as to dissolve slowly in the mouth; used as a means of carrying medicinal agents. **T. of bicar'bonate of so'dium**, trochisci sodii bicarbonatis. **T. of bis'muth**, trochisci bismuthi. **T. of car'bonate of lime**, trochisci carbonatis calcis. **T. of cat'echu**, trochisci catechu. **T. of chalk**, trochisci carbonatis calcis. **T. of chlo'rate of pot'ash**, trochisci potassii chloratis, T. of chloride of ammonium. **T. of cu'bebs**, trochisci cubebæ. **T., escharot'ic**, trochisci escharotici. **T. of gin'ger**, trochisci zingiberis. **T., gum**, trochisci gummosi. **T. of gum ar'abic**, trochisci acaciæ. **T. of ipecacuan'ha**, trochisci ipecacuanhæ. **T. of iron, subcar'bonate of**, trochisci ferri subcarbonatis. **T. of lactuca'rium**, trochisci lactucarii. **T., lic'orice**, trochisci glycyrrhizæ. **T. of lic'orice with o'pium**, trochisci glycyr-

rhizæ cum opio. **T. of magne'sia,** trochisci magnesiæ. **T. of mor'phia,** trochisci morphiæ. **T. of mor'phia and ipecacuan'ha,** trochisci morphiæ et ipecacuanhæ. **T., ni'tre,** trochisci nitratis potassii. **T. of pep'permint,** trochisci menthæ piperitæ. **T. of san'tonin,** trochisci santonini. **T. of tan'nic acid,** trochisci acidi tannici. **T. of tartar'ic acid,** trochisci acidi tartarici.

Trochia, trok'e-a (*trochia*, the rut of a wheel). Orbit.

Trochilia, trok-il'e-ah. Trochlea.

Trochinian, trok-in'e-an. Relating to the smaller tuberosity of the humerus.

Troch'inus. The smaller tuberosities of the upper extremity of the humerus are so called.

Trochis'ci. See *Trochiscus.* **T. aca'ciæ,** *Troches* or *Lozenges of gum arabic* (acac., ℥iv; amyli, ℥j; sacchar., ℔j; rose-water, q. s. to form lozenges); to allay cough. **T. ac'idi benzo'ici** (Ph. Br.) (benzoic acid, gr. ccclx; refined sugar, ℥xxv; acacia, ℥j; mucilage of acacia, f℥ij; distilled water, q. s. to make 720 lozenges, each containing half a grain of benzoic acid). **T. ac'idi tan'nici,** *Tannic acid* or *Tannin lozenges* (U. S. Ph.) (tannic acid, gr. 100; sugar, gr. 1000; tragacanth, gr. 25; orange-flower water, q. s. to make 100 troches). The British Pharmacopœia directs that lozenges of tannic acid shall be made up with sugar, gum acacia, and tincture of Tolu, each lozenge containing tannic acid gr. ½; dose, 1 to 6 lozenges. **T. ac'idi tartar'ici,** *Troches of tartaric acid* (acid. tartaric., ℥ij; sacchar., ℥viij; ol. limon., ♏x.; form into troches with mucilage); refrigerant and demulcent. **T. ammo'niæ,** *Trochisci ammoniæ, Ammonia lozenges* (ammon. muriat., ℥iss; morphiæ muriat., gr. iij; ulmi, acaciæ, sacchar., extract. glycyrrhiz., ää ℥vij; tinct. Tolut., ℥iij; ol. gaultheriæ, gtt. iv; syrup, q. s.; to be made into lozenges). **T. ammo'nii chlo'ridi** (Ph. U. S.), *Troches of chloride of ammonium* (chloride of ammonium, gr. 200; sugar, gr. 1000; tragacanth, gr. 25; syrup of Tolu, q. s. to make 100 troches). **T. Bech'ici ni'gri,** T. glycyrrhizæ glabræ. **T. bismu'thi,** *Bismuth lozenges* or *troches* (bismuth. alb., gr. 1440; magnes. carb., ℥iv; calcis carb. præcip., ℥vj; sacchar. purif., ℥xxix; acaciæ pulv., ℥j; mucilag. acaciæ, f℥ij; aquæ rosæ, q. s.; to be divided into 720 lozenges) (Ph. Br.). **T. carbona'tis cal'cis,** *Troches* or *Lozenges of carbonate of lime* or *chalk, Lozenges for heartburn* (cret. præp., ℥iv; acaciæ, ℥j; myrist., ℥j; sacch., ℥vj; aquæ, q. s.; to be formed into troches); antacid and absorbent. **T. cat'echu** (Ph. U. S.), *Catechu lozenges* (catechu, gr. 100; sacchar., gr. 1000; tragacanth, gr. 25; aquæ aurantii flor., q. s. to make 100 troches). **T. cre'tæ** (Ph. U. S.) (prepared chalk, gr. 400; acaciæ, gr. 100; nutmeg, gr. 15; sugar, gr. 600; water, q. s. to make mass; divide into 100 troches). **T. cubeb'æ** (Ph. U. S.), *Troches of cubeb* (oleoresin of cubeb., gr. 15; oil of sassafras, gr. 15; extract of glycyrrhiza, gr. 400; acaciæ, gr. 200; syrup of Tolu, q. s. to make 100 troches); excitant; in relaxed sore throat, etc. **T. escharot'ici,** *Escharotic troches* (hydrarg. oxymur., p. 8; amyli, p. 16; mucilag. g. tragac., q. s.; make into troches, to which a few drops of laudanum may be added); used in foul ulcers to remove excrescences, etc. **T. escharot'ici de min'io** (plumbi oxid. rubr., p. 16; hydrarg. oxymur., p. 32; mic. panis, p. 128; aq. rosæ, q. s.); used like the last. **T. fer'ri** (Ph. U. S.), *Troches* or *Lozenges of iron* (hydrated oxide of iron, gr. 500; vanilla, gr. 10; sugar, gr. 1500; mucilage of tragacanth, q. s. to form 100 troches); tonic. **T. fer'ri redac'ti,** *Reduced iron lozenges* (ferri redact., gr. dccxx; sacchar. purificat., ℥xxv; acaciæ, ℥j; mucilag. acaciæ, f℥ij; aquæ destillat., f℥j or q. s.; Ph. B.). The British Pharmacopœia directs that these lozenges shall be made from reduced iron, sugar, and gum acaciæ, each lozenge containing gr. 1 of reduced iron. **T. glycyrrhi'zæ,** *Licorice troches* or *lozenges, Black pectoral lozenges* (ext. glyc. glabr., gum. acac., ää p. j; sacch. purif., p. ij); demulcent; to allay cough. **T. glycyrrhi'zæ et o'pii** (Ph. U. S.), *Licorice troches with opium, Wistar's lozenges* (extract of glycyrrhiza, gr. 200; extract of opium, gr. 5; acaciæ, gr. 200; sugar, gr. 300; oil of anise, gr. 3; to form 100 troches); demulcent and anodyne. *Spitta's lozenges* for coryza, hoarseness, and sore throat are composed as follows: Cubeb. recent. in pulv., ℥ij; extract. glycyrrhiz., ℥j; myroxyl., ℥j; acaciæ, ℥iv; syrup., q. s.; make into troches of 10 grains each. **T. gummo'si,** *Gum troches* (g. acac., p. v; amyli, p. j; sacch. pur., p. xij; aquæ rosæ, q. s.); demulcent. **T. ipecacuan'hæ** (Ph. U. S.), *Ipecacuanha lozenges, Troches of ipecac* (ipecac, gr. 25; tragacanth, gr. 25; sugar, gr. 1000; syrup of orange, q. s. to make 100 lozenges). The British Pharmacopœia directs these lozenges to be so prepared that they will contain gr. ¼ of ipecacuanha. **T. krame'riæ** (Ph. U. S.), *Troches of krameria* (extract of krameria, gr. 100; sugar, gr. 1000; tragacanth, gr. 25; orange-flower water, q. s. to make 100 troches). **T. lactuca'rii,** *Troches of lactucarium* (prepared from lactucarium in the same proportion and manner as the opium lozenges. Each lozenge contains between the fifth and sixth of a grain of lactucarium. **T. magne'siæ** (Ph. U. S.), *Troches of magnesia* (magnesia, gr. 300; nutmeg, gr. 15; sugar, gr. 900; mucilage of tragacanth, q. s. to make 100 troches); useful in acidity of the stomach with constipation. **T. men'thæ piperi'tæ** (Ph. U. S.), *Troches of peppermint* (oil of peppermint, gr. 15; sugar, gr. 1200; mucilage of acaciæ, q. s.; divide into 100 troches); used as a carminative. **T. mor'phiæ et ipecacuan'hæ** (Ph. U. S.), *Troches of morphia and ipecac, Morphia and ipecac lozenges* (sulphate of morphine, gr. 5; ipecac, gr. 16; sugar, gr. 2000; oil of gaultheria, gr. 2; mucilage of tragacanth, q. s.; divide into 100 troches); used to allay cough; anodyne. **T. morphi'næ** (Ph. Br.) (morph. hydrochlorat., gr. xx; tinct. Tolu, f℥ss; sacchar. purificat., ℥xxiv; acaciæ, ℥j; mucilag. acaciæ, q. s.; aquæ destillat., f℥ss; divide into 720 lozenges). **T. nitra'tis potas'sii,** *Nitre troches* (potassii nitrat., p. j; sacch. pur., p. iij; mucilag. tragacanth, q. s.); in slight inflammatory sore throat and fever. **T. o'pii** (extract of opium, tincture of Tolu, sugar, gum acacia, and extract of licorice). Each lozenge contains gr. $\frac{1}{10}$ of extract of opium, which, according to B. P. standard, should represent gr. $\frac{1}{50}$ of morphine. **T. pectora'les,** *Jackson's pectoral lozenges.* The following formula was proposed by the late Professor Jackson of the University of Pennsylvania: Ipecac., gr. x; antim. sulphur. præcip., gr. v; morphiæ muriat., gr. vj; acaciæ, sacchar., ext. glycyrrhiz., ää ℥xj; tinct. Tolut., ℥iv; ol. sassaf., gtt. iv; to be made with syrup into 200 lozenges, or into lozenges of ten grains each. **T. pectora'les re'gis Dano'rum,** T. glycyrrhizæ cum opio. **T. potas'sii chlora'tis** (Ph. U. S.), *Troches of chlorate of potassium* or *potassa, Chlorate of potash lozenges* (chlorate of potassium, gr. 5; sugar, gr. 1900; tragacanth, gr. 100; spirit of lemon, gr. 10; water, q. s.; divide into 100 troches); used in affections of the throat and fauces. According to the British Pharmacopœia, these lozenges are to be prepared of potassium chlorate, sugar, and gum acacia, each lozenge containing gr. v of potassium chlorate. **T. santoni'ni,** *Troches of Santonin.* These lozenges, according to British Pharmacopœia, are to be prepared with santonin, sugar, and gum acacia; each lozenge containing gr. 1 of santonin. **T. sedati'vo-balsam'ica,** T. glycyrrhizæ cum opio. **T. so'dii bicarbona'tis** (Ph. U. S.), troches of bicarbonate of sodium or soda, bicarbonate of sodium lozenges or troches (bicarbonate of sodium, gr. 300; sugar, gr. 900; nutmeg, gr. 15; mucilage of tragacanth, q. s.; divide into 100 troches). These lozenges, according to British Pharmacopœia, are to be prepared with sodium bicarbonate, sugar, gum acacia, and water; each lozenge containing gr. v of sodium bicarbonate. **T. so'dii santonina't's** (Ph. U. S.), troches of santoninate of sodium (santoninate of sodium, gr. 100; sugar, gr. 2000; tragacanth, gr. 50; orange-flower water, q. s.; divide into 100 troches); used for round worms. **T. stibia'ti,** tabellæ antimoniales Kunckelii. **T. theba'ici,** T. glycyrrhizæ cum opio. **T. zingib'eris,** *Troches of*

ginger (tincture of ginger, gr. 200; tragacanth, gr. 50; sugar, gr. 2000; tragacanth, q. s.; syrup of ginger, q. s.; divide into 100 troches).

Trochis'cus (dim. of **Trochos**, a wheel, anything circular). A troch or round table. See *Pastil* and *Tabella*. A solid medicine prepared of powders, incorporated by means of mucilage, crumb of bread, juices of plants, etc.; adapted for the purpose of allowing the medicines of which the troch is composed to dissolve slowly in the mouth and to pass gradually into the stomach. See *Trochisci*.

Trochiter, trok'it-ur (*trochao*, to turn). The greater tuberosity at the upper extremity of the os humeri, affording insertion to rotary muscles.

Trochiterian, tro-kit-e're-an. Anything belonging or relating to the trochiter.

Troch'lea (*trochao*, to turn). A pulley. **T. articula'ris**, smooth grooved surface at the end of certain bones over which its articulating fellow glides. **T. astrag'alus**, broad, smooth surface of the astragalus for articulation with the tibia. **T. cartilagin'ea**, cartilaginous portion of inferior calcaneoscaphoid ligament. **T. of the fe'mur**, continuation of condyles in front, forming a smooth surface at lower end of femur over which the patella glides. **T. humera'lis**, the articular surface at the lower extremity of the os humeri. It forms a kind of pulley on which the ulna moves in flexion and extension of the forearm. **T. labyrin'thi**, cochlea. **T. of supe'rior oblique mus'cle**, the cartilaginous pulley over which the tendon of the trochlearis muscle passes at the upper and inner part of the orbit.

Trochleæ digitorum, trok'le-e dij-it-o'rum. Fibrocartilages of the fingers.

Trochlear, trok'le-ar. Pertaining to a pulley or trochlea. **T. fos'sa**, depression in orbital surface of frontal bone for attachment of trochlea of superior oblique muscle. **T. nerve**, fourth or pathetic nerve. **T. spine**, small tubercle on orbital surface of frontal bone, to which pulley of superior oblique muscle is occasionally attached. **T. sur'face of hu'merus**, articular surface at lower end of the humerus, on which the ulna moves.

Trochlearis, trok-le-ah'ris. Obliquus superior oculi. Also, relating to the trochlea.

Trochlea'tor. Trochlear nerve.

Trochocephalous, trok-o-sef'al-us. Spherical or rounded appearance of the head, due to partial union of the parietal and frontal bones by osseous material.

Trochoginglymus, trok-o-gin'glim-us. Articulation having a pivot- and hinge-joint.

Trochoid, tro'koid (*trochos*, a wheel, *eidos*, resemblance). An articulation in which one bone turns upon another like a wheel upon its axle, as the atloido-axoid articulation.

Trochoï'des. Pivot-joint.

Trokanter, tro-kan'tur. Trochanter.

Trokante'rian. Trochanterian.

Trokantin'ian. Trochantinian.

Troll'ius lax'us. *Globeflower*, ord. Ranunculaceæ; indigenous; has the same medical properties as the ranunculus.

Tröltsch, cor'puscles of. Corpuscles imbedded between the fibres of the two layers making up the middle fibrous layer of the membrana tympani, analogous to the corpuscles of the cornea.

Trom'mer's test. A test for the presence of grape-sugar, as in urine. To the liquid to be tested add one-third of its volume of liquor potassæ and a few drops of ten-per-cent. cupric sulphate solution; boil, and, if glucose be present, a reddish-yellow turbidity appears, due to precipitation of cuprous oxide. See *Urine, examination of*.

Tromoma'nia (*tromos*, tremor, *mania*). Delirium tremens.

Tromoparanœa, tro-mo-par-an-e'ah (*tromos*, *paranoia*, mental delusion). Delirium tremens.

Tro'mos. Paralysis agitans. Tremor.

Tromospas'mus (*tromos*, *spasmos*, spasm). Tremor.

Tro'mus (*tromos*). Paralysis agitans. Tremor.

Trona, tro'nah. Native sesquicarbonate of sodium, of Egyptian or North African origin.

Tropæ'olin. Coal-tar derivative, of deep-yellow color, belonging to aniline group; used as a dye and as a test for the presence of free acid in the contents of the stomach.

Tropæolum (trop-e'o-lum) **ma'jus** (*tropaion*, a trophy, the leaves resembling a buckler). *Indian cress*, ord. Geraniaceæ. An antiscorbutic. **T. tubero'sum**, *Ulluco*, a tuberous plant, smaller than the potato, cultivated in the Sierras, Peru.

Tropeines, tro'pe-eens. Chemical compounds formed by replacement of a tropic-acid molecule by a molecule of another acid.

Trophalis, trof'al-is (*trophe*, nourishment). Colostrum.

Trophe, tro'fe. Aliment; pabulum; nourishment.

Trophesy, trof'es-e. A name proposed for the results of disorder of the nerve-force of a motor order, regulating nutrition.

Trophi, tro'fe (*trophe*, nourishment). Parts of the mouth in insects employed in receiving and preparing the food.

Trophic, trof'ik. Trophical.

Trophical, trof'ik-al (*trophe*). *Trophic.* Relating to nourishment or nutrition. **T. cen'tres**, those giving rise to trophic nerves or regulating the nutrition of nerves. **T. fi'bres**, nerve-fibres supposed to regulate nutrition of the area to which they are distributed. **T. nerves**, *Motor spinal nerves;* the organic nerves of the sympathetic system, from the belief that they are concerned in nutrition. **T. neuro'ses**, diseases supposed to be due to derangement of trophic nerves.

Trophimus, trof'im-us. Nutritious.

Trophodes, trof-o'dees (*trophe*, nourishment). Nutritious.

Trophology, trof-ol'o-je. Science of nutrition.

Trophoneuroses, trof-o-nu-ro'sees (*trophe*, nourishment, *neurosis*). Morbid conditions of the process of nutrition owing to modified nervous influence.

Trophonosi, trof-on'o-se (*trophe*, nourishment, *nosos*, disease). Diseases of nutrition.

Trophopathy, trof-op'ath-e. Disease of nutrition.

Trophoplasts, trof'o-plasts. Minute bodies situate in protoplasm; nutritional in function.

Trophy, trof'e (*trophe*, nourishment or nutrition). Suffix, as in hyper*trophy*, excess of nourishment or nutrition.

Tropic (trop'ik) **acid.** Derivative of atropine, formed by boiling with hydrochloric acid or with baryta-water.

Trop'ical chloro'sis. Anchylostomiasis.

Tropidine, trop-id'een. Product of decomposition of atropine by hydrochloric acid.

Tropine, tro'peen. Strong crystallizable mono-acid base formed by decomposition of atropine with hydrochloric acid or with baryta-water.

Troponu'si (*trope*, the solstitial or tropical point where the sun turns or alters its course, *nousos*, disease). Diseases that prevail in the tropics.

Tros'ter. See *Spirit.*

Trousseau's (troos'so's) **phenom'enon.** T.'s sign. **T.'s sign** or **symp'tom**, paroxysm artificially produced in tetanus by pressure upon the larger arteries and nerves of the arm. **T.'s spots**, red spots appearing upon the skin after mechanical irritation, due to reflex action.

Trubs. Lycoperdon tuber.

Truculentus, truk-u-len'tus (*trux*, ferocious). Homicidal.

Trudge'backed. See *Hump.*

True. Functionally perfect, having reference to organs or tissues. **T. car'tilage**, hyaline cartilage. **T. cor'pus lu'teum**, corpus luteum of pregnancy. **T. lig'aments of blad'der**, two lateral, two anterior ligaments, and remains of urachus acting as a ligament. **T. mo'lar teeth**, twelve largest teeth of permanent set. **T. pel'vis**, part of pelvic cavity situate beneath ilio-pectineal line. **T. pep'tone**, tryptone. **T. ribs**, those connected with the spine and sternum.

T. skin, corium. **T. su'ture,** one articulating by dovetails. **T. ver'tebræ,** those having individual motion throughout life. **T. vo'cal cords,** those concerned in production of voice.

True'love. Paris; Trillium latifolium.

Truffle (pron. troo'f'l). Lycoperdon tuber. **T., Hart's,** Elaphomyces granulatus.

Trum'pet creep'er. Tecoma radicans. **T. flow'er,** T. radicans. **T. hon'eysuckle,** Lonicera sempervirens. **T. leaf,** Sarracenia flava. **T. weed,** Eupatorium purpureum.

Trun'cated. Deprived of limbs.

Truncus, trunk'us. Trunk.

Trunk. The principal part of the body, to which the limbs are articulated. The trunk has been divided into three parts: a superior or head; a middle or thorax, and an inferior or pelvis. These three regions contain the great splanchnic cavities; they are united by the vertebral column. To the *middle* are articulated the superior extremities, and to the *inferior* the lower extremities. The trunk of an artery, vein, nerve, or lymphatic is its largest part, which has not yet given off branches. Also applied to the parent vessel after branches have been sent off.

Truss ([F.] *trousser,* to tie up). Instrument or hernial bandage for keeping hernia reduced. A good truss should make equable and continuous pressure on the aperture of the sac, and yield to the change of form in the abdominal parietes. The most important part of these bandages is a narrow, flat steel spring, adapted to the shape of the body. It embraces the body on the affected side, extends from beyond the spine, and terminates, opposite the ruptured part, by an iron plate, to which it is riveted. The posterior surface of this plate is furnished with a convex pad adapted in shape and size to the aperture which it has to close. The spring is covered with leather, and its inner surface is padded; a strap, pierced with numerous holes, which allows the patient to tighten or slacken it at pleasure, extends from its posterior extremity, passes round the sound side, and is attached to the plate of the pad.

Trygodes, trig-o'dees (*trux,* lees). Feculent.

Trypanon, trip'an-on. Trephine.

Trypesis, trip-a'sis (*trupao,* to bore). Trephining.

Trypsin, trip'sin. Ferment of pancreatic juice acting upon proteids and converting them into peptone and other substances. See *Ferments* and *Enzymes.*

Trypsinogen, trip-sin'o-jen. Precursor of trypsin.

Trypsis, trip'sis (*truo,* to rub). Friction.

Tryptic, trip'tik. Pertaining to trypsin.

Tryptone, trip'tone. Substance produced by action of trypsin upon proteids.

Tsaraäth. True leprosy, so called by the Jews.

Tsa-tsin. Rhynchosia excavata.

Tscherbet, shur-bet'. Sherbet.

Tsetse. Glossina morsitans.

T-shaped bron'chi. Bronchi bifurcating at nearly right angles to the bronchus from which they arise.

Tsiana, se-an'ah. Costus.

Tsitla, sit'la. S. African root of the Araceæ family, containing a large quantity of sweet-tasted starch; not an unpleasant article for food.

Tsjampaca. Michelia champaca.

Tu'ba (a trumpet). Tube. **T. acus'tica,** Eustachian tube. **T. Aristotel'ica,** Eustachian tube. **T. cæ'ca,** Fallopian tube. **T. Eusta'chii,** Eustachian tube. **T. Fallopia'na** or **uteri'na,** Fallopian tube. **T. voca'lis,** vocal tube.

Tu'bage. See *Catheterismus.*

Tu'bal. Relating to a tube or tubes, and especially to the Fallopian tube. **T. drop'sy,** salpingian or Fallopian dropsy. **T. nephri'tis,** kidney, Bright's disease of the. **T. preg'nancy,** see *Pregnancy, tubal.* **T. respira'tion,** see *Murmur, respiratory.*

Tub'boe. Form of frambœsia or yaws attacking the feet.

Tube. Name given to parts or canals which are hollow, having at times the shape of a trumpet. **T., alimen'tary,** see *Canal, alimentary.* **T., aud'itory,** see *Auditory canal, external.* **T. casts,** microscopic casts or moulds of uriniferous tubes of kidney, observed in diseases of those organs. **T. c., blood,** those having blood-corpuscles entangled in coagulated fibrin. **T. c., epithe'lial,** those having epithelium entangled in albuminoid exudate. **T. c., fatty,** tube casts, oily. **T. c., gran'ular,** those composed of granular débris of degenerated epithelium or blood-cells. **T. c., hy'aline,** structureless, transparent, gelatinous moulds probably formed of coagulated fibrin. **T. c., mu'cous,** moulds of uriniferous tubule composed of mucus; not indicative of organic disease of kidney. **T. c., oily** or **fatty,** those loaded with oil drops, either free or in epithelial cells. **T. c., wax'y,** hyaline casts resembling molten wax. **T. of the coch'lea,** see *Scalæ of the cochlea.* **T., drain'age,** perforated rubber tube introduced into wounds for the purpose of removing septic matter. **T., drain'age, decal'cified,** shaft of certain bones having the bone salts removed, used as a drainage-tube. **T., enterot'omy,** tube employed to prevent prolapse of the intestine after colotomy. **T., Eusta'chian,** see *Eustachian.* **T., Fallo'pian,** *Oviduct, Uterine tubes, Vector canal;* a canal lined with columnar ciliated epithelium situate in free margin of the broad ligament, extending from each superior angle of uterus to sides of brim of pelvis. Each tube is four or five inches in length; its canal is very minute, hardly admitting a fine bristle; near the uterus it is straight and very narrow, but in its course, widening, becomes tortuous, and terminates by a free expanded and fimbriated extremity. One of the fimbriæ is connected with the outer end of the ovary. These tubes establish a communication between the cavity of the peritoneum and that of the uterus, the abdominal termination being called *Ostium abdominale, internum,* or *oäricum;* the uterine, *Ostium uterinum, Apertura uterina.* When the tube embraces the ovary a funnel-shaped cavity—*carolla infundibuliformis*—is formed at its extremity, into which the ovule passes and is transmitted to the uterus. **T., intes'tinal,** canal, alimentary. **T., intuba'tion,** tube introduced into the larynx during the operation of intubation. **T., lithot'omy,** T., perineal. **T., œsophage'al,** *Stomach tube;* a long elastic gum tube, capable of being passed into the œsophagus or stomach. **T., perine'al,** tube introduced, for the purpose of drainage, through the wound into the bladder after perineal section. **T., pol'len,** see *Pollen.* **T., rec'tal,** *Defecation tube;* an elastic gum tube, similar to the stomach tube, which is sometimes passed into the colon, to remove air from that intestine or to enable enemata to be thrown up into it. **T., stom'ach,** see *Tube, œsophageal.* **T., trache'al,** tube which is inserted into the trachea after tracheotomy, usually consisting of a canula within a canula, the inner of which may be removed and cleansed, while the outer retains its position. **T., u'terine,** T., Fallopian. **T., vo'cal,** the part of the air-passages above the inferior ligaments of the larynx, including the passages through the nose and mouth.

Tu'ber (a bump or protuberance). Hump; tubercle. Fleshy stem or root-stock, usually containing starchy matter. **T. annula're,** pons Varolii. **T. atlo'ido-occipita'le,** rectus capitis posticus minor. **T. cal'cis,** the posterior extremity of the os calcis. **T. cervi'num,** Elaphomyces granulatus. **T. ciba'rium,** Lycoperdon tuber. **T. cine'reum,** a grayish tubercle, seen at the base of the brain behind the commissure of the optic nerves, which is continuous with the infundibulum. **T. cor'poris callo'si,** see *Corpus callosum.* **T. fronta'le,** frontal protuberance. **T. guloso'rum,** Lycoperdon tuber. **T. gutturo'sum,** bronchocele. **T. is'chii,** see *Ischiatic.* **T. ischiotrochante'rium,** quadratus femoris. **T. maxil'læ,** tuberosity of superior maxillary bone. **T. ni'grum,** Lycoperdon tuber. **T. olfacto'rium,** olfactory tubercle. **T. omenta'le hep'atis,** tubercle on superior border of the lobe of liver opposite to upper curvature of stomach. **T. omenta'le pancrea'tis,** prominence on pancreas corresponding to lesser omentum. **T. parieta'le,** see *Parietal bones.* **T. pell'agræ,** pellagra. **T. tym'pani,** promontory of the tympanum. **T. val'vulæ,** short commissure.

Tu'bera ter'ræ. Lycoperdon tuber.

Tubercle, tu'ber-k'l. *Tuberculous deposit;* a *Kernel,* a *Knot.* Tumor in the substance of organs from the production of new matter; sensation null; growth sluggish. In pathological anatomy the term is generally given to well-defined, roundish, non-vascular nodules which may reach the size of millet-seed, presenting at the periphery numbers of round cells like leucocytes, nearer the centre larger cells often called epithelioidal cells, and in more central parts one or more giant cells having numerous nuclei; the central part may appear opaque, due to caseous necrosis. The presence of these bodies in a tissue constitutes the condition of *Tuberculosis, Tuberculization, Tuberculous disease, Morbus tuberculosis, Strumosis, Phymatosis pulmonum,* or *Dyscrasia tuberculosis.* Tubercles may occur symmetrically in diverse organs as minute globular bodies, giving rise to a condition called *Miliary tuberculosis,* or as larger unsymmetrical lesions known as *Local tuberculosis.* There is usually a tendency to apposition of tubercles, with formation of larger nodules, which finally undergo cheesy necrosis, and it is then known as yellow tubercle in contradistinction to gray tubercle, which it is first called. Yellow tubercles tend to undergo liquefaction necrosis, and if possible to be discharged; if on external parts, an ulcer may be formed; if in interior organs, a cavity results. Occasionally connective tissue is formed in these tubercles which holds cheesy material in its meshes. This is called fibrous tubercle. Tuberculosis is a form of inflammation resulting in an attempt of the system to eliminate the *bacillus tuberculosis.* This being difficult, a chronic inflammation results, with first a tendency to regeneration, but which later, on account of poor blood-supply, terminates in degeneration. The first evidence of degeneration is a peculiar form of karyokinesis in which nuclei of round cells divide and form giant cells. Next follows coagulation necrosis in the giant cells, which later become cheesy. Tuberculosis is primarily a local disease, but may become general, involving all of the organs of the body. The lesions may become generalized in several ways: extension by continuity and contiguity, by lymph-paths, by blood, or by transmission through the agency of the fluids of the body. For description of the specific cause see *Bacillus tuberculosis.* Anatomically, a tubercle is a small prominence or projection usually on the surface of a bone.

Tu'bercle, adduc'tor. Termination of the inner supracondylar line of the femur. **T., anatom'ical,** verruca necrogenica. **T., black,** melanosis. **T., can'cerous, of the face,** lupus. **T., carot'id,** anterior tubercle of the sixth vertebra. **T., Chas'saignac's,** anterior tubercle of sixth vertebra. **T. of clav'icle,** conoid tubercle; rough eminence surmounting coracoid process of scapula and giving attachment to conoid ligament. **T., co'noid,** tuberosity on posterior border of clavicle; see *T. of clavicle.* **T. of cu'boid,** eminence with convex facet for articulation with sesamoid bone in tendon of peroneus longus. **T., del'toid,** rough surface on anterior portion of clavicle. **T. of fe'mur,** prominence projecting from upper and front part of neck of femur at junction with great trochanter. **T., gen'ital,** see *Genital.* **T., infraglen'oid,** rough ridge beneath the glenoid fossa of the scapula. **T., lac'rymal,** rough surface on the superior maxillary bone. **T., lam'inated, of cerebel'lum,** nodule at anterior pointed termination of inferior vermiform process. **T., Lis'franc's,** T., scalene. **T. of Low'er,** see *Lower, tubercle of.* **T., mam'millary,** see *Mammillary eminence.* **T., men'tal,** rough surface on the body of the lower jaw. **T., mu'cous,** see *Condyloma.* **T., ob'turator,** two tubercles, inferior and superior, limiting the obturator groove of the pubic bone. **T., op'tic,** quadrigemina tubercula. **T., pain'ful subcuta'neous,** see *Neuroma.* **T., pharynge'al,** rough surface on basilar process of the occipital bone for attachment of superior constrictor muscle of the pharynx. **T., pter'ygoid,** tubercle situate to the inner side of, and below, the Vidian canal on the sphenoid bone. **T. of the quadra'tus,** rough surface on great trochanter of femur for attachment of quadratus muscle. **T. of the ra'dius,** rough surface for the extensor secundi internodii pollicis. **T. of rib,** eminence on posterior surface of the rib at junction of neck with shaft. **T. of Rolan'do,** tubercle formed by the blending of the lateral crescentic portions of the gray matter of the medulla oblongata with the fibres of the corpora restiformia. **T., scalene',** rough impression on first rib for scalenus anticus muscle. **T. of scaph'oid of car'pus,** eminence giving attachment to anterior annular ligament of wrist. **T. of scaph'oid of tar'sus,** eminence giving attachment to part of tibialis posticus. **T., supraglen'oid,** tubercle situate above the glenoid cavity of the scapula, for the long head of the biceps. **T. of tib'ia,** oblong elevation on anterior surfaces of tuberosities of tibia. **T. of ul'na,** prominence on coronoid process of ulna giving attachment to oblique ligament. **T. of zygo'ma,** projection on anterior root giving attachment to external lateral ligament of jaw.

Tu'bercles of the are'ola. See *Mamma.* **T., creta'ceous,** see *Cretaceous.* **T., ge'nial,** prominent elevations on internal surface of symphisis of inferior maxilla. **T., mil'iary,** see *Tubercle.* **T., pearl'y,** *Sebaceous miliary tubercles, Follicular elevations;* small collections of sebaceous matter in the sebaceous glands of ducts, often seen in the thin skin of the lower eyelids, sometimes attaining an inconvenient size. **T., seba'ceous mil'iary,** T., pearly.

Tubercula (tu-bur'ku-lah) (pl. of **Tuberculum**) **Aran'tii.** *Tubercles of Arantius* or *Aranzi.* Small eminence at the middle part of the convex edge of the semilunar valves of the pulmonary artery and aorta. **T. are'olæ,** see *Mamma.* **T. arthrit'ica,** calculi, arthritic. **T. cer'ebri,** tubercles of the brain. **T. doloro'sa,** small subcutaneous painful tumor on the nerves of the skin, chiefly about the joints; see *Neuroma.* **T. gonorrho'ica,** gonorrhœa impura. **T. gumma'ta,** see *Gumma.* **T. hep'atis,** tubercles of the liver. **T. intestino'rum,** tubercles of the intestines. **T. mammilla'ria,** see *Mammillary eminence.* **T. nervo'rum nodo'sa,** nervous ganglions. **T. par'va du'ræ ma'tris,** glandulæ Pacchioni. **T. peritonæ'i,** tubercles of the peritonæum. **T. pulmo'num,** see *Phthisis pulmonalis.* **T. quadrigem'ina,** quadrigemina tubercula.

Tubercular, tu-bur'ku-lar. *Tuberculous, Tuberculate, Tuberculated.* Relating to tubercles or that formed by tubercles. **T. bacil'lus,** see *Bacillus tuberculosis.* **T. constitu'tion** or **diath'esis,** habit of body predisposing to tubercular phthisis. *Tubercular* or *Tuberculous cachexia, Tuberculosis, Morbus tuberculosus, Dyscrasia tuberculosa,* is the constitutional condition of one affected with tubercles. **T. disease of the foot,** fungus foot. **T. mat'ter,** tubercle. **T. phthi'sis,** form of tuberculosis produced by the development of tubercles in the lungs.

Tuberculate, tu-bur'ku-late. Tubercular. **T. sarco'ma of Ab'ernethy,** tubercles firm, round, and clustering; pea-sized; yellowish or brownish-red; when large disposed to ulcerate and produce a painful, malignant, and often fatal sore. Found chiefly in the lymphatic glands of the neck; often simultaneously in other glands and organs.

Tuber'culated. Tubercular. **T. liv'er,** cirrhosis.

Tuber'culin. *Koch's lymph.* Yellowish liquid, glycerin extract of the cultures of the tubercle bacillus, suggested by Prof. Robert Koch, and used in diagnosis of tuberculosis and as a remedy for tuberculosis of the lungs, joints, etc., being injected in weak solution, as one per cent., with all necessary precautions as to sterilizing, etc. See *Bacillus tuberculosis.*

Tuberculi'num. Tuberculin.

Tuberculitis, tu-bur-ku-le'tis. Inflammation of tubercle or of tubercular masses.

Tuberculization, tu-bur-ku-li-za'shun. See *Tubercle.*

Tuberculize, tu-bur'ku-lize. To become tubercular.

Tuberculo cinereo. Tubercle of Rolando.

Tuberculoci'din. Proposed by Klebs as a substitute for tuberculin, being a preparation of the albu-

mose, which he considers the active material in tuberculin.

Tuberculosis, tu-bur-ku-lo'sis. See *Tubercle* and *Tubercular cachexia.* **T., dissem'inated,** see *Disseminated.* **T. laryn'gis et trache'æ,** phthisis laryngea. **T. pulmo'num,** phthisis pulmonalis. **T. vertebra'rum,** vertebral disease.

Tuberculotic (tu-bur-ku-lot'ik) or **Tuber'culous,** tu-ber'ku-lus. Tubercular. **T. depos'it,** tubercle. **T. disease,** see *Tubercle.* **T. disease of the lungs,** phthisis pulmonalis. **T. dust,** fine white or yellow minute points of tuberculous matter, occurring in profusion like dust.

Tuberculum, tu-bur'ku-lum (dim. of **Tuber**). Tubercle. **T. adeno'sum,** molluscum contagiosum. **T. atlan'tis anti'cum,** prominence on anterior arch of atlas, giving attachment to longus colli muscle. **T. atlan'tis posti'cum,** prominence on posterior arch of atlas, taking place of spinous process of other vertebræ. **T. calca'neum,** tubercle of calcaneum. **T. capit'uli fib'ulæ latera'le,** prominence on head of fibula giving rise to peroneus longus. **T. carot'icum,** carotid tubercle. **T. cartilag'inis thyroï'deæ,** triangular prominence at upper border of thyroid cartilage. **T. cauda'tum,** caudate lobe of liver. **T. cine'reum,** a mass of cineritious substance at the top of the calamus scriptorius; continuous with same substance in the cord, and on the sides with the corpus restiforme. **T. col'li fem'oris infe'rius,** tubercle of femur. **T. col'li fem'oris supe'rius,** prominence at upper end of intertrochanteric line. **T. cos'tæ,** costal tubercles. **T. cunea'tum,** protuberence in median cuneate funiculus of medulla oblongata. **T. deltoï'deum,** deltoid tubercle of clavicle. **T. ephip'pii,** olivary body. **T. epiglot'tidis,** eminence on epiglottis. **T. exter'num hu'meri,** greater tuberosity of humerus. **T. exter'num mandib'uli,** prominence on inferior border of lower jaw. **T. fas'ciæ denta'tæ,** prominence in fascia dentata. **T. fib'ulæ,** styloid process of fibula. **T. ileopectine'um,** pubic spine. **T. il'ii ante'rius i'mum,** eminence occasionally found on upper surface of ilium, which forms a groove with the ileopectineal prominence for passage of femoral vessels. **T. im'par,** small elevation from which the tongue develops, appearing about fifth week of embryonal life, behind the inferior maxillary arch. **T. inter'num,** lesser tuberosity of humerus. **T. jugula're,** jugular tubercle. **T. la'bii superio'ris,** teat-like projection in middle of upper lip in nursing babies. **T. lacryma'le,** see *Lacrymal puncta.* **T. latera'le ta'li** or **media'le ta'li,** small eminence on posterior border of astragalus bounding sides of groove for flexor longus pollicis. **T. linea'rum,** ridge below the occiput from which proceed inferior curved lines. **T. Lisfranc'i,** tubercle on first rib, giving attachment to scalenus anticus. **T. Low'eri,** tubercle of Lower. **T. ma'jus,** greater tuberosity of humerus. **T. mandibula're,** articular eminences of inferior maxillary bone. **T. menta'le inter'num,** genial tubercle. **T. mi'nus,** lesser tuberosity of humerus. **T. olfacto'rium,** olfactory tubercle. **T. os'sis cuboï'dei,** tubercle of cuboid. **T. os'sis il'ii ante'rius i'mum,** iliopectineal spine. **T. os'sis multan'guli majo'ris,** ridge on trapezium bounding externally groove for tendon of flexor carpi radialis. **T. os'sis navicula'ris,** tubercle on palmar surface of scaphoid. **T. os'sis pu'bis,** spine of pubis. **T. papilla're,** papillary tubercle of liver. **T. pharynge'um,** the tubercle from which springs the medial band connecting the pharynx with the occipital bone. **T. poste'rius** or **posti'cum,** greater tuberosity of humerus. **T. pros'tatæ,** middle lobe of prostate. **T. pu'bicum** or **pu'bis,** pubic spine. **T. Rolan'di,** tubercle of Rolandi. **T. Santorinia'num,** small eminences made by cartilages of Santorini in the larynx. **T. scale'ni,** scalene tubercle. **T. seba'ceum,** milium. **T. sel'læ,** olivary body. **T. spino'sum,** spinous process of spheno-maxillary bone. **T. supe'rius,** mammillary processes. **T. supracondyloï'deum exter'num** and **media'le,** external and internal supracondyloid tubercle. **T. supracotyloï'deum,** prominence at junction of acetabular margin and anterior border of ilium. **T. supratrag'icum,** small cartilages occasionally entering into formation of the tragus. **T. vagi'næ,** prominence on anterior wall of vaginæ. **T. Wrisbergia'num,** whitish elevations on inner surface of aryteno-epiglottidean fold produced by cartilages of Wrisberg.

Tuberos'itas. Tuberosity. **T. tym'pani,** promontory of the tympanum.

Tuberosity, tu-ber-os'it-e (*tuber,* protuberance). An eminence or process, the surface of which is unequal and rough, giving attachment to muscles or ligaments. **T., bicip'ital,** rough surface below the neck of the radius for insertion of biceps muscle. **T., cos'tal,** rough impression on inferior surface of clavicle for rhomboid ligament. **T., great,** thick projection from external surface of shaft of the humerus. **T., il'iac,** T. on the ilium for sacro-iliac ligament. **T. of is'chium,** a prominence on the ischium continued forward into the ramus. **T. of pal'ate,** T., pyramidal. **T., pubo-ischiat'ic,** rough surface at junction of rami of pubis and ischium. **T., pyram'idal,** tuberosity between the pterygoid plates of the palate-bone. **T. of scaph'oid,** tuberosity on scaphoid bone for insertion of tibialis anticus. **T., scap'ular,** conoid tubercle. T., **small,** tuberosity on the humerus separated from the great tuberosity by the bicipital groove. **T. of superior maxil'la,** tuberosity on posterior surface of superior maxillary bone. **T. of tib'ia,** two tuberosities, internal and external, on the superior extremity of the tibia. **T. of trape'zium,** ridge on anterior surface of that bone for the annular ligament. **T., ul'nar,** ridge at the angle of junction of the coronoid process with the shaft of the ulna.

Tubes of Belli'ni. See *Uriniferous tubes.* **T. of Ferrein',** see *Uriniferous tubes.*

Tu'bi (pl. of **Tubus,** tube) **membranacei,** membran-as'a-e. See *Villous membranes.*

Tu'biform. Having the shape of a tube.

Tu'bing. See *Drainage-tubes* and *Intubation.*

Tubo-abdom'inal preg'nancy. See *Pregnancy.*

Tubo-ova'rian preg'nancy. See *Pregnancy.*

Tubo-u'terine preg'nancy. See *Pregnancy.*

Tu'bula medulla'ris. Medullary tubule of kidney.

Tu'bular. Relating to or having the form of a small tube. Applied to glands—*Glandulæ tubulosæ*—having the shape of small tubes. Also applied to the primary nervous and muscular tissues. **T. blow'ing sound,** see *Murmur, respiratory.* **T. neu'rine,** see *Neurine.* **T. sub'stance of the kid'ney,** see *Kidney.*

Tu'bule (dim. of **Tubus,** tube). A small tube.

Tu'buli (pl. of **Tubulus**) **Belli'ni.** Uriniferous tubes. **T. contor'ti,** see *Uriniferous tubes.* **T., den'tal,** dental tubuli. **T. du'ræ ma'tris,** sinuses of the dura mater. **T. Ferrei'ni,** see *Uriniferous tubes.* **T. galactoph'ori,** see *Lactiferous vessels.* **T. lactif'eri,** see *Lactiferous vessels.* **T. Morgag'nii,** see *Prostate.* **T. ner'vei,** nerve-fibres. **T. pel'vis re'num,** see *Calix.* **T. rec'ti,** see *Rete testis* and *Uriniferous tubes.* **T. semicircula'res membrana'cei,** see *Semicircular canals.* **T. semina'les,** see *Testicle.* **T. seminif'eri rec'ti,** see *Rete testis.* **T. urinif'eri Belli'ni,** uriniferous tubes.

Tubulo'sus. Tubular.

Tu'bulus (dim. of **Tubus,** tube). Canula; tubule. **T. centra'lis modi'oli,** see *Tractus spiralis foraminulentus.* **T. col'ligens,** collecting tubule. **T. conjuncti'vus,** conjunctival tubule. **T. intercala'ris,** distal convoluted tubule of kidney. **T. laqueifor'mis,** descending loop-tube of Henle. **T. spira'lis modi'oli,** see *Tractus spiralis foraminulentus.*

Tu'bus. Tube. **T. acus'ticus,** ear-trumpet. **T. alimenta'rius** or **ciba'rius,** alimentary canal. **T. digesto'rius** or **digesti'vus,** part of intestinal tract below cardiac end of stomach. **T. ingesto'rius,** part of alimentary tract above cardiac end of stomach. **T. intestino'rum,** alimentary canal. **T. nervo'rum,** neurilemma. **T. pollin'icus,** see *Pollen.* **T. prox'imus convolu'tus,** wide canal formed by urinary tubes of the kidney. **T. vermicula'ris cæ'ci,** appendix vermiformis cæci.

Tuck'aho. Lycoperdon tuber.

Tucum (tu'kum) **oil.** Oil obtained from fruit of Astrocaryum vulgare.

Tuf'nell's meth'od. Treatment of aneurism by means of dry diet and absolute rest.

Tuft, Malpig'hian. Collection of tubular vessels in the kidney.

Tulbag'hia allia'cea. S. African plant, ord. Asphodeleæ, the bulbs of which, boiled in milk, are recommended in phthisis and as an anthelmintic. T. cepacea and T. violacea serve the same purpose.

Tu'lip, Cape. Homeria collina. **T. tree,** liriodendron.

Tulipif'era lirioden'dron (*tulipa*, tulip, *fero*, to bear). Liriodendron tulipifera.

Tul'ly's pow'der. Pulvis morphinæ compositus.

Tul'pius, valve of. Bauhin, valve of.

Tumefactio, tu-me-fak'she-o (*tumeo*, to swell, *facio*, to make). Swelling. **T. mol'lis,** puffiness.

Tumefac'tion. Swelling; puffiness.

Tumenol, tyu'men-ol (from *bitumen*). Allied to ichthyol and derived from mineral oil; dark acid syrup, employed in eczema and pruritus in tincture, ointment, plaster, powder, etc.

Tumes'cence. Process or act of swelling.

Tumescentia (tu-mes-sen'she-ah) **pituito'sa** (*tumesco*, to swell). Dropsical habit. Anasarca; œdema.

Tu'mid. Swollen; enlarged.

Tumid'ity. State of being swollen or puffed up.

Tu'mor (*tumeo*, to swell). Circumscribed enlargement of a part due to the presence of a morbid growth. The following (by Beach) is a conveniently arranged table of the

Classification of Tumors According to the Physiological Type:

Histoid or Connective-tissue Tumors.

Physiological type.	
Fibrillar connective tissue	Fibroma.
Mucous tissue	Myxoma.
Embryonal connective tissue	Sarcoma.
Endothelial cells	Endothelioma.
Adipose tissue	Lipoma.
Cartilage	Chondroma.
Bone	Osteoma.
Neuroglia-cells	Glioma.
Lymphoid tissue	Lymphoma.

Muscle-tissue Tumors or Myomata.

Physiological type.	
Smooth-muscle tissue	Leiomyoma.
Striated-muscle tissue	Rhabdomyoma.

Vascular-tissue Tumors or Angiomata.

Physiological type	
Blood-vessels	Angioma.
Lymphatic vessels	Lymphangioma.

Epithelial Tumors.

Physiological type.	
Nerve-tissue	Neuroma.
Skin and mucous membrane	Papilloma.
Glands	Adenoma.
Various forms of epithelial cells and associated tissue.	Carcinoma.

Another arrangement may be made of tumors, upon a *histological classification* based upon the resemblance of every tumor to some normal tissue, adult or embryonic (Green):

Classification of Tumors According to their Histological Character.

Mesoblast.

Type of Fully-developed Connective Tissues.

Type of		
fibrous tissue		Fibroma.
"	mucous tissue	Myxoma.
"	adipose tissue	Lipoma.
"	cartilage	Chondroma.
"	bone	Osteoma.
"	lymphoid tissue	Lymphoma.

Type of Embryonic Connective Tissue.

The varieties of Sarcoma.

Type of Higher Tissues.

Type of		
muscle		Myoma.
"	nerve	Neuroma.
"	blood-vessels	Angioma.
"	lymphatic vessels	Lymphangioma.

Type of Epithelial Tissues.

Epiblast and Hypoblast	Papillæ of skin or mucous membrane	Papilloma.
	Glands	Adenoma.
		Carcinoma.

Teratomata or Congenital Mixed Tumors.

Cysts are omitted in this group, under the view entertained by the author quoted that the great majority of cysts are not tumors.

General Classification of Tumors.

Another classification may be quoted, which presents the subject of morbid growths in a different grouping (Gant):

Cysts.
- Simple or barren:
  - Serous. Sanguineous. Synovial.
  - Mucous. Oily. Colloid. Seminal.
- Proliferous:
  - Cystigerous. Glandular. Cutaneous. Dentigerous.

Cystic tumors—*e. g.* fibrous. Cartilaginous.

Connective-tissue tumors:
- Fatty tumor.—Lipoma.
- Fibro-cellular tumor:
  - Painful subcutaneous tubercle. Neuroma.
  - Glioma. Myxoma. Lymphoma. Cylindroma. Psammoma.
- Fibrous tumor:
  - Fibro-calcareous. Fibro-cystic.
- Cartilaginous tumor.—Enchondroma:
  - Fibro-cartilaginous. Ossific. Mixed with other growths.
- Vascular or erectile tumors.—Angioma:
  - Nævus.—Telangeiectasis.
  - Aneurism by anastomosis.
- Osseous tumors. Exostoses.

Embryonic or rudimentary connective-tissue tumors:
- Sarcomata.
  - Round-celled.
  - Spindle-celled.
  - Giant-celled.
  - Mixed-celled.
  - Differential forms of sarcoma.

Epithelial-celled tumors:
- Glandular tumors. Adenoma.
- Papillary growths. Corns. Horns. Warts. Condyloma.
- Cancer:
  - Encephaloid. Varieties.—Villous. (Melanotic. Fungus hæmatodes.)
  - Scirrhus. Varieties.—Osteoid.
  - Colloid. Varieties.
  - Cystic cancer.
  - Epithelial cancer:
    - Squamous epithelioma.
    - Columnar epithelioma.

T., ad'enoid, adenoma. **T. adipo'sus,** lipoma. **T. al'bus,** hydrarthrus. **T., anom'alous,** hæmatodes fungus. **T., benign',** tumor of slow growth, usually limited in size and encapsulated, approximating in structure normal tissue, having tendency neither to recur after removal nor to give metastasis. **T., bu'tyroid,** see *Butyroid.* **T. cap'itis sanguin'eus,** cephalæmatoma. **T. car'neus,** sarcoma. **T. cartilagino'sus,** chondroma. **T., cav'ernous,** *Telangiectatic tumor;* tumor having a loosely reticulated structure resembling the corpora cavernosa of the penis. **T., cel'lular,** tumor occurring in cellular tissue which does not contain fat. **T., cellulofi'brous,** tumor, fibrocellular. **T. cheloï'des,** see *Cancroid.* **T., col'loid,** tumor containing colloid material. **T. cys'ticus,** an encysted tumor. **T. cys'ticus sero'sus,** hygroma. **T., dendrit'ic,** warty growth having a number of branches. **T. desmoï'des,** fibrous tumor. **T., dilata'tion,** retention cyst. **T., epithe'lial,** see *Epithelial.* **T., erec'tile,** tumor composed of a soft, vascular tissue which is susceptible of elevation and depression; see *Erectile.* **T., fat'ty,** lipoma. **T. fibro-adipo'sus,** tumor, fibro-fatty. **T., fibrocalca'reous,** fibrous tumor containing earthy matter. **T., fibrocel'lular,** *Cellulofibrous tumor;* soft and elastic form of fibrous tumor. **T. fibrocellulo'sus,** tumor, fibrocellular. **T., fibrocys'tic,** fibrous tumor containing cysts. **T., fibro-fat'ty,** fibrous tumor containing fat. **T., fibromus'cular,** see *Myoma.* **T. fibromusculo'sus,** see *Myoma.* **T., fibronu'cleated,** tumor composed of fibrous tissue mixed with elongated nuclei. **T. fibronucleo'sus,** tumor, fibronucleated. **T., fibroplas'tic,** sarcoma, myeloid. **T. fibro'sus,** tumor, fibrous. **T. fibro'sus recur'rens,** see *Tumor, fibrous.*

T., fi'brous, *Desmoid tumor, Fibrous growth, Fibroma, Fibroid, Tumor fibrosus;* tumor or growth formed of fibrous tissue. When recurring after repeated removal, the term *Recurrent fibroid, Sarcoma fusocellulare, Tumor fibrosus recurrens,* is applied to it. **T. fico'sus,** ficus. **T., flat,** *Flat tabular swelling;* tumor having slightly elevated broad, flat surface. **T. flatulen'tus,** emphysema. **T., float'ing,** movable mass in the abdomen, about the size and shape of the kidney. It may be a movable kidney or a loosely attached ovarian cyst, collection of fæces, etc. **T. fu'gax,** a swelling that appears and disappears soon afterward. **T., fun'gating,** see *Fungating.* **T. fungo'sus artic'uli,** spina ventosa. **T. fungo'sus sanguin'eus,** hæmatodes fungus. **T., fun'gous,** *Cauliflower excrescence;* tumor having a short, thick neck or pedicle. **T. ganglifor'mis,** ganglion, nervous. **T. gena'rum,** meloncus. **T. ge'nu al'bus,** white swelling of the knee. **T. glan'dulæ parotide'æ,** swelling or tumor of the parotid. **T., gland'ular,** tumor growing in or near a gland, and resembling it in structure; see *Adenoma.* **T. glandulo'sus,** tumor, glandular. **T., granula'tion,** see *Granulation.* **T., gum'matous,** gumma. **T., gum'my,** gumma. **T., hard,** term applied to tumors of hard consistence. **T., his'tioid,** see *Sarcoma* and *Histioid.* **T., in'filtrating,** tumor devoid of distinct line of demarcation between itself and healthy tissue. **T. lac'teus,** galactocele. **T., lam'inated na'creous fat'ty,** cholesteatoma. **T. lar'deus,** steatoma. **T., leucæ'mic** or **leukæ'mic,** lymphoma. **T., lymph'oid,** lymphoma. **T. mala'rum,** meloncus. **T., malig'nant,** tumor of rapid growth, without limit as to size, differing in structure from surrounding tissue which it infiltrates, and whose tendency is destructive. **T., med'ullary,** tumor of soft consistence due to excess of cellular over connective tissue. **T., mil'iary,** minute circumscribed growth, usually of secondary rather than primary growth. **T., milk'-like,** encephaloid. **T., mixed,** tumor composed of more than one kind of tissue —the fibromuscular, for example. **T., mu'cous,** myxoma. **T., mus'cular,** see *Fantom myoma.* **T. myelo'des,** see *Myeloid.* **T., myelogen'ic,** see *Myelogenic.* **T., nerve,** neuroma. **T., neural'gic,** tumor which, without perceptible reason, is the seat of neuralgic pain. **T., or'ganoid,** tumor following the type of organ in that it is composed of more than one tissue—cancer. **T., os'seous,** see *Exostosis.* **T. ova'rii,** ovarian tumor. **T., pap'illary,** papilloma. **T. parot'idis,** tumor or swelling of the parotid gland. **T., pearl'y,** cholesteatoma. **T., phan'tom,** see *Fantom.* **T., pol'ypoid** or **pedic'ulated,** tumor having a long, narrow pedicle. **T. pros'tatæ,** swelling or tumor of the prostate gland. **T., pul'sating,** tumor having pulsation due to state of intramural blood-vessels, independently of its proximity to large vessels. **T. rena'lis,** tumor of the kidney. **T., reten'tion,** retention cyst. **T., sand,** psammoma. **T., sanguin'eous,** hæmatocele, pelvic. **T. sanguin'eus,** hæmatoma. **T., sarcom'atous,** see *Sarcoma.* **T., scir'rhous,** tumor having hard consistence due to excess of connective over cellular tissue. **T., seba'ceous,** see *Sebaceous.* **T., soft,** term applied to tumor of soft consistence. **T. squamiform'is carno'sus,** a fleshy tumor covered with scales. **T., sys'temoid,** see *T., teratoid.* **T., tar'sal,** chalaza. **T., telangiecta'tic,** see *T., cavernous.* **T., ten'dinous,** see *Tendinous.* **T., ter'atoid,** tumor made up of a number of tissues resembling an organ or system of organs—dermoid cyst. **T., transit'ion,** recurrent tumor having a disposition to assume a more malignant form. **T. tuberculo'sus,** tuberculate sarcoma. **T. tunica'tus,** an encysted tumor. **T. u'teri,** tumor of the uterus. **T., var'icose,** circumscribed, bluish tumor, formed by the dilatation and turgescence of the capillary vessels of a part. **T., vas'cular,** see *Hæmorrhois, Nævus,* and *Angioma.* **T., vas'cular, of ure'thra,** see *Urethra.* **T. vasculo'sus,** angioma. **T. villo'sus,** papilloma. **T., wart'y, of cica'trices,** see *Warty tumor.*

Tumul'tus cor'dis. Irregularity of action of the heart. **T. sermo'nis,** stuttering method of reading.

Tun'belly. Physconia.

Tun'da oc'uli. Conjunctival membrane.

Tun'dus cor'dis. Apex of the heart.

Tun'ga. Chique.

Tunic, tu'nik. Envelope. A name given to different membranes which envelop organs, as the tunics or coats of the eye, stomach, bladder, etc. See *Tunica.*

Tunica, tu'nik-ah. Tunic. **T. abdomina'lis,** deep layer of superficial fascia of quadrupeds. **T. acina'lis,** uvea. **T. acinifor'mis,** uvea. **T. acino'sa,** uvea. **T. adipo'sa re'num,** fatty investment of kidney. **T. adna'ta,** conjunctiva; also applied to visceral portion of tunica vaginalis testis. **T. adventit'ia,** see *Artery.* **T. agna'ta,** conjunctiva. **T. al'ba oc'uli,** sclerotic. **T. albugin'ea,** albuginea; see *Kidney.* **T. albugin'ea cor'porum cavernoso'rum pe'nis,** fibrous investment of corpora cavernosa. **T. albugin'ea epidid'ymis,** fibrous investment of epididymis. **T. albugin'ea lie'nis,** fibrous capsule of spleen. **T. albugin'ea oc'uli,** sclerotic. **T. albugin'ea ova'rii,** condensed layer of stroma on surface of ovary. **T. albugin'ea tes'tis,** albuginea testis. **T. allantoï'des,** allantois. **T. amphiblestroï'des,** retina. **T. arachnoï'dea oc'uli,** lamina fusca. **T. arachnoï'des,** arachnoid membrane. **T. cadu'ca,** decidua. **T. can'dida oc'uli,** sclerotic. **T. car'nea,** dartos. **T. carno'sa,** panniculus carnosus. **T. cellulo'sus,** mucous membrane. **T. cer'ebri,** dura mater. **T. cer'ebri pro'pria,** pia mater. **T. choroï'dea,** choroid coat of eye. **T. cilia'ris,** ciliary muscles and processes. **T. commu'nis,** cremaster muscle. **T. conjuncti'va,** conjunctiva. **T. conjuncti'va palpebra'rum,** conjunctiva covering inner surface of eyelids. **T. cor'nea opa'ca,** sclerotic coat. **T. cor'nea pellu'cida,** cornea. **T. costa'lis,** pleura. **T. cras'sa,** decidua. **T. crystal'lina,** arachnoid membrane. **T. dar'tos,** see *Dartos.* **T. decid'ua reflex'a,** see *Decidua reflexa.* **T. decid'ua u'teri,** see *Decidua vera.* **T. Demorsia'na,** membrane of Descemet. **T. du'ra oc'uli,** sclerotic. **T. du'rior et cras'sa,** sclerotic. **T. elas'tica,** see *Artery.* **T. elytroï'des,** vaginal coat. **T. erythroï'des,** cremaster. **T. exte'rior o'vi,** decidua. **T. exter'na,** see *Artery.* **T. exter'na oc'uli,** sclerotic. **T. farcimina'lis,** allantois. **T. fibro'sa albugin'ea tes'tis,** see *Cavernous bodies* and *Folliculi Graafiani.* **T. fibro'sa commu'nis,** vaginal coat of the testicle. **T. fibro'sa oc'uli,** fibrous coat of eye formed by sclerotic and cornea. **T. fibro'sa re'num,** fibrous investment of kidney. **T. fibro'sa of spleen,** fibrous investment of spleen. **T. filamento'sa,** decidua. **T. gla'bra,** see *Artery.* **T. horten'sis,** Dianthus caryophyllus. **T. hyali'na pro'pria,** transparent layer of membranous semicircular canals situate between layers of connective tissue and of papilliform processes. **T. innomina'ta oc'uli,** sclerotic. **T. inter'na oc'uli,** retina. **T. in'tima,** see *Artery.* **T. in'tima oc'uli,** retina. **T. Jaco'bi,** *Jacob's coat* or *membrane, Bacillar layer of the retina;* layer of rods and cones situate between membrana limitans externa and pigmentary layer of retina. These rods and cones are connected with internal layers of the retina by means of fibres of Müller. **T. me'dia,** middle coat; see *Artery.* **T. muco'sa pharyn'gis,** mucous membrane of pharynx. **T. muscula'ris,** dartos. **T. ner'vea oc'uli,** retina. **T. nervo'rum,** neurilemma. **T. perfora'ta,** uvea. **T. pharyn'gis,** fibrous investment of pharynx. **T. præten'sa abdom'inis,** peritoneum. **T. pro'pria hep'atis,** fibrous investment of liver. **T. pro'pria lie'nis,** splenic capsule. **T. pro'pria ova'rii,** tunica albuginea of ovary. **T. pro'pria pharyn'gis,** pharyngeal mucous membrane. **T. pro'pria re'nis,** fibrous capsule of kidney. **T. pro'pria tes'tis,** tunica albuginea of testicle. **T. reticula'ris,** retina. **T. retifor'mis,** retina. **T. rhagoï'des,** choroïdea tunica; uvea. **T. rubicun'da scro'ti,** dartos. **T. ru'bra,** Dianthus caryophyllus. **T. Ruyschia'na,** see *Choroid.* **T. scle'ra bul'bi,** sclerotic coat. **T. sero'sa tes'tis,** tunica vaginalis propria. **T. subcosta'lis,** pleura. **T. tendino'sa oc'uli,** see *Sclerotic.* **T. thora'cis,** corset. **T. uva'lis,** uvea. **T. u'vea,** uvea. **T. uvifor'mis,** uvea. **T. vagina'lis,** see *Vaginal.* **T. vagina'lis bul'bi,** capsule of Bonnet. **T. vagina'lis commu'nis et fu-**

nic'uli spermat'ici, vaginal coat of the testicle. **T. vagina'lis lin'guæ**, see *Tongue*. **T. vagina'lis oc'uli**, capsule of Ténon of eye. **T. vagina'lis pro'pria**, vaginal coat of the testicle. **T. vagina'lis pro'pria funic'uli spermat'ici**, infundibuliform fascia. **T. vagina'lis reflex'a**, vaginal coat of the testicle. **T. vagina'lis tes'tis**, see *Testicle*. **T. vasculo'sa Halleri**, one of the two layers of vessels of the choroid formed by the coarser arterial and venous trunks. **T. vasculo'sa oc'uli**, choroid; see *Eye*. **T. vasculo'sa tes'tis**, vascular coat of the testis; an extremely delicate vascular membrane situate immediately within the tunica albuginea and enclosing the substance of the gland. **T. vit'rea**, hyaloid membrane.

Tunicula, tu-nik'u-lah (dim. of **Tunica**). *Tunicle*. Fine membrane, coat, or skin. Clitoris.

Tun'nel anæ'mia. Tunnel disease. **T. of Cor'ti**, see *Corti, tunnel of*. **T. disease**, caisson disease; see *Anchylostomiasis*.

Tu'pelo. Tree indigenous to the United States, bark of which is sometimes used in making uterine tents.

Tuph'lo-enteri'tis. Typhlo-enteritis.

Tuphus, tu'fus. Typhus.

Tupina'ria. Talpa.

Tur'ba hæmorrhoïda'lis. Hemorrhoidal disorder; see *Hæmorrhois*.

Turbationes (tur-bah-she-o'nees) **an'imi** (*turbo, turbatum*, to disorder). Affections of the mind.

Tur'beth min'eral. Hydrargyri subsulphas flavus. **T., Montpellier**, Globularia alypum. **T. plant**, Convolvulus turpethum.

Tur'binal. Term sometimes applied to the inferior turbinated bones.

Tur'binated bones (*turba* or *turben*, a top). Very thin bony plates rolled up in the form of scrolls and situate in the nasal fossa: 1. Superior spongy bone, the highest. 2. Middle spongy bone, *Os convolutum superius, Concha, C. narium superior* or *Morgagniana;* this bone projects inward and downward into the cavity of the nose from the ethmoid cells at the side of the nasal lamella. 3. Inferior spongy or turbinated bone, *Concha inferior, Convolutum inferius os;* lowest of the turbinated bones, and connected to the os maxillare, os palati, and os unguis. 4. Sphenoidal cornu. **T. crests**, ridges on os maxillare and os palati for articulation with inferior and middle turbinated bones. **T. pro'cesses**, turbinated bones.

Turbines (tur'bin-ees) **na'si** or **na'rium** (*turbo*, top). Turbinated bones.

Tur'bo cer'ebri. Pineal gland.

Türck, bun'dle of. Temporo-occipital tract of crusta. **T., col'umn of**, direct pyramidal tract of spinal cord.

Turgentia, tur-jen'she-ah. Turgescence.

Turgescence, tur-jes'sence (*turgeo*, to swell). *Turgescency, Turgidity, Turgidness*. Swelling or distension of a part. Turgescence of bile formerly denoted the passage of that fluid into the stomach, and its discharge by vomiting.

Turgescentia, tur-jes-sen'she-ah. Turgescence. **T. vesic'ulæ fel'leæ**, distension of the gall-bladder by bile.

Turgid, tur'jid. Swollen.

Turgidity, tur-jid'it-e. Turgescence.

Turgidness, tur'jid-ness. Turgescence.

Turio'nes aspar'agi. Young shoots of Asparagus officinalis, used as an edible.

Tur'key corn. Corydalis formosa. **T. galls**, nutgalls from Turkey. **T. gum**, term applied to various species of Egyptian gums. **T. o'pium**, opium imported from Turkey, produced in various countries of Asia Minor. **T. pea**, Gephrosia Virginiana.

Tur'kish bath. Bath in which the individual passes into bathing apartments of increasing temperature, after which he undergoes shampooing of the whole body, followed by cold douche. See *Bath*.

Turmeric, tur'mur-ik. Curcuma longa; Sanguinaria Canadensis. **T. pa'per**, unsized paper stained yellow with decoction of turmeric, used as a test for free alkali, which changes its color to brown.

Tur'merol. Aromatic volatile principle of turmeric.

Turn of life. See *Menses*.

Turn'bull's blue. Ferrous ferricyanide.

Turne'ra aphrodisi'aca. Mexican plant from which damiana is said to be derived. **T. microphyl'la**, plant indigenous to Mexico, also supposed to be a source of damiana. **T. opif'era**, plant indigenous to Brazil; leaves have astringent properties. **T. ulmifo'ra**, plant of West Indies; aromatic tonic properties.

Turner's ce'rate. Calamine ointment.

Turn'ing. Version. **T. of the fœ'tus**, see *Version*.

Tur'nip. Brassica rapa. **T. dra'gon**, Arum triphyllum. **T., In'dian**, Arum triphyllum; Psozalea esculenta. **T. pep'per**, Arum triphyllum. **T., prai'rie**, Camasia esculenta.

Turn'key. Instrument used for extracting teeth.

Turns. Menses.

Turn'sick. Vertiginous. See *Cœnurus*.

Turn'sole. Lichen roccella.

Turn'table. Instrument having a revolving plate, used in mounting microscopic slides.

Tur'pentine. Terebinthina. **T., Bordeaux'**, see *Pinus sylvestris*. **T., Brian'çon**, see *Pinus cembra*. **T., Chian'**, see *Pistacia terebinthus*. **T., com'mon American**, see *Pinus sylvestris*. **T., Cy'prus**, see *Pistacia terebinthus*. **T., damar'ra**, see *Pinus damarra*. **T., Dom'beya**, see *Dombeya excelsa*. **T., horse**, see *Pinus sylvestris*. **T., Stras'burg**, see *Pinus picea*. **T. tree**, Pistacia terebinthus. **T., Ven'ice**, see *Pinus larix*. **T., Ven'ice, true**, see *Pistacia terebinthus*. **T., white**, see *Pinus sylvestris*.

Tur'peth min'eral. Hydrargyri sulphas flava.

Turpe'thum. Convolvulus turpethum. **T. minera'le**, hydrargyri sulphas flava. **T. ni'grum**, hydrargyri oxydum cinereum.

Tur'quoise (I. *turchino*, greenish-blue). A stone long imagined to change its color according as the wearer is at the time in good or bad health—a superstitious notion.

Tur'tle bloom. Chelone glabra. **T., green**, Chelonia mydas. **T. head**, Chelone glabra.

Tur'tur. Penis.

Turun'da. Tent.

Turun'dæ Ital'icæ. Pastes made of wheat—known under the names of *Macaroni, Vermicelli*, and *Italian* or *Cagliaria paste*.

Turun'dula (dim. of **Turunda**). Tent.

Turunjebun. Alhagi maurorum.

Tus. See *Pinus abies*.

Tussaca reticulata, tus-sak'ah ret-ik-u-lat'ah. Goodyera pubescens.

Tus'sal (*tussis*, cough). Pertaining to cough.

Tusse'do. Tussis.

Tussicula, tus-sik'u-lah. See *Tussis*.

Tussic'ular (*tussicula*, slight cough). Relating to cough or slight cough.

Tussiculosus, tus-sik-u-lo'sus. Tussicular.

Tussila'go. *Coltsfoot, Foalfoot;* ord. Compositæ. Demulcent and expectorant, and used in pulmonary affections and in some cutaneous diseases. **T. far'fara**, tussilago. **T. hy'brida**, T. petasites. **T. petasi'tes**, *Butturbur, Pestilentwort;* roots are said to be aperient and alexipharmic. **T. petasi'tes hermaphrodi'ta**, T. petasites. **T. vulga'ris**, tussilago.

Tus'sis (dim. **Tussicula**). *Cough, Coughing*. Harsh, sonorous sound produced by deep, long-drawn inspiration, followed by complete closure of the glottis and then forced expiration, in the midst of which the glottis suddenly opens. The cough is said to be dry when unaccompanied by expectoration. See *Bronchitis*. **T. amphemer'ina**, pertussis. **T. asini'na**, pertussis. **T. bron'chica**, cough, tubal; see *Bronchitis*. **T. cani'na**, pertussis. **T. catarrha'lis simplex**, catarrh. **T. clamo'sa**, pertussis. **T. clango'sa**, pertussis. **T. convulsi'va**, pertussis. **T. delas'sans**, pertussis. **T. feri'na**, pertussis. **T. pu'eros stran'gulans**, pertussis. **T. quin'ta**, pertussis. **T. seni'lis**, bronchitis (chronic). **T. spasmod'ica**, pertussis. **T. stomacha'lis**, pertussis. **T. suf'focans**, pertussis. **T. suffocati'va**, pertussis. **T. tussiculo'sa**, pertussis.

Tus'sive (*tussis*, cough). Belonging or relating to cough, as tussive vibration, the vibration of the parietes of the chest, caused by coughing.

Tuta'mina (*tutamen*, protection). Parts which defend or protect others. **T. cer'ebri**, the scalp, pericranium, bones of the skull, and the meninges. **T. oc'uli**, eyebrows, eyelids, and lacrymal apparatus.

Tut'hia. Tutia.

Tu'tia. *Tutty.* The oxide of zinc that attaches itself in the form of gray incrustations to the chimneys of furnaces in which ores of zinc are smelted. Sometimes used for making an eye-salve.

Tut'tering. Stuttering.

Tut'ty. Tutia.

Tutu. Coriaria myrtifolia.

'Tween-brain. Thalamencephalon or second vesicle of embryonic brain.

Twin. Gemellus.

Twinge. See *Pain.*

Twink'ling of the eye. Nictation.

Twin'leaf, com'mon. Jeffersonia Bartoni or diphylla.

Twin'root. Orchis.

Twins, homoge'neous. Two fœtuses in one uterus, similar in sex and physical characteristics. **T., joined,** two beings united together, as Carolina or Siamese twins. **T., Siamese',** two brothers, Chang and Eng, connected by a ligamentous band from epigastrium of one to that of the other. See *Xiphopages.*

Twitch'grass. Triticum repens.

Twitch'ing. Tic.

Two-needles opera'tion. Operation of discission of cataract.

Tych'ica (*tuche*, accident). Fortuitous lesions or deformities.

Ty'le (*tule*, callus). Callosity.

Tylo'ma (*tuloma*). Callosity.

Tylophora asthmatica, til-of'o-rah asth-mat'ik-ah (*tulos*, callosity, *phero*, to bear, from the fleshiness of the leaflets of the corolla). *Ipecacuanha of the Isle of France;* ord. Asclepiadaceæ. A native of East Indies; root is acrid; in large doses, emetic; in smaller, often repeated, cathartic. It is also diaphoretic.

Tylo'sis (*tulosis*). Callosity. Inflammation of the lids when the substance of the lid, along the margin, is thickened and hardened. **T. bulbo'sa,** clavus. **T. gom'phos,** clavus.

Tylosteresis, til-o-ster-a'sis (*tulos*, callus, *steresis*, privation). Removal of callus.

Ty'lus (*tulos*, knot). Callosity.

Tym'ma (*tumma*). Wound.

Tym'panal. Tympanic.

Tympan'ia or **Tympan'ias.** Tympanites.

Tympan'ic. Relating to the tympanum. **T. an'gle,** angle from junction of basilar membrane of ductus cochlearis with cochlear wall. **T. ar'teries,** arteries of tympanum; tympanic branch of internal maxillary to membrana tympani; stylomastoid branch of posterior auricular to back part of tympanum and mastoid cells; petrosal branch of middle meningeal; branch from ascending pharyngeal; and tympanic branch of internal carotid. **T. at'tic,** attic of tympanum. **T. bone,** curved plate of bone in the adult, forming front and lower parts of auditory canal, but existing in the fœtus as a separate ring. **T. mem'brane,** see *Tympanum.* **T. nerve,** see *Petrous ganglion.* **T. pas'sage,** scala tympani. **T. plate,** T. bone. **T. plex'us,** nervous anastomosis on promontory of tympanum. **T. ten'sor,** tensor tympani muscle.

Tympanicolingual'is. Common trunk from junction of chorda tympani, gustatory nerve, and branch from otic ganglion.

Tympanicomas'toid fis'sure. Furrow indicating junction of mastoid with tympanic portion of temporal bone.

Tympanism, tim'pan-ism. State of parts affected with tympanites.

Tympanita, tim-pan-e'tah. Tympanites.

Tympanites, tim-pan-e'tees (*tumpanon*, drum). *Tympany, Meteorism, Drum belly, Wind dropsy.* A swelling of the abdomen, caused by the accumulation of air in the intestinal tube or in the peritoneal cavity. Tympanites may be idiopathic or symptomatic. The former is due to collection of gas from fermentation or decomposition of intestinal contents; the latter, to retention of gas resulting from organic lesion, usually obstructive in its nature. Sometimes air is contained in the peritoneal cavity, constituting *Tympanites abdominalis*—the accumulation in the intestines being called *Tympanites intestinalis.* **T., u'terine,** physometra.

Tympanitic, tim-pan-it'ik. Relating to tympanites. **T. res'onance,** sound produced by percussion over cavities distended by air.

Tympanitis, tim-pan-e'tis. Inflammation of lining membrane of the middle ear. Also tympanites.

Tympanohyal, tim-pan-o-hi'al. Fœtal ossicle separated from the hyoid bone in the embryo, and later disappearing by becoming ossified to adjacent parts of periotic capsule.

Tympanophony, tim-pan-of'o-ne (*tympanum*, *phone*, voice). Abnormal sounds in the ear, as echoes, etc.

Tympanosis, tim-pan-o'sis. Tympanites.

Tympanum, tim'pan-um (*tumpanon*, drum). *Drum* or *Barrel of the ear, Ear-drum, Cavity of the tympanum* or *of the drum.* A cavity of an irregular shape, constituting the middle ear, situate in the petrous portion of the temporal bone, between the meatus auditorius externus and the labyrinth. This cavity has six parietes: 1. The roof. 2. The outer wall, formed by the tympanic plate and tympanic membrane, membrane of the drum, membrana tympani; thin, semitransparent circular membrane, convex within, concave without, closing the inner extremity of the meatus auditorius externus. This wall presents for examination the aperture of the iter chordæ posterius, Gasserian or glenoid fissure, and opening for iter chordæ anterius. 3. Floor. 4. Internal wall, on which are fenestra ovalis, fenestra rotunda or foramen rotundum, promontory, ridge of aquæductus Fallopii, pyramid, and opening for stapedius. 5. Posterior wall, presenting for examination the opening of the mastoid cells. 6. Anterior wall, on which are processus cochleariformis, orifice of the Eustachian tube, and canal for the tensor tympani. **T. mi'nus,** see *Fenestra.* **T. secunda'rium,** see *Fenestra.*

Tympany, tim'pan-e. Tympanites. **T. of womb,** physometra.

Type, tipe (*tupos*, a stamp). Character. Form in which the symptoms of a disease exhibit themselves and succeed each other. It may be continued, intermittent, or remittent.

Typha (te'fah) **angustifo'lia** has same properties as **T. aromat'ica,** *Acorus calamus,* and **T. latifo'lia,** *Cat-tail, Reed-mace, Greater reed-mace, Bull's-egg;* plant common in marshes and ponds in this country and in Europe. Ord. Typhaceæ. Its roots have been used in dysentery and blennorrhagia; the down of the flower has been applied to burns.

Typhæmia, tif-e'me-ah. Disordered condition of the blood in typhus.

Typhfever, tife-fe'ver. See *Typhus.*

Typhia, tif'e-ah. Typhoid fever.

Typhicus, tif'ik-us (*tuphos*, stupor). Typhoid.

Typhine, ti'feen (*tuphos*, stupor). A term proposed for the specific zymotic principle by which typhus fever is propagated.

Typhinia, tif-in'e-ah. Relapsing fever.

Typhization, ti-fi-za'shun. Aggregate of symptoms in those constantly exposed to typhus contagion.

Typhlitis, tif-le'tis (*tuphlos*, blind, *itis*). Inflammation of the cæcum, occasionally leading to perforative ulceration, and usually accompanied with inflammation of the ascending colon. **T. stercora'lis,** typhlo-enteritis.

Typhlo, tif'lo (*tuphlos*, blind). In composition, the cæcum.

Typhlodicliditis, tif-lo-dik-le-de'tis (*typhlo*, *diklis*, a doubling). Inflammation of the iliocæcal valve.

Typh'lo-enteri'tis (*typhlo*, *enteritis*, inflammation of the intestines). *Phlegmonous tumor of the cæcum.* Typhlitis.

Typh'lo-en'terum (*typhlos*, blind, *enteron*, intestine). Cæcum.

Typhlolithiasis, tif-lo-lith-e'as-is. Formation of concretions in the cæcum.

Typhlops, tif'lops (*typhlo*, *ops*, eye). Cæcum.

Typhlosis, tif-lo'sis. Blindness.

Typhlostenosis, tif-lo-sten-o'sis. Stricture of cæcum.

Typhloteritis, tif-lo-ter-e'tis. Typhlo-enteritis.

Typhloterum, tif-lot'er-um. Cæcum.

Typhlotes, tif'lot-ees (*typhlotto*, to be blind). Blinding.

Typhlotrophium, tif-lo-trof'e-um. Blind asylum.

Typho, te'fo (*typhos*, stupor). In composition, typhus.

Typhodes, tif-o'dees (*typhodes*, affected with stupor). Typhous.

Typhohæmia, tif-o-he'me-ah (*typhus*, *haima*, blood). See *Putrefaction*.

Typhoid, ti'foid (*typhos*, stupor, *eidos*, resemblance). Appertaining to or resembling typhus. **T. affec'tion**, see *Typhus*. **T. baeil'lus**, supposed specific bacillus of typhoid fever discovered by Eberth, and later studied by Gaffky. It is active, rod-shaped with rounded ends, three times as long as it is broad, occurring alone in tissue-sections, but in long strings in artificial cultures. **T. chol'era**, see *Cholera*. **T. fe'ver**, *Abdominal typhus*, *Enteric fever*, *Pathogenic fever*, *Gastric fever*; acute febrile disease dependent upon entrance into the system of a definite specific poison, attended by lesions of Peyer's patches, spleen, blood, and mesenteric glands, and accompanied by cerebral, abdominal, and thoracic symptoms. Toward the end of the first week rose-colored spots appear on the surface of the abdomen. It is not considered contagious in the ordinary sense, except so far as the fæces are concerned, the poison not being given off from the skin or in the breath, but in the fæces. A special micro-organism has been described as an etiological factor in this fever. See *Bacillus of typhoid fever*. Experience has shown that the successful treatment of typhoid fever does not depend on any special medication, but on good nursing and careful regulation of diet, including the omission of all solids, so that the ulcerated Peyerian patches will have a period of rest from participating in the work of intestinal digestion, and the ulceration be thus not increased; otherwise peritonitis and perforation of the bowel may occur with fatal result. The use of the cold bath as an external antipyretic application in this disease is advocated by a number of writers and teachers of practical medicine. See *Fevers, eruptive*, and *Incubation*. **T. fe'ver of In'dia**, cholera. **T., sink'ing**, see *Adynamic*. **T. spots**, characteristic pale rose-red, slightly elevated papulæ, momentarily disappearing on pressure, appearing in typhoid fever about the seventh day after the patient takes to bed. **T. tongue**, appearance of tongue in enteric and typhus fevers; at first heavily coated in the centre, later becoming dry, brown, and fissured. **T., walk'ing**, typhus ambulatorius.

Typhomala'rial fe'ver. *Camp fever*, *Chickahominy fever*. Febrile disease in which symptoms of typhoid and remittent fevers are intermingled. The term Chickahominy was applied to it from the locality in which it prevailed during the late War of the Rebellion in the United States.

Typhomania, tif-o-man'e-ah (*typho*, *mania*). *Delirium with stupor*, *Subdelirium*. Low muttering delirium common in typhus. See also *Coma vigil* and *Insomnia*.

Typhonia, tif-o'ne-ah (*typhos*, stupor). Coma vigil.

Typhorube'oloid. Typhus fever in which the cutaneous eruption is like that of rubeola.

Typhosepses, tif-o-sep'sees. Typhoseptoses.

Typhoseptoses, tif-o-sep-to'sees (*typho*, *sepsis*, putrefaction). Typhous affections.

Typho'sis (*typhos*, stupor). The typhous condition.

Typhosus, tif-o'sus (*typhos*, stupor). Typhoid; typhous.

Typhotoxine, ti-fo-toks'een. $C_7H_{17}NO_2$. Ptomaïne obtained from cultures of typhoid bacilli. It has no specific action; isomeric with gadinine.

Typhous, ti'fus. Belonging or relating to typhus.

Typhus, ti'fus (*typhos*, stupor). *True*, *Putrid*, *Jail*, *Hospital*, or *Ship fever*, *Petechial*, *Maculated*, or *Spotted fever*. Acute febrile disease dependent upon entrance into system of specific poison, characterized by high temperature, small, weak, but usually frequent pulse, with great prostration of strength and much cerebral disturbance; duration being usually a fortnight to three weeks or longer. It is marked by lesions of the blood, but not of organs; is endemic, epidemic, and highly contagious. Formerly divided into two varieties, depending upon severity of symptoms, as mild or simple—*typhus mitior*, *nervous fever*—and grave or malignant, *typhus gravior*. Both have been included under one generic name, *typhfever*. **T. abdomina'lis**, see *Typhoid fever*. **T. ambulato'rius**, typhoid fever in which subjective symptoms are so mild as to permit the patient to walk about until the course of the disease is somewhat advanced. **T. anthrac'icus**, plague. **T. anthropopotho'racus**, typhus. **T. aphthoï'deus**, aphthæ. **T. bel'licus**, typhus. **T. Bengalen'sis**, cholera. **T. bubon'icus**, plague. **T. car'cerum**, typhus gravior. **T. Castren'sis**, typhus gravior. **T., cer'ebral**, cerebrospinal meningitis. **T. comato'sus**, typhus mitior. **T. commu'nis**, typhus. **T. contagio'sus exanthemat'icus**, typhus. **T., conta'gious**, typhus. **T., convulsi'vo-cer'ebral**, chorea, electric. **T. exanthemat'icus**, typhus. **T. ganglio'na'ris abdomina'lis**, see *Typhoid fever*. **T. gravis'simus**, plague. **T. Hiber'nicus**, T. gravior. **T. ictero'des**, yellow fever. **T. intestina'lis**, see *Typhoid fever*. **T. morbillo'sus**, rubeola. **T. nervo'sus**, typhus mitior. **T. nos'tras**, typhus. **T. pestilentia'lis**, plague. **T. pes'tis**, plague. **T. petechia'lis**, typhus gravior. **T., puer'peral**, see *Peritonitis*. **T. recur'rens**, see *Relapse*. **T. scarlati'nus**, scarlatina. **T. sid'erans**, violent and rapidly fatal attack of typhoid fever. **T. sim'plex**, typhus mitior. **T. sporad'icus**, see *Typhus*. **T., syn'copal**, cerebrospinal meningitis. **T. trop'icus**, yellow fever. **T., true**, typhus. **T. vesicula'ris**, pemphigus.

Typic (tip'ik) or **typ'ical.** Characterized by a particular type, as a typical fever.

Typoses, tip-o'sees. See *Periodicity*.

Ty'pus. Type.

Tyran'nus (tyrant). Sixth day. See *Critical days*.

Tyrbasia, tur-bah'ze-ah. Agitation.

Tyrbe, tur'be. Agitation.

Tyremesis, tir-em'es-is (*turos*, cheese, *emesis*, vomiting). Vomiting of curdy matter.

Tyreusis, tir-u'sis (*tureusis*, cheese-making). Tyremesis; tyrosis.

Tyr'ia. Porrigo decalvans.

Tyri'asis. Lepra. Satyriasis.

Tyrine, ti'reen. Casein.

Tyro'des. Cheesy.

Tyro'ma. Porrigo decalvans.

Tyrosin, ti'ro-sin. Amido-acid, crystallizing in fine needles, usually in white feathery masses, occurring as a result of pancreatic digestion or of decomposition of organic matter either by putrefaction or by acids. It has been found, like leucin, in typhoid fever and in acute yellow atrophy of the liver.

Tyrosis, tir-o'sis (*tyrus*). Tyremesis; also the curdling of milk in the stomach.

Tyrotemesis, tir-o-tem'es-is (*turotos*, made into cheese, *emesis*, vomiting). Vomiting of cheesy or curdy matter.

Tyrotoxicon, tir-o-toks'ik-on. Ptomaïne discovered by Vaughan occurring under certain conditions in cheese, milk, cream, and ice cream. The symptoms of tyrotoxicon-poisoning are those of acute gastro-enteritis, with dilatation of the pupil, peculiar pricking or tingling sensation in the limbs, and dryness of the throat and mouth. See *Ptomaïnes*.

Tyrrel's (tir'rel's) **fas'cia.** Rectovesical fascia. **T.'s hook**, blunt hook for drawing out the iris in iridectomy.

Tyrus, tir'us (*turos*, choese). Cheese.

Ty'son's glands. Small sebaceous follicles secreting smegma, situate on the cervix and corona glandis of the penis and labia pudendi.

U.

U'ber. See *Mamma* and *Nipple.*

U'beris a'pex (apex of the mamma). Nipple; papilla.

Ud'der. See *Mamma.*

U'la (*oula*, gums). Gum.

Ulæ (pl. of **Ula**). Gums.

Ulæmorrhagia, u-le-mor-rhaj'e-ah. Hemorrhage from the gums.

Ulatroph'ia (*oulon*, gum, *atrophia*, atrophy). Shrinking or falling away of the gums.

Ulcer, ul'sur (*helcos*, sore). A sore; surface of granulations in the soft parts, of longer or shorter standing, and kept up by some local disease or constitutional cause. **U., A'den**, see *Beriberi.* **U., An'amite**, obstinate phagedenic ulceration occurring in hot climates. **U., cal'lous**, ulcer situate on lower half of the leg, having slightly concave surface covered with flattened granulations, discharging their scanty pus, and surrounded by elevated ring of dense indurated tissue. **U., can'croid**, lupus. **U., Chiro'nian**, hard callous ulcer, difficult of cure; see *Chironium.* **U., Co'chin Chi'na**, see *Cochin China* and *Beriberi.* **U., cold**, a term applied by Mr. Paget to small inflammatory ulcers occurring spontaneously at the extremities of the body, sometimes preceded by gangrenous spots, and resembling in some respects ulcerated chilblains. **U., corro'ding**, ulcer, rodent. **U., Del'hi**, see *Delhi.* **U., eczem'atous**, chronic ulcer having marked eczematous characteristics. **U., ero'sive, of the der'ma**, lupus. **U. of foot, per'forating**, intractable form of ulceration, usually occupying anterior part of plantar surface of foot, and leading to destructive disorganization of neighboring bones and joints. **U., fun'gous**, collection of granulations which bleed easily, projecting above the level of the surrounding skin, occasionally spreading out as a mushroom or cauliflower growth. **U., gout'y**, ulcer, usually superficial, observed in gouty parts of the body or over gouty deposits. **U., hemorrhag'ic**, ulceration characterized by occasional bleeding from its surface. It may be connected with a hemorrhagic diathesis or be an outlet for vicarious menstruation. An ulcer associated with varicose veins is usually called a *varicose ulcer.* **U., in'dolent**, see *U., callous.* **U., inflamed**, surface of granulations which is at first red, later becomes dusky, and finally breaks down, forming a gray, ragged, sloughing area, discharging profusely pus and tissue-débris. The surrounding skin is red and inflamed, and there are great pain and systemic disturbance. **U., ir'ritable**, *Neuralgic ulcer.* An ulcer, usually occurring in the tibial region, characterized by intense pain and hyperæsthesia. **U., Ja'cob's**, lupus. **U., lu'poid**, ulcer, rodent. **U., malig'nant**, hospital gangrene. **U., œdem'atous**, ulcer having large flabby granulations, apparently distended with serum, not infrequently detached in large masses by sloughing. **U., phageden'ic**, aggravated sloughing ulcer, having dark-red edges, discharging ichorous pus containing shreds of dead tissue, extending rapidly and accompanied by severe constitutional symptoms of adynamic type. **U., pu'trid**, hospital gangrene. **U., ro'dent**, *Lupoid* or *Corroding ulcer.* A destructive local cancerous affection, beginning as a dry wart, afterward ulcerating, becoming converted into an indolent sore, without granulation. When of extensive size it is accompanied with a fetid purulent discharge. **U., round**, ulcer of the stomach, perforating. **U., scorbu'tic**, an ulcer or sore modified in its progress by the general scorbutic taint. **U., se'nile**, dry, dusky ulcers commonly met with in the dry, withered limbs of those who have a degeneracy of the arteries, etc. from old age. **U., simple**, surface of small, uniform, cherry-red granulations, having oval shape, with gently-sloping, moderately-indurated edge, discharging a small quantity of laudable pus. **U., slough'ing**, aggravated inflamed ulcer, rapidly spreading, and attended by destruction of visible portions of tissue, which are thrown off as offensive gray sloughs. **U. of stom'ach, per'forating**, an ulcerated condition of the stomach, dependent on obstruction of the blood-vessels of that organ, usually occurring in the posterior wall of the pyloric portion. The perforation of the serous coat has the appearance of having been cut with a punch. It is called also round ulcer. The term *Gastrelcosis* has been applied generally to ulceration of the stomach from any cause. **U., stru'mous**, chronic, painless ulcer, having œdematous granulations discharging thick, oily pus, occurring in a strumous diathesis. **U., tele'phian**, telephium. **U., var'icose**, see *Ulcer, hemorrhagic.* **U., wart'y, of Mar'jolin**, see *Warty tumor of cicatrices.* **U., weak**, U., œdematous. **U., Ye'men**, see *Beriberi.*

Ul'cera intestina'lia. Ulcers of the bowels. **U. laryn'gis**, laryngeal phthisis. **U. serpenta'ria o'ris**, aphthæ. **U. u'teri**, see *Metrophthisis.* **U. ventric'uli**, ulceration of the stomach. **U. vesi'cæ**, consumption from ulceration of the bladder.

Ul'cerated (*ulcero*, to make sore). In the state of an ulcer. Affected with ulcers.

Ulceratio, ul-ser-ah'she-o. Ulceration. **U. intestina'lis**, ulceration of the intestines. **U. ventric'uli**, ulceration of the stomach.

Ulcera'tion. Superficial ulcer. Molecular death of a part.

Ul'cerative. Relating to ulceration, as an ulcerative process. **U. scrofuloder'ma**, see *Inflammatory fungoid neoplasm.*

Ul'cerous (*ulcus*, ulcer). Having the character of an ulcer. Affected with ulcers.

Ul'cers, Egyp'tian. Ægyptia ulcera.

Ulcus, ul'kus (*helcos*). Ulcer. **U. aton'icum**, rupia. **U. cacoë'thes**, see *Cacoëthes.* **U. cancro'sum**, cancer; chancre. **U. cor'neæ ser'pens**, *Sæmisch's ulcer, Infecting ulcer;* deep sloughing ulcer, having tendency to spread over the cornea. **U. cru'ris**, indolent ulcer of leg. **U. dacryo'des**, see *Dacryodes.* **U. depas'cens**, phagedenic ulcer. **U. ex digestio'ne**, appearance of stomach resembling ulcer, due to gastric juice. **U., endem'ic**, term applied to ulcers peculiar to certain localities or countries, as *Cochin-China ulcer, Beriberi ulcer*, etc. **U. ero'dens**, lupus. **U. exe'dens**, rodent ulcer. **U. feri'num**, phagedenic ulcer. **U. fistulo'sum**, hypophora. **U. gra've**, mycetoma. **U. hyp'ulum**, ulcer healed at the top, but not at the bottom. **U. na'rium fœ'tens**, ozæna. **U. obam'bulans**, phagedenic ulcer. **U. phagedæ'nicum**, phagedenic ulcer. **U. phagedæ'nicum co'lis**, phagedenic chancre. **U. pulmo'num**, phthisis pulmonalis. **U. sinuo'sum**, hypophora. **U. syphilit'icum**, chancre. **U. Syri'acum**, cynanche maligna. **U. tele'phium**, telephium. **U. tuberculo'sum**, lupus. **U. u'teri**, ulceration of the uterus; leucorrhœa. **U. vene'reum du'rum**, chancre. **U. ventric'uli per'forans**, perforating ulcer of the stomach. **U. ventric'uli rotun'dum**, perforating ulcer of the stomach.

Ulcus'cula præpu'tii. Herpes præputii.

Ulcus'culum (dim. of **Ulcus**, ulcer). Small ulcer. **U. cancro'sum**, chancre.

U'le. Cicatrix.

Ulerythema, u-ler-ith-e'mah. Erythematous skin affection characterized by formation of cicatrices. **U. centrif'ugum**, lupus erythematosus. **U. ophryog'enes**, form of ulerythema commencing at the eyebrows, and later giving rise to alopecia.

Uletic, u-let'ik. Relating or pertaining to the gum.

Uleticus, u-let'ik-us. Relating to the gums.

U'lex Europæ'us. Common furse or gorse, a prickly shrub of Europe said to have diuretic principles.

Ulexine, u-leks'een. Alkaloid, having local anæsthetic properties, obtained from seeds of Ulex Europæus. Also has tonic effect upon nerves, muscles, and respiration, and is a diuretic; antidote to strychnia. Cytisine.

Uliginous, u-lij'in-us (*uligo*, moisture). Relating to or growing in a marshy soil.

Uli'tis (*ulon*, gum, *itis*). Inflammation of the gums. **U. sep'tica,** cancer aquaticus.

Ullu'co. Tropæolum tuberosum.

Ulma'ria (*ulmus*). Spiræa ulmaria. **U. palus'tris,** Spiræa ulmaria.

Ul'mus. *Common elm*, ord. Ulmaceæ. The inner rough bark, *Ulmus* (Ph. Br.), has a bitter and mucilaginous taste; tonic, alterative, and diuretic, and has been used chiefly in lepra and other cutaneous affections; see *Ulmus Americana.* **U. ala'ta,** *Lynn wahoo.* The bark of this root has been used successfully as a cataplasm in phlegmonous inflammation. **U. America'na,** *Rough-leaved, Red,* or *Slippery elm.* **U. campes'tris,** ulmus. **U. ful'va,** the inner bark, *Ulmus* (Ph. U. S.), is highly mucilaginous, and is used in form of mucilage as a vehicle for disagreeable medicines and as a poultice; may be employed, also, as a tent for dilating openings or passages; U. rubra. **U. gla'bra,** ulmus. **U. monta'na,** ulmus. **U. nu'da,** ulmus. **U. ru'bra,** U. fulva. **U. sati'va,** ulmus. **U. sca'bra,** ulmus.

Ul'na (*olene*, elbow). Inner bone of the forearm which forms the prominence of the elbow. Its upper extremity has two eminences, olecranon and coronoid, which are separated from each other by the greater sigmoid or semilunar fossa or olecranoid cavity. At the base of the coronoid process is the tubercle of the ulna for the insertion of the brachialis internus. On the outside of this extremity is the lesser sigmoid cavity, which articulates with the head of the radius. The inferior extremity of the cubitus has a pointed process called the styloid process. The ulna is articulated with the humerus and radius, and, mediately, with the cuneiform bone.

Ul'nad. See *Ulnar aspect.*

Ul'nar. Cubital. **U. ar'tery,** the larger of the two subdivisions of the brachial artery, commencing immediately below the bend of the elbow, running along the ulnar side of the arm to the wrist, and passing across the palm of the hand to form the superficial palmar arch. The anterior and posterior ulnar recurrent, anterior and posterior interosseous and muscular arteries, are branches of the ulnar given off in the forearm. **U. as'pect,** an aspect toward the side on which the ulna is situated. *Ulnad* is used adverbially to signify toward the ulnar aspect. **U. glands,** lymphatic glands situate in front of the elbow and above internal condyle of humerus; usually enlarged in syphilis. **U. groove,** furrow between inner condyle of humerus and olecranon process for passage of ulnar nerve. **U. nerve,** branch of brachial plexus, from which it arises in common with inner head of median nerve; distributed to the muscles and integument of the forearm and hand. **U. recur'rent ar'tery,** see *Ulnar.* **U. veins** are two veins, anterior and posterior, collecting blood from the forearm.

Ulna'ris. Ulnar; cubital. **U. exter'nus,** see *Cubital muscles.* **U. grac'ilis,** palmaris longus. **U. inter'nus,** see *Cubital muscles.* **U. quin'ti,** extensor carpi ulnaris, having narrow slip attached to little finger.

Ulocace, u-lok'as-e (*oulon*, gum, *kakos*, evil). Cancer aquaticus; stomacace.

Ulocarcino'ma. Carcinoma of the gums.

U'lon. Gum.

Uloncus, u-lon'kus (*oulon*, gum, *onkos*, tumor). Swelling or tumor of the gums; epulis.

Ulorrhag'ia (*oulon*, *rhegnumi*, to break forth). Bleeding from the gums.

Ulorrhœ'a (*oulon*, *rheo*, to flow). Bleeding from the gums.

Ulo'sis. Cicatrization.

Ulot'ic. Cicatrizing.

Ulot'richus (*ule*, wood, *thrix*, *trichos*, hair). Having woolly hair.

Ul'timate anal'ysis. Detection and estimation of ultimate elements entering into the composition of an organic compound. **U. el'ements,** elements not further divisible. **U. prin'ciple,** ultimate element.

Ultiminister'nal. Sixth or last bony portion of the sternum, sometimes called *Ensisternal.*

Ul'timum mo'riens (last dying). A term given to the part of the economy which dies last. The muscular contractility of the right auricle is said to be the last to disappear. See *Punctum saliens.*

Ultraqui'nine. Homoquinine.

Ultzmann's test for bile. See *Urine, examination of* (detection of bile).

U'lum. Gum.

Ul'va cris'pa. Fucus crispus. **U. latis'sima,** *Broad green laver, Green sloke, Oyster green;* order Algæ; used as an edible. **U. umbilica'lis,** *Laciniated purple laver* of Great Britain, is pickled and sold as laver; antiscorbutic.

Ulyp'tol. Antiseptic preparation composed of salicylic and carbolic acids and eucalyptus.

Um'bel, yel'low. Cypripedium luteum.

Umbil'ic. Umbilical.

Umbil'ical (*umbilicus*, navel). Belonging or relating to the umbilicus or navel. **U. ar'teries,** *Allantoic* or *Hypogastric arteries;* fœtal structures only, developed early as branches of the internal iliac; they carry blood from the embryo to the allantois, and in animals developed in a uterus to the placenta; they possess valves. They exist only in the fœtus; they clear the umbilical ring and proceed to the placenta, to which they carry the residuum of the blood sent to the fœtus by the umbilical vein. The portion of the artery within the abdomen is called the *hypogastric artery;* the portion external to that cavity, the *umbilical artery.* As soon as respiration is established the blood ceases to pass by the umbilical arteries, which become obliterated as well as the vein, and are transformed into two strong ligamentous cords—the vein forming the round ligament or ligamentum rotundum of the liver. **U. circula'tion,** *Allantoic circulation;* the second embryonic circulation, consisting of two umbilical veins and two arteries, carrying blood to and from the allantoic sac on the placenta; in the latter case the chief circulation of the embryo. **U. cord,** funiculus umbilicalis; an embryonic structure joining the placenta with the umbilicus of the fœtus, developed about the 20th to 30th day; consisting of the allantois stalk and its vessels, two umbilical arteries, the umbilical vein, the atrophied yolk-stalk; a layer of the amnion and mucous tissue (jelly of the latter) form the covering. Length (human), 20–21 inches; diameter, ½–½ inch. The vessels are tortuous; the arteries possess valves. **U. re'gion,** *Mesogastrium;* middle region of the abdomen, in which the umbilicus is placed. The sides of this are called the flanks or lumbar regions. In the umbilical region are the omentum, the jejunum, and the greater part of the mesentery, the aorta, vena cava, the trunks of the renal arteries and veins, the origin of the spermatic arteries, etc. **U. ring,** fibrous ring surrounding the aperture of the umbilicus, and through which umbilical hernia occurs in children. **U. stalk,** a structure formed early in fœtal life, being a construction of the embryonic layers on the ventral side of the embryo, containing the beginning of the allantoic or yolk sac; further growth and construction form the umbilical cord. **U. veins,** fœtal structures carrying blood to the embryo from the allantois or placenta. The right vein soon atrophies. At first they empty into the vitelline vein; later the left enters the portal and sends a branch, the ductus venosus, to the left hepatic. In the adult the fibrous cord forms the round ligament of the liver. **U. vesi'cæ,** vesicula umbilicalis. **U. ves'icle** or **yolk-sac,** a sac formed in early fœtal life containing the yolk; the splanchnopleuric layers of head, tail, and lateral folds grow around the yolk, constrict near the ventral side of the embryo, and form this sac. It is greatly developed in oviparous ova. The vitelline circulation develops in the outer wall of this sac.

U. ves'sels, these include two arteries and the umbilical vein; the umbilical vein arises from the placenta, and terminates at the fissure on the inferior surface of the liver of the fœtus, to which it conveys the blood necessary for its nutrition.

Umbilica'lis. Umbilical.

Umbil'icated. Depressed in the centre like the umbilicus, as an umbilicated pustule. The term *Umbilication* is applied to such a depression.

Umbilication, um-bil-i-ka'shun. See *Umbilicated.*

Umbilicus, um-bil-e'kus (Eng. um-bil-i'kus) (*omphalos,* navel). The *Umbilic* or *Navel.* Round cicatrix, about the median line of the abdomen, corresponding to an aperture in the fœtus, affording passage to the vessels of the umbilical cord. **U. mari'nus,** submarine production found on rocks and shells in the south of France. Reputed to be anthelmintic and diuretic.

Um'bo. Deepest part of the arched membrana tympani, corresponding to the termination of the handle of the malleus. See *Elbow* and *Umbilicus.*

Umbrel'la tree (*umbra,* a shade). Magnolia tripetala.

Unbow'elling. Operation of taking out the bowels.

Uncaria (un-kah're-ah) **gam'bir.** Nauclea gambir.

Uncas (un'kas), **In'dian.** Veratrum viride.

Uncia, un'se-ah (*ounzia*). Ounce.

Unciform, un'se-form (*uncus, forma,* shape). Having the shape of a hook. **U. bone,** fourth bone of the second row of the carpus. Inward and forward is the unciform process, giving attachment to the annular ligament of the carpus. It is articulated with the os semilunare, os magnum, os cuneiforme, and the fourth and fifth metacarpal bones. **U. em'inence,** hippocampus minor. **U. pro'cess,** *Great process of the ethmoid;* hook-like lamina of bone projecting downward and backward immediately beneath the os planum, serving to close the upper part of the orifice of the antrum; see *Unciform bone.*

Uncinate, un'sin-ate. Unciform. **U. gy'rus, U. lobe, or U. convolu'tion,** anterior inferior termination of gyrus fornicatus extending to fissure of Sylvius, being bounded above by dentate fissure, and separated below from temporo-sphenoidal lobe by collateral fissure. Terminates at anterior extremity in hook-like process termed uncus or crotchet.

Uncinat'um. Unciform bone.

Un'cinus. Hook.

Uncipres'sure or **Uncipres'sion** (*uncus,* a hook, *premo, pressum,* to press). Compression of an artery by means of a hook to control hemorrhage.

Uncon'scious. Not conscious; without cerebral appreciation, or occurring without such appreciation, as an unconscious movement in unconscious cerebration, so called.

Uncon'sciousness. Condition of suspension of sensibility and temporary abolition of reflexes, occurring as a symptom of apoplexy, sunstroke, etc.

Unc'tion (*unguo,* to anoint). Inunction; ointment; unguentum hydrargyri.

Unc'tor. Anointer in ancient bathing establishments.

Uncto'rium or **Unctua'rium.** Oil chamber in ancient gymnasium.

Unctuos'itas elephant'ina. Increased secretion of sebaceous matter in the congestive stage of elephantiasis Græcorum.

Uncus, un'kus. Hook. See *Uncinate gyrus.*

Undim'ia. Tumor filled with a gelatinous matter like the white of an egg.

Undo'sus (*unda,* wave). Undulatory, as the pulse of adynamia.

Undulation, un-du-la'shun (*unda,* wave) Fluctuation; propagation in waves.

Un'dulatory. Moving in undulations or waves, as light, heat, and electricity.

U'nedo. Arbutus unedo. **U. papyra'cea,** Arbutus unedo.

Un'gual or **Un'gueal** (*unguis,* nail). Belonging or relating to the nails. **U. bone,** lacrymal bone. **U. fur'row,** transverse groove in the nail from loss of substance—evidence of a cachectic condition. **U. ma'trix,** see *Nail.* **U. pha'lanx,** terminal bones of fingers and toes.

Unguenta'ria. See *Myristica moschata.*

Unguenta'rius (*unguentum*). One who makes and sells ointments; a perfumer.

Unguen'tum (*unguo,* to anoint). *Unction, Salve, Ointment.* Ointments are topical applications of a consistence more or less analogous to that of lard. Unguentum (Ph. U. S.) is made as follows: yellow wax, ℥j; lard, ℥iv. Ointments are of less consistence than cerates, although the terms are often used indiscriminately; see *Unguentum ceræ* and *Pomatum.* **U. a'cidi bo'rici** (Ph. Br.) (boric acid, ℥iiss; soft paraffin, ℥x; hard paraffin, ℥v). **U. ac'idi carbol'ici** (Ph. U. S.), *Ointment of carbolic acid* (carbolic acid, gr. xlviij; officinal ointment, ℥j). According to Ph. Br., carbolic acid, 1 p.; soft paraffin, 12 p.; hard paraffin, 6 p. Used in cases where carbolic acid is indicated externally. **U. ac'idi gal'lici** (Ph. U. S.), *Ointment of gallic acid* (gallic acid, gr. xlviij; benzoinated lard, ℥j). **U. ac'idi nitro'si,** *Ointment of nitrous acid* (adip. suilli, ℔j; acid. nitros., ℥vj); stimulant; used in itch and other cutaneous eruptions and in foul ulcers. **U. ac'idi salicyl'ici** (Ph. Br.), *Ointment of salicylic acid* (salicylic acid, gr. lx; soft paraffin, gr. mlxxx; hard paraffin., gr. dxl). **U. ac'idi tan'nici** (Ph. U. S.), *Ointment of tannic acid* (tannic acid, gr. xlviij; benzoinated lard, ℥j); used in hemorrhoids, prolapse of rectum, etc., like unguentum gallæ. **U. aconiti'næ** (Ph. Br.), *U. aconitiæ, Ointment of aconitine* (aconitinæ, gr. viij; sp. rectif., f℥ss; adipis præparat., ℥j): in neuralgic pains. **U. ad'ipis,** U. ceræ. **U. adipoce'ræ ceto'rum,** ceratum cetacei. **U. Ægypti'acum,** linimentum æruginis. **U. Ægyp'tium al'bum,** ointment of lilies and aromatic plants. **U. æru'ginis,** U. subacetatis cupri. **U. alabas'trinum,** see *Alabaster.* **U. al'bum,** unguentum cetacei. **U. al'bum resol'vens,** linimentum ammoniæ fortius. **U. de althæ'â,** marshmallow ointment. **U. antimo'nii,** U. antimonii tartarati (Ph. Br.), *Ointment of tartarized* or *tartarated antimony, Antimonial ointment, Tartar emetic ointment* (tartarated antimony, ℥ss; simple ointment, ℥j). If a drachm of this ointment be rubbed upon any part night and morning, it will excite in a few days a painful pustular eruption; hence it is employed as a counter-irritant. This preparation is also called *Unguentum tartari stibiati* or *emetici, Unguentum e tartaro stibiato, Adeps tartare stibii medicatus, Unguentum tartratis potassæ stibiati.* This method of employing the tartrate of antimony and potassium as a revellent is at times called *stibiodermic.* **U. antimo'nii potassiotartra'tis,** unguentum antimonii. **U. antimo'nii tartariza'ti,** U. antimonii. **U. antiper'nium,** an ointment for relief of chilblains; see *Antipernius.* **U. antipso'ricum Werlho'fii,** unguentum hydrargyri præcipitati albi. **U. a'quæ ro'sæ** (Ph. U. S.), *Ointment of rose-water, Cold cream* (expressed oil of almond, ℥v; spermaceti, ℥j; white wax, ℥j; rose-water, f℥iij); cooling to irritated surfaces. **U. arma'rium,** sympathetic unguent, for anointing the instrument that inflicted the wound. **U. arthani'tæ,** see *Arthanita.* **U. articula're,** synovia. **U. atro'piæ,** U. atropinæ (Ph. Br.), *Ointment of atropine* (atropine, gr. viij; rectified spirit, f℥ss; benzoated lard, ℥j); smeared around the eye to dilate the pupil. **U. basil'icon fla'vum,** ceratum resinæ. **U. basil'icon ni'grum,** unguentum resinæ nigræ. **U. basil'icum vir'ide,** unguentum subacetatis cupri. **U. belladon'næ** (Ph. U. S.), *Ointment of belladonna* (alcoholic extract of belladonna, gr. xlviij; diluted alcohol, f℥ss; benzoinated lard, gr. cccc) (alcoholic extract of belladonna, gr. l; benzoated lard, ℥j avoir.; Ph. Br.). **U. benzo'ini,** *Ointment of benzoin, Benzoated lard* (tinct. benzoin., ℥ij; adipis, ℥xvj). **U. cadmi'i io'didi,** *Ointment of iodide of cadmium* (cadmii iodid., gr. lxij; unguent. simpl., ℥j). **U. calami'næ** (prepared calamine, ℥j; benzoated lard, ℥v; Ph. Br.). **U. calomel'anos,** *Ointment of calomel, Ointment of subchloride of mercury* (calomel, gr. lxxx; prepared lard, ℥j); in chronic cutaneous affections. **U. calomel'-**

anos compos'itum, *Compound ointment of calomel* (calomel, ℥ij; burnt alum, ℥iv; carbonate of lead, ℥iv; Venice turpentine, ℥vj; spermaceti ointment, ℥iss); in scalled head and other chronic cutaneous affections. **U. canthar'idis,** blistering salve, *Ointment of cantharides* or of *Spanish flies, Blistering ointment* (cantharidis, ℥j; yellow wax, ℥j; olive oil, ℥vj; Ph. Br.). **U. ce'ræ,** *U. simplex, U. adipis, Unguentum* (Ph. U. S.), *Wax ointment, Ointment of lard, oil, and beeswax;* see *Unguentum.* (In the Ph. Br., under the name *Unguentum simplex,* it is prepared by melting together white wax, ℥ij; prepared lard, ℥iij; almond oil, f℥iij). Emollient; a mild dressing; also the basis of most of the compound ointments. **U. cera'tum,** ceratum Galeni. **U. cerus'sæ,** unguentum oxidi plumbi albi; unguentum plumbi subcarbonatis. **U. cerus'sæ aceta'tæ,** ceratum plumbi superacetatis; U. plumbi superacetatis. **U. ceta'cei,** *Spermaceti ointment* (cetacei, ℥v; ceræ albæ, ℥ij; ol. amydg., Oj, imp., or q. s.; benzoin, ℥ss; Ph. B.); ordinary dressing for blisters and excoriations; see *Ceratum cetacei.* **U. chrysaro'bini** (Ph. U. S.), *Chrysarobin ointment;* rub gr. xlviij chrysarobin with benzoinated lard, ℥j, gradually added, until they are thoroughly mixed. **U. citri'num,** U. de althæâ, U. hydrargyri nitratis. **U. coc'culi,** *Ointment of cocculus Indicus, Kernels of cocculus Indicus;* used to destroy vermin and to cure scabies and ringworm of the scalp. **U. coni'i,** *Ointment of conium* or *hemlock* (conii fol., adipis, āā ℔j); used for irritable tumors and ulcers. **U. con'tra sca'biem Werlho'fii,** unguentum hydrargyri præcipitati albi. **U. creaso'ti** (Ph. U. S.), *Ointment of creasote* (creasot., f℥j; unguent., ℥j); used in chronic cutaneous affections. **U. cu'pri subaceta'tis,** unguentum subacetatis cupri. **U. diach'ylon,** *Diachylon ointment* (lead plaster, gr. cclxiv; olive oil, gr. clxx; oil of lavender, ♏v); employed in eczema and profuse sweating of the feet. **U. diapomphol'ygos,** unguentum oxidi zinci impuri. **U. el'emi,** *Ointment of elemi* (elemi, ℥iv; simple ointment, ℥j; Ph. Br.); use same as the next. **U. el'emi compos'itum,** *Compound ointment of elemi, Balsam of Arcæus* (elemi, ℔j; terbinthinæ vulgaris, ℥x; sevi præparati, ℔j; olei olivæ, f℥ij); stimulant and digestive; to keep open issues, etc. **U. epispas'ticum for'tius,** cerate of cantharides. **U. epispas'ticum mi'tius,** unguentum lyttæ. **U. epispas'ticum vi'ride,** unguentum lyttæ medicatum. **U. eucalyp'ti** (oil of eucalyptus, ℥j; soft paraffin, hard paraffin, āā ℥ij). **U. fla'vum,** unguentum de althæâ. **U. gal'læ,** *Ointment of galls, Nutgall ointment* (nutgall, gr. xlviij; benzoinated lard, ℥j) (galls in fine powder, 80 grs.; benzoated lard, 1 oz.; mix; Ph. Br.); as an astringent in piles, indolent ulcers, etc. **U. gal'læ cum o'pio** (Ph. Br.), *U. gallæ et opii, Compound ointment of galls, Ointment of galls and opium* (ointment of galls, ℥j; opium, gr. xxxij); used in painful hemorrhoids: ℥ss or ℥j of camphor is sometimes added. **U. glyceri'ni plum'bi subaceta'tis** (glycerin of subacetate of lead, ℥ivss; soft paraffin, ℥xviij; hard paraffin, ℥vj) (Ph. Br.). **U. e gum'mi el'emi,** unguentum elemi compositum. **U. helleb'ori al'bi,** unguentum veratri. **U. Helmon'di** (hydrarg. ammoniat., ℥j; unguent. sulphuris, ℥j); employed in psoriasis of the scalp and face. **U. hydrar'gyri** (Ph. U. S.), *Mercurial ointment, Neopolitan ointment, Blue ointment* (mercury, ℥j; lard, ℥ss; suet, ℥ss; compound tincture of benzoin, ♏xl; mercurial ointment, gr. c). According to Ph. Br.: Mercury, prepared lard, āā ℔j; prepared suet, ℥j. **U. hydrar'gyri ammonia'ti** (Ph. U. S.), *Ointment of ammoniated mercury* (ammoniated mercury, gr. xlviij; benzoinated lard, ℥j) (ammoniated mercury, gr. l; simple ointment, gr. ccccl; Ph. Br.); used in cutaneous diseases. **U. hydrar'gyri cal'cis al'bæ,** unguentum hydrargyri præcipitati albi. **U. hydrar'gyri compos'itum,** *Compound ointment of mercury* (unguent. hydrarg., ℥vj; ceræ flav., ol. olivæ, āā ℥iij; camphor, ℥iss; Ph. Br.). **U. hydrar'gyri deutox'ydi nitra'ti,** unguentum hydrargyri nitrico-oxidi. **U. hydrar'gyri io'didi,** *Ointment of iodide of mercury* (hydrarg. iodid., ℥j; ceræ alb., ℥ij; adipis, ℥vj). **U. hydrar'gyri io'didi ru'bri,** *Ointment of red iodide of mercury* (hydrarg. iodid. rubr., gr. xvj; unguent., ℥j; Ph. Br.). Both these ointments may be applied to scrofulous and indolent ulcers. **U. hydrar'gyri nitra'tis** (Ph. U. S.), *Ointment of nitrate of mercury, Citrine ointment* (mercury, gr. ccccxliv; acid. nitric., f℥j, f℥v; lard oil, ℥xj) (mercury, ℥iv; nitric acid, f℥xij; prepared lard, ℥xv; olive oil, f℥xxxij; Ph. Br.); employed in a number of skin diseases and ulcerations, etc.; generally used diluted. **U. hydrar'gyri nitra'tis dilu'tum** (Ph. Br.) (nitrate of mercury, ℥j; soft paraffin, ℥ij). **U. hydrar'gyri ni'trico-ox'idi** (Ph. U. S.), *U. h. oxidi rubri, Ointment of nitric* or *red oxide of mercury, Red precipitate ointment, Golden ointment* (hydrarg. oxid. rubr., gr. xlviij; unguent., ℥j). In the Ph. Br. it is made by mixing red oxide of mercury, lxij; hard paraffin, ℥¼; soft paraffin, ℥¾; stimulant and escharotic; applied to foul ulcers, to inflammation of the tarsi, etc. **U. hydrar'gyri ox'idi fla'vi** (Ph. U. S.), *Ointment of yellow oxide of mercury* (yellow oxide of mercury, gr. xlviij; ointment, ℥j); the oxide is perfectly amorphous, without any crystalline grains, and is therefore adapted for application to the conjunctiva. **U. hydrar'gyri ox'idi ru'bri** (Ph. U. S.), unguentum hydrargyri nitrico-oxidi. **U. hydrar'gyri præcipita'ti al'bi,** U. hydrargyri ammoniati. **U. hydrar'gyri ru'bri,** U. hydrargyri nitrico-oxidi. **U. hydrar'gyri subchlo'ridi** (subchloride of mercury, gr. lxxx; benzoated lard, ℥j; Ph. Br.) **U. hydrar'gyri submuria'tis ammonia'ti,** U. hydrargyri præcipitati albi. **U. hydrar'gyri subnitra'tis,** U. hydrargyri nitrico-oxidi. **U. hydrar'gyri supernitra'tis,** U. hydrargyri nitratis. **U. hydrargyr'ici subnitra'tis,** U. hydrargyri nitrico-oxidi. **U. hydrar'gyro mit'ius dic'tum cine'reum,** unguentum oxidi hydrargyri cinereum. **U. ex hydrar'gyro oxyda'to ru'bro,** unguentum hydrargyri nitrico-oxidi. **U. infu'si mel'oës vesicato'rii,** U. lyttæ. **U. i'odi** (Ph. U. S.), *Ointment of iodine, Iodine ointment* (iodine, gr. xviij; iodide of potassium, gr. iv; water, ♏viij; benzoated lard, gr. ccccxx) (according to the Ph. Br., iodine, iodide of potassium, āā gr. xxxij; glycerin, f℥j; prepared lard, ℥ij); used as a local application to goitrous and other swellings. **U. io'dini,** U. iodi. **U. io'dini compos'itum,** *U. iodinii compositum, Compound ointment of iodine* (iodin., gr. xv; potassii iodid., gr. xxx; aq., ♏xxx; adipis., ℥j). **U. iodin'ii,** U. iodini. **U. iodofor'mi** (Ph. U. S.), *Iodoform ointment* (iodoform, gr. xlviij; benzoinated lard, ℥j) (according to the Ph. Br., iodoform, ℥j; benzoated lard, ℥ix). **U. irri'tans,** U. lyttæ. **U. lauri'num,** *Bay ointment* (fol. lauri., 500 p.; adip. suilli, 1000 p.; bay berries, 500 p.); corroborant and nervine; it is simply emollient. **U. leniti'vum,** U. de althæâ. **U. lilia'ceum,** ointment of lilies and some aromatic plants. **U. lithar'gyri,** unguentum diachylii albi. **U. lyt'tæ,** unguentum cantharidis. **U. melan'icum caus'ticum,** causticum Æthiopicum. **U. mercuria'le,** unguentum hydrargyri. **U. mercuria'le al'bum,** unguentum hydrargyri præcipitati albi. **U. mercuria'le citri'num,** unguentum hydrargyri nitratis. **U. mercu'rii ru'brum,** unguentum hydrargyri nitrico-oxidi. **U. e mercu'rio præcipita'to,** unguentum hydrargyri præcipitati albi. **U. meze'rei** (Ph. U. S.), *Ointment of mezereum, Mezereum ointment* (lard, gr. ccclx; yellow wax, gr. liv; fluid extract of mezereum, f℥ij); to keep open blisters, issues, etc. **U. nardi'num,** see *Nardus Indica.* **U. Neapolita'num,** unguentum hydrargyri. **U. nervi'num,** unguentum sambuci. **U. nitri'cum** or **oxygena'tum,** unguentum acidi nitrosi. **U. nu'tritum,** unguentum plumbi superacetatis. **U. ophthal'micum** (butyr. recent. aq. rosar. lavat., p. 68; camphor., p. 0.3; oxyd. hydrarg. rubr., acetatis plumbi, āā p. 4); in chronic inflammation of the conjunctiva or tarsi. **U. ophthal'micum ru'brum,** unguentum hydrargyri nitrico-oxidi. **U. o'pii,** *Ointment of opium* (opii pulv., ℈j; adipis, ℥j); to be used where the local application of opium by inunction is needed. **U. ox'idi hy-**

drar'gyri cine're'i, *Ointment of gray oxide of mercury* (oxyd. hydrarg. ciner., p. j; adipis suilli, p. iij); properties like the mercurial ointment. **U. ox'idi plum'bi al'bi,** *Ointment of white oxide of lead, White ointment* (ung. simplicis, p. v; oxyd. plumb. alb., p. j); cooling and desiccative; applied to excoriated and burnt surfaces. **U. ox'idi plum'bi carbona'ti,** U. plumbi subcarbonatis. **U. ox'idi zin'ci,** unguentum zinci. **U. ox'idi zin'ci impu'ri,** *Eyesalve, Tutty ointment, Ointment of impure oxide of zinc* (linim. simpl., p. v; oxyd. zinc. impur. præp., p. j); used in ophthalmia tarsi and atonic ophthalmia. **U. pi'cis liq'uidæ** (Ph. U. S.), *Tar ointment* (tar, ℥v; yellow wax, ℥ij; Ph. Br.) (tar and suet, equal parts); stimulant and detergent; used in tinea capitis and other cutaneous eruptions. **U. pi'cis ni'græ,** unguentum resinæ nigræ. **U. plum'bi aceta'tis** (acetate of lead, gr. xij; benzoinated lard, ℥j; Ph. Br.). **U. plum'bi carbona'tis** (Ph. U. S.), unguentum plumbi subcarbonatis, *Ointment of carbonate of lead* (carbonate of lead, gr. xlviij; benzoinated lard, ℥j); according to Ph. Br., carbonate of lead, gr. lxij; simple ointment, ℥j. **U. plum'bi compos'itum,** *Compound ointment of lead* (emp. plumbi, ℔ij; ol. oliv., f℥xviij; cret. præpar., ℥vj; acid. acet. dil., f℥vj); used as a dressing to flabby, indolent ulcers. **U. plum'bi io'didi** (Ph. U. S.), *Ointment of iodide of lead* (iodide of lead, gr. xlviij; benzoinated lard, ℥j); according to the Ph. Br., iodide of lead, gr. lxij; simple ointment, ℥j; used as eutrophic in chronic glandular and other swellings. **U. plum'bi ox'idi carbona'tis,** unguentum plumbi subcarbonatis. **U. plum'bi subaceta'tis compos'itum** (solution of subacetate of lead, f℥vj; camphor, gr. lx; white wax, ℥viij; oil of almonds, Oj). **U. plum'bi subcarbona'tis,** *U. plumbi carbonatis, Ointment of carbonate of lead;* used as a dressing for burns. **U. plum'bi superaceta'tis,** *Ointment of sugar* or *acetate of lead, Saturnine ointment* (acetate of lead, gr. xij; benzoinated lard, ℥j); cooling; desiccative. **U. plum'bici carbona'tis,** unguentum plumbi subcarbonatis. **U. popule'um** (fresh buds of the Populus nigra, 500 p., adeps suillus præp., 1500 p.; black poppy leaves, belladonna, hyoscyamus, black nightshade, āā 128 p.); anodyne; applied to local inflammations, hemorrhoids, sore nipples, cancer, etc. See *Populus.* **U. potas'sæ hydrioda'tis,** *Ointment of iodide of potassium* (potass. iod., gr. lx; aquæ, ♏xxx; adipis, gr. ccccxx; or potass. iodid., gr. lxiv; potassii carbonat., gr. iv; aquæ destillat., f℥j; adipis præparat., ℥j); rubbed on scrofulous glands, goitre, etc. **U. potas'sæ sulphura'tæ** (Ph. U. S), *Ointment of sulphurated potash* (potassæ sulphurat., gr. xxx; hard paraffin, ℥¼; soft paraffin, ℥¾; Ph. Br.). **U. potas'sii io'didi,** *Ointment of iodide of potassium* (iodide of potassium, gr. lx; hyposulphite of sodium, gr. v; boiling water, ♏xxx; lard, gr. cccc) (iodide of potassium, gr. lxiv; carbonate of potassium, gr. iv; water, f℥j; benzoinated lard, ℥j; Ph. Br.). **U. pul'veris mel'oës vesicato'rii,** cerate of cantharides. **U. resi'næ** (resin, in coarse powder, 4 p.; yellow wax, 2 p.; simple ointment, 8 p.; almond oil, 1 p.). **U. resi'næ fla'væ,** ceratum resinæ flavæ. **U. resi'næ ni'græ,** *Black basilicon, Black resin ointment, Ointment of pitch, Ointment of black pitch* (resin. nigr., ceræ flavæ, resinæ flav., āā ℥ix; olei olivæ, Oj); uses the same as those of ceratum resinæ or yellow basilicon. **U. resi'næ pi'ni sylves'tris compos'itum,** unguentum de althæâ. **U. resino'sum,** ceratum resinæ flavæ. **U. resumpti'vum,** unguentum de althæâ. **U. sabi'næ,** ceratum sabinæ. **U. sambu'ci,** *Green ointment, Elder ointment* (sambuci flor., ℔ij; adipis præp., ℔ij); emollient. **U. saturni'num,** unguentum plumbi superacetatis. **U. sim'plex,** ceratum Galeni; unguentum ceræ; unguentum. **U. sol'idum de cicu'tâ,** emplastrum cicutæ. **U. sperm'atis ce'ti,** unguentum cetacei. **U. staphisa'griæ,** ointment of staves-acre (stavesacre seeds, ℥iv; benzoinated lard, ℥viij; Ph. B.); used for parasitic skin diseases. **U. stramo'nii** (Ph. U. S.), *Ointment of stramonium, Stramonium ointment* (extract of stramonium, gr. xxviij; water, ♏xxx; benzoinated lard, gr. cccclxxx); anodyne ointment to irritable ulcers, hemorrhoids, etc. **S. subaceta'tis cu'pri,** *Ointment of subacetate of copper, Verdigris ointment* (cupri subacet., ℥j; ung. simpl., ℥xv); detergent and escharotic. **U. sulphura'tum alcali'num ad sca'biem,** *Helmerich's alkaline sulphurated itch ointment* (adip. præp., 800 p., sulphur. lot., 200 p.; carbonat. potass. pur., 100 p.); use same as the last. **U. sulphura'tum ad sca'biem** (adipis, 120 p.; sulph. lot., 60 p.; ammoniæ muriat., aluminæ sulphat., āā 4 p.); antipsoric. **U. sul'phuris** (Ph. U. S.) (rub sublimed sulphur, gr. cxxx; benzoinated lard, gr. ccc. According to the Ph. Br., sublimed sulphur, ℥j; benzoinated lard, ℥iv); *Sulphur ointment;* used chiefly in itch and some herpetic affections. **U. sul'phuris alkali'num** (Ph. U. S.), *Alkaline sulphur ointment* (washed sulphur, gr. xcvj; carbonate of potassium, gr. xlviij; water, ♏xxx; benzoinated lard, gr. cccxij). **U. sul'phuris compos'itum,** *Compound sulphur ointment, Itch ointment* (sulph. sublim., ℔ss; veratri rad., ℥ij; potassæ nitrat., ℥j; saponis mollis, ℔ss; adipis, ℔iss; ol. bergamot, ♏xxx. Unguentum sulphuris compositum of the older Ph. U. S. was made as follows: Sulphur, ℥j; hydrargyri ammoniat., acid. benzoic, āā ℥j; ol. bergamot., acid. sulphuric, āā f℥j; potassæ nitrat., ℥ij; adipis, ℔ss); use same as the last, but it is more stimulating. **U. sul'phuris io'didi,** *Ointment of iodide of sulphur* (iodide of sulphur, gr. xxx; hard paraffin, ℥¼; soft paraffin, ℥¾; Ph. B.); excellent application in chronic cutaneous affections. **U. tab'aci,** *Tobacco ointment* (tabac., ℥ss; adipis, ℥viij; aquæ, q. s.; applied to irritable ulcers, tinea capitis, etc. **U. tar'tari emet'ici,** U. antimonii. **U. tar'tari stibia'ti,** U. antimonii. **U. e tar'taro potas'sæ stibia'ti,** U. antimonii. **U. tartra'tis potas'sæ stibia'ti,** U. antimonii. **U. de terebin'thinâ et adip'ibus,** U. elemi compositum. **U. de terebin'thinâ et cerâ,** U. de althæâ. **U. terebin'thinæ,** *Ointment of turpentine* (oil of turpentine, f℥j; resin, gr. liv; yellow wax, prepared lard, āā ℥ss; Ph. Br.); uses the same as ceratum resinæ or yellow basilicon. **U. terebin'thinæ et ovo'rum vitel'li,** U. digestivum simplex. **U. tetraphar'macum,** basilicon; U. resinæ nigræ. **U. triphar'macum,** U. plumbi superacetatis. **U. tut'iæ,** U. oxidi zinci impuri. **U. vera'tri,** *U. veratri albi, White hellebore ointment* (veratr., ℥ij; adipis, ℥viij; olei limon, ♏xx); used in cases of itch where sulphur is objected to. **U. veratri'næ** (Ph. U. S.), *Ointment of veratrine, Veratrine ointment* (veratrine, gr. xx; alcohol, ♏xxx; benzoinated lard, gr. cccclxxx) (veratrine, gr. viij; hard paraffin, ℥¼; soft paraffin, ℥¾; olive oil, f℥j; Ph. Br.); to be rubbed on the part in neuralgic and other pains. **U. ad vesica'ta,** U. lyttæ. **U. ad vesicato'ria,** cerate of cantharides. **U. vesicato'rium,** ungentum lyttæ. **U. vir'ide,** unguentum subacetatis cupri. **U. zin'ci,** U. zinci oxidi. **U. zin'ci olea'ti** (oleate of zinc, ℥j; soft paraffin, ℥j; Ph. Br.); used in chronic eczema and other skin diseases. **U. zin'ci ox'idi** (Ph. U. S.), *Zinc ointment, Ointment of oxide of zinc* (oxide of zinc, gr. xc; benzoinated lard, gr. ccclx. In the Ph. B. it is made by adding oxide of zinc, gr. lxxx, to benzoinated lard, ℥j); use the same as that of unguentum tutiæ.

Un'gues adun'ci (hooked nails). See *Onychogryphosis.* **U. fibro'si,** condition of the nails in which they appear to have a fibrous structure.

Unguiculate, un-gwik'u-late (*unguis,* claw). Resembling a claw or hook.

Un'guis (nail). Hippocampus minor; nail; onyx; pterygion. **U. a'vis,** hippocampus minor. **U. involu'tus,** onyxis. **U. odora'tus,** blatta bysantia. **U. os,** *Lacrymal bone,* bone situate at the anterior and inner part of the orbit. It aids in the formation of the lacrymal gutter and the nasal duct.

Ungula caballina, un'gu-lah kab-al-le'nah (horse's hoof). Tussilago.

Ungulæ palpebrarum, un'gu-le pal-pe-brah'rum (hoofs of the eyelids). See *Tarsus.*

Un'gulate (*ungula,* a hoof). Having hoofs; a term applied to animals so constituted.

Unhealth'y. Sickly.

Unicellular, u-ne-sel'u-lar. One-celled.

Unicist, u'nis-ist. One who denies the existence of more than one specific virus, as in syphilis; opposed to dualist.

Unicorn (u'ne-korn) **root.** Aletris farinosa; Chamælirium luteum. **U. u'terus,** uterus having but one cornu, usually from atrophy of a Müller's duct.

Unilateral, u-ne-lat'er-al. Relating to one side.

Unilocular, u-ne-lok'u-lar (*unus,* one, *loculus,* cell). Having one cell or cavity; as bilocular means having two cells; multilocular, having many cells.

U'nio. Pearl.

Unioc'ulus (*unus,* one, *oculus,* eye). Having only one eye; cyclops; monoculus.

U'nion. Healing. **U. by first** and **sec'ond inten'tion,** see *Intention.*

Unipara, u-nip'ar-ah. Woman having but one child at a birth.

Uniparous (u-nip'ar-us) or **Unipariens,** u-ne-pah're-ens (*unus,* one, *pario,* to bring forth). Producing one child at a birth.

Unip'olar (*unus,* one, *polus,* pole). Usually applied to certain nerve-cells having but one projection, as opposed to bipolar.

Unisema deltifolia, u-nis'a-mah del-te-fo'le-ah (*unus,* one, *semen,* seed). *Shovel pickerel-weed, Pond shovel, Shovel-leaf, Water plantain.* Indigenous aquatic plant; root is emollient and astringent.

Unisep'tate. Having one septum.

U'nit of electric'ity. The unit quantities in electricity are expressed in terms of the units of length, mass, and time, and for scientific purposes these are taken as one centimetre, one gramme, and one second respectively (Steavenson and Jones). Thus the *unit of velocity* is one centimetre per second; the *unit of acceleration,* one unit of velocity, sometimes called a vel per second; that is, a velocity of one centimetre per second added per second. The *unit of force* is that force which, when acting on a mass of one gramme, gives it unit acceleration, or which, when acting on one gramme for one second, gives it a velocity of one centimetre per second, and is called one *dyne.* The *electrostatic unit of quantity* is that quantity which when placed at one centimetre from an equal and similar quantity repels it with the force of one dyne. This system is called the centimetre-gramme-second system of units (C. G. S.). For practical calculation and use these units are not of a convenient size: those of electromotive force and of resistance being inconveniently small and that of the current inconveniently large. A system of *practical units* has therefore been derived from these as follows: *U. of capacity,* that capacity which would require one coulomb to change it to one volt. See *U. of quantity.* One one-thousand-millionth of the absolute unit of capacity is called one *farad. U. of current,* the current which is given by an electromotive force of one volt acting through a resistance of one ohm; that is, one-tenth of an absolute unit is called one *ampère* (formerly known as one Weber). *U. of electromotive force,* the practical unit consists of one hundred million absolute units, and is called the *volt.* It is a little less than the electromotive force of one Daniell's cell. *U. of quantity,* one ampère for one second carries one *coulomb* of electricity past any point in the circuit, a coulomb being the quantity of electricity that passes in a second in a conductor which has the resistance of one ohm with one volt of electromotive force. Another unit of electricity is the quantity which would be carried by one ampère in an hour. This is called an ampère-hour and is equal to 3600 coulombs. *U. of resistance,* one thousand million absolute units is called the *ohm.* The Paris Congress of Electricians in 1884 defined a unit of resistance to be called a *legal ohm;* represented by the resistance of a column of pure mercury at 0° C., one square millimetre in section, and 106 centimetres long, and less than the true ohm by about 0.3 per cent. As these units are inconveniently great or small at times, certain prefixes are used to the names to denote multiples or submultiples of these quantities. Thus a *megohm* is one million ohms; a *microvolt* is one-millionth of a volt; a *microfarad* one-millionth of a farad; a *milliampère* is one-thousandth of an ampère, and is the unit of current used in medicine. **U. of heat,** the unit generally employed is the amount of heat required to raise the temperature of 1 kilogramme of water from 0° C. to 1° C. (For other units see *Weights and Measures* and *Metric system,* included under that head.)

U'nitary. Relating to, or having nature of, a unit. Also applied to monstrosities having the organs of a single individual.

Uni'ting band'age (*unus,* one). A bandage for bringing the edges of a wound into approximation. The arrangement of such a bandage differs according as the wound is transverse or longitudinal.

Univ'alent. Term applied to an element having an atomicity equivalent to one atom of hydrogen.

Univer'sal joint. Ball-and-socket joint.

Univ'ocal genera'tion (*unus,* one, *vox,* voice). See *Generation.*

Unoculus, u-nok'u-lus (*unus,* one, *oculus,* eye). Having one eye; cyclops; monoculus.

Uno'na polycar'pa. Cœlocline polycarpa.

Unor'ganized. Inorganic. See *Organic.*

Unsound'. Diseased; infirm; sickly.

Unsound'ness of mind. Disordered mental condition incapacitating the individual for management of his affairs.

Unstri'ated muscle. See *Muscle.*

Un'striped mus'cular fi'bre. See *Muscular fibre.*

Unto'mool. Tylophœa asthmatica.

Unwell'. See *Indisposition.* Term applied by the laity to the person menstruating.

U'pas. In the archipelagos of Molucca and Sunda, a vegetable poison used for poisoning arrows. The tree producing it is said to be the Antiaris or Ipo toxicaria. Another species of upas, *U. tieuté, Tshettik* or *Tjettek,* is the product of Strychnos tieuté, Upas antiar, like corroval and vao, South American arrow-poisons paralyzing the heart; while U. tieuté causes the most violent convulsions.

Up'land bone'set. Eupatorium sesilifolium. **U. su'mach,** Rhus glabra.

Up'per po'lar circle. Upper third of uterine cavity.

Urachal, u'rak-al (*urachus*). Relating to the urachus. **U. fold,** duplicature of peritoneum surrounding the urachus. **U. fos'sa,** see *Inguinal fossa.*

Urachus, u'rak-us (*ouron,* urine, *echo,* to contain). Remains of tubular canal existing in the embryo and connecting the cavity of the bladder with the allantois, gaining exit from the bladder by the umbilicus. In the adult it exists as a fibromuscular cord extending from the apex of the bladder to the umbilicus, *Ligamentum suspensorium urachi* or *vesicæ.*

Uracratia, u-rak-rat'e-ah (*ouron, akratos,* powerless). Enuresis.

Uracus, u'rak-us. Urachus.

Uræ'mia (*ouron, haima,* blood). *Urhæmia.* Certain morbid phenomena, implicating the nervous centres more especially, due to retention of excrementitious substances in the blood which are normally excreted by the kidneys, as in Bright's disease. The symptoms are those affecting the brain, as mania, delusional insanity, convulsions, coma, headache, etc., dyspnœa, and gastro-intestinal complications.

Uræ'mic. Relating to uræmia.

Ura'li. Curare.

Uralium, u-ral'e-um. Combination of urethan and chloral hydrate, having hypnotic action.

U'rana. Ureter.

U'rane. Urinal.

Uranisconitis, u-ran-is-kon-e'tis (*uraniscus,* palate, *itis*). Inflammation of the palate.

Uraniscoplasty, u-ran-is'ko-plas-te (*ouraniskos,* canopy, *plastikos,* forming). *Uraniscoplastice.* Operation for repair of fissure in the hard palate.

Uraniscorrhaphia, u-ran-is-kor-rhaf'e-ah (*uraniscus, rhaphe,* suture). Staphylorraphy.

Uraniscus, u-ran-is'kus (*uraniskos,* a canopy). Palate.

Ura'nium. A rare metal obtained from certain minerals. Nitrate of uranium is used in spray form as an astringent in throat affections; also internally as an antidiabetic.

Uranoma'nia (*ouranos*, heaven, *mania*). Species of megalomania, or delirium of grandeur, referring to a heavenly origin, etc.

U'ranoplasty. Uraniscoplasty.

Uranorrhaphia, u-ran-or-rhaf'he-ah. Staphylorrhaphy.

Uranoschisis, u-ran-os'kis-is (*uraniscus, schisis*, separation). Cleft palate.

U'ranus (*ouranos*, canopy). Palate.

Uraposte'ma (*ouron, apostema*, abscess). Tumefaction caused by escape of urine; abscess containing urine.

Ura'ri. Curare.

Ura'rin. Curarine, active principle of curare.

U'ras. Urate.

U'rate. *Lithate.* A generic name for salts formed by the combination of uric or lithic acid with different bases. Urate or lithate of sodium, for example, is found in arthritic and certain urinary concretions; urate or lithate of ammonium in certain urinary deposits. The urate of ammonium, ammonii uras, is used externally as an ointment in chronic cutaneous affections. The urate of quinia, a soluble yellow salt, has been employed in intermittents. See *Calculi, urinary,* and *Urine, examination of.*

Uratosis, u-rat-o'sis. Deposition of crystalline urates in the tissues or fluids of the body.

Ure'a (*ouron*). A white, pearly, brilliant substance, in transparent plates, inodorous, and of a cool taste; very soluble in water; deliquescent, and soluble in alcohol. A carbamide, $CO(NH_2)_2$, carrying off the largest quantity of all the nitrogen taken in the food. Principal solid constituent of urine, and also found in several animal fluids, as chyle, blood, lymph, etc., and in muscular tissue. See *Urine, examination of.*

Ure'al. Relating or appertaining to urea.

Ureameter, u-re-am'et-ur. Apparatus for estimating amount of urea in urine.

Urecchysis, u-rek'is-is (*ouron, ecchusis*, effusion). Effusion of urine into the areolar tissue.

Urechites (u-rek-e'tees) **suberec'ta.** *Savannah flower, Yellow nightshade.* Poisonous plant indigenous to Jamaica, with effects similar to strophanthus.

Urechitin, u-rek-e'tin. Toxic glucoside obtained from leaves of Urechites suberecta.

Urechitoxin, u-rek-e-toks'in. Product of leaves of Urechites suberecta, decidedly toxic in effect, and recommended as an antidote to curare.

Uredo, u-ra'do (*uro*, to burn). Urticaria.

Urelcosis, u-rel-ko'sis (*ouron, helkos*, ulcer). Ulcerative urethritis.

Urema, u-ra'mah. Urine.

U'ren. Urea.

Uren'ium. Urea.

U'rens (*uro*, to burn). Caustic.

Ureorrhœa, u-ra-or-rhe'ah (*ouron, rheo*, to flow). Diabetes.

Uresiæsthesis, u-res-e-ees-tha'sis (*ouresis, aisthesis*, feeling). The desire to pass water.

Uresis, u-ra'sis (*ouresis*). Micturition.

Ureter, u-re'ter. A cylindrical fibromuscular tube, one on each side of the body, sixteen to eighteen inches in length, which conveys the urine from the kidney to the bladder. It extends obliquely between the pelvis of the kidney and the *bas-fond* of the bladder, into which it opens. It enters the bladder at the posterior angle of the trigone vesical.

Ureteral'gia (*ureter, algos*, pain). Pain in the course of the ureter—as from calculus, *Ureteralgia calculosa.*

Ureteric, u-re-ter'ik. Relating to the ureter.

Ureter'icus (*ureter*). An epithet for ischury, etc. arising from an affection of the ureter.

Ureteri'tis (*ureter, itis*). Inflammation of the ureter; generally caused by calculus.

Ure'terolith (*ureter, lithos*, stone). Calculus in the ureter.

Ureterolithicus, u-ret-er-o-lith'ik-us (same etymon). Ischury or other affection caused by a stone in the ureter.

Ureterolysis, u-ret-er-ol'is-is (*ureter, lusis*, solution). Rupture of the ureter.

Ureterophlegmasia, u-ret-er-o-fleg-maz'e-ah (*ureter, phlegmasia*, inflammation). Ureteritis.

Ureterophlegmatic, u-ret-er-o-fleg-mat'ik (*ureter, phlegma*, phlegm). Term applied to any affection caused by mucus accumulated in the ureter.

Ureteropyicus, u-ret-er-o-pe'ik-us (*ureter, puon*, pus). Relating to an affection caused by the presence of pus in the ureter.

Ureteropyosis, u-ret-er-o-pe-o'sis (*ureter, puon*, pus). Suppuration in the ureter.

Ureterorrhag'ia (*ureter, rhage*, rupture). Hemorrhage from the ureter.

Ureterostenoma, u-ret-er-o-sten-o'mah (*ureter, stenos*, narrow). Narrowing of the ureter.

Ureterostomat'ic (*ureter, stoma*, orifice). Dependent upon obstruction of the orifice of the ureter.

Ureterothromboï'des (*ureter, thrombos*, a clot, *eidos*, resemblance). Ischury from grumous blood in the ureter.

Ureterotomy, u-re-ter-ot'o-me (*ureter, tome*, incision). Incision in the ureter.

Ure'thane. Ethyl carbamate. Carbonate of ethylic ether, produced by action of nitrate of urea on ethyl alcohol; occurring in crystals or crystalline masses, and asserted to be antispasmodic in tetanus and eclampsia; hypnotic and antipyretic. Also employed as an antidote for strychnia-poisoning.

Ure'thra (*oureo*, to pass the urine). Excretory duct for the urine in both sexes and for the sperm in man. In the latter it is eight or ten inches long, and extends from the neck of the bladder, ostium vesicale, to the extremity of the penis. In the male urethra three portions are distinguished: 1. Prostatic portion, traversing the prostate gland. 2. Membranous portion, between layers of triangular ligament. 3. Spongy portion, within corpus spongiosum urethræ. Before opening externally, the canal has a dilatation called the fossa or fovea or fossicula navicularis or Morgagnii. The urethra is lined in its whole extent by a mucous membrane, on which are seen, particularly at the bulb, the orifices of a number of follicular ducts, lacunæ or sinuses or foramina of Morgagni, proceeding from or constituting the glands of Morgagni or of Littré. About an inch and a half from the opening of the meatus one of these lacunæ is generally found much larger than the rest, and is named lacuna magna. The female urethra is about an inch and a half long. It is very wide at its commencement, termimating at the top of the external aperture of the vagina by the meatus urinarius.

The following measurements of the female urethra have been recently made (Vierordt):

Length	34 (27–40) mm.
Breadth	7
Thickness of wall	5
Bulbi vestibuli (when veins are in an injected condition)	30–35 long.
Glands of Bartholin:	
Length	14–16
Breadth	9–11
Thickness	5–7
Excretory duct	15–18 long.

Ure'thra, blind ducts of the. Mucous lacunæ of the urethra. **U., stric'ture of the,** see *Urethrostenosis.* **U., vas'cular tu'mor of,** *Urethral hemorrhoid* or *polypus;* small scarlet, extremely sensitive, spongy vegetation at the opening of the female urethra; see *Hemorrhoids.*

Ure'thral. Relating to the urethra. **U. chan'cre,** see *Chancre.* **U. fe'ver,** see *Fever, urethral.* **U. hem'orrhoids,** urethra, vascular tumor of. **U. pol'ypus,** urethra, vascular tumor of. **U. rheum'atism,** see *Rheumatism, urethral.* **U. shock,** rigor and collapse following urethral operation or catheterization.

Urethralgia, u-re-thral'je-ah (*urethra, algos*, pain). Pain in the urethra; gonorrhœa.

Urethra'lis. Urethral. Ischio-urethralis muscle.

Urethram'eter (*urethra, metron,* measure). Instrument used in measuring the calibre of the urethra.

Urethremphraxis, u-re-threm-fraks'is. Obstruction of the urethra.

Urethri'tis (*urethra, itis*). Inflammation of the urethra; gonorrhœa.

Urethroblennorrhœa, u-re-thro-blen-nor-rhe'ah (*urethra, blenna,* mucus, *rheo,* to flow). Gonorrhœa; gleet.

Urethrocele, u-re-thro-se'le (Eng. u-re'thro-seel) (*urethra, kele,* tumor). Pouch-like thickening or protrusion of mucous membrane of female urethra, having the appearance of a tumor, and leading at times to ulceration and vesical catarrh.

Urethrocystauchenotomia, u-re-thro-sis-tauk-en-o-tom'e-ah (*urethro, kustauchen,* neck of the bladder, *tome,* incision). See *Lithotomy.*

Urethrocysteo-aneurysmatotomia, u-re-thro-sis'te-o-an-u-riz-mat-o-tom'e-ah (*urethra, kustis,* the bladder, *aneurusma,* dilatation, *tome,* incision). See *Lithotomy.*

Urethrocysteotrachelotomia, u-re-thro-sis-te-o-trak-e-lo-tom'e-ah (*urethra, kustis,* the bladder, *trachelos,* neck, *temno,* to cut). See *Lithotomy.*

Urethrohæmorrhagia, u-re-thro-hem-or-rhaj'e-ah (*urethra, haima,* blood, *rhegnumi,* to break forth). Hemorrhage from the urethra.

Urethrophraxis, u-re-thro-fraks'is (*urethra, phrasso,* to obstruct). Obstruction of the urethra.

Urethroplastic, u-re-thro-plas'tik (*urethra, plasso,* to form). An epithet for a plastic operation, *Urethroplasty,* which supplies defects in canal of urethra.

Ure'throplasty. See *Urethroplastic.*

Urethrorraphy, u-re-thror'raf-e. Urethrorrhaphy.

Urethrorrhagia, u-re-thror-rhaj'e-ah (*urethra, rhegnumi,* to break forth). Hemorrhage from the urethra.

Urethrorrhaphy, u-re-thror'rhaf-e (*urethra, rhaphe,* suture). The operation of closing a urethral fistula by suture.

Urethrorrhœ'a (*urethra, rheo,* to flow). Discharge of any kind from the urethra.

Ure'throscope (*urethra, skopeo,* to examine). Form of endoscope on the principle of the ophthalmoscope, etc., for inspecting the interior of the urethra.

Ure'throscopy. Inspection of the interior of the urethra by means of the urethroscope.

Urethrospasm, u-re'thro-spazm. Spasm of the urethra.

Urethrosteno'sis (*urethra, stenosis,* narrowness). Stricture of the urethra; may be spasmodic or organic. Organic stricture is caused by the contraction of inflammatory deposit upon, within, or beneath the mucous membrane, or of the cicatrix of a ruptured or injured urethra; the former being simple organic stricture, the latter traumatic or cicatricial stricture. Other varieties are described, as whipcord, ring, bridle, and ribbon strictures.

Ure'throtome (*urethra, tome,* incision). An instrument for dividing strictures of the urethra.

Urethrot'omy, Section of urethra for removal of stricture. **U., exter'nal,** division of stricture by external section into the urethra. **U., inter'nal,** division of stricture by internal section of urethra.

Urethrovaginal, u-re-thro-vaj-i'nal. Relating to the urethra and vagina, as urethrovaginal fistula.

Urethrymeno'des (*urethra, hymen,* a membrane). Caused by a membrane formed in the urethra.

Ure'tic (*ouretikos*). Diuretic; urinary.

Uretics, u-ret'iks (*ouron,* urine). Medicines which influence the urinary secretion.

Uretra, u-re'trah. Urethra.

Uretris, u-ra'tris (*ouretris,* a urinal). Urinal.

Ureum, u-ra'um. Urea.

Urginea scilla, ur-jin'e-ah sil'lah. Scilla.

Urhæ'mia. Uræmia.

Urhelko'sis. Ulcerative urethritis.

Urhidro'sis. Urinous sweating.

U'rias. Urinary fistula; urethra.

Uriasis, u-re'as-is. Lithiasis; uresis.

Uric acid, u'rik as'id. *Lithic, Urylic, Calculous, Bezoärdic, Lithiasic,* or *Lithenic acid.* Dibasic acid normal in urine, chiefly as sodium acid urate, average amount being 0.05 per cent. of urine voided; also found in combination with potassium, ammonium, calcium, and magnesium. It crystallizes most often in wedge-shaped crystals; other forms resemble barrels, sheaves, rosettes, combs, etc.; soluble in 15,000 parts of water, insoluble in alcohol. It is found in the excrement of some animals, as birds, molluscs, and insects, and solid urine of serpents, and in Peruvian guano. It is the principal eliminant of nitrogen next to urea. See *Calculi, urinary,* and *Urine, examination of.* **U. ac'id diath'esis,** lithæmia. **U. ac'id show'ers,** occasional increase of amount of uric acid in chronic gout. **U. ox'ide,** *Xanthic oxide, Xanthine, Urous acid;* substance first discovered in urinary calculus; more recently has been found as a normal, though scanty, constituent of urine, muscles, liver, spleen, and thymus gland. It is a colorless powder, insoluble in water, alcohol, and ether, but readily dissolves in dilute acids and alkalies.

Uricæmia, u-rik-e'me-ah (*uric acid, haima,* blood). Condition of the blood in which there is presumed to be an excess of uric acid.

U'ricum. Urea.

U'ricus. Urinary.

Uridro'sis (*ouron, hidros,* sweat). Urinous sweating, as in cholera, uræmic poisoning, etc.

Uri'na. Urine. **U. cerebel'la,** urine of whitish appearance, of a color similar to that of the brain or cerebellum. **U. ci'bi** or **chy'li,** urine secreted after digestion of a full meal. **U. crystal'lina,** deposit of crystalline substance on the skin from urinous sweat. **U. diabet'ica,** diabetic urine. **U. febri'lis,** urine, febrile. **U. furfura'cea,** see *Furfuraceous.* **U. galacto'des,** urine of a milky color. **U. genita'lis,** sperm. **U. jumento'sa** or **jumenta'ria,** urine, jumentous. **U. muco'sa,** cystirrhœa. **U. nephelo'des,** cloudy urine. **U. pericar'dii,** see *Pericardium.* **U. po'tûs,** urine secreted after ingestion of fluids. **U. san'guinis,** urine which is of average density secreted independently of immediate stimulus of food and drink, as after a night's rest. **U. uroboï'des** or **orobo'des,** see *Oroboïdes.* **U. vac'cæ,** urine, cow's.

Urinaculum, u-rin-ak'u-lum. Urachus; urinal.

Uri'næ profu'vium (a flux of urine). Diabetes. **U. stillicid'ium,** strangury. **U. substil'lum,** strangury. **U. suppres'sio,** retention or suppression of urine; see *Urination.*

Urinæmia, u-rin-e'me-ah (*ouron,* urine, *haima,* blood). Presence of urinary materials in the blood.

U'rinal. Name given to certain vessels used to pass the urine into, and to reservoirs of different shapes and character adapted to the penis in incontinence of urine, and intended to receive the urine as it flows off.

Urina'lis. Diuretic; urinary.

Urina'ria. Antirhinum linaria; Leontodon taraxacum.

U'rinary. That which relates to the urine. **U. appara'tus,** urinary organs. **U. blad'der,** *the Bladder;* a musculomembranous reservoir situate in the hypogastric region, between the rectum and pubis in man, and between the pubis and vagina in the female. Its upper region is covered by the peritoneum posteriorly. Its lower region is bounded, anteriorly, by the prostate in man, and rests on the vesiculæ seminales and rectum; in the female it corresponds to the vagina. The lowest portion of this organ bears the name bas-fond, in which the ureters open and the urethra commences; the triangular space which the apertures of these three canals leave between them is termed *Vesical triangle, Trigonus* or *Trigonum vesicæ* or *Lieutaudi, Corpus trigonum.* The anterior surface of the bladder is not covered by peritoneum. It is attached to the symphysis pubis by a fibrocellular expansion, the anterior ligament. The posterior ligaments or rectovesical folds are duplicatures of peritoneum on its posterior surface, extending from this surface to the rectum in the male and the uterus in the female. The bladder is composed of four coats—serous, muscular, submucous, and mucous. In the neck of the bladder there is, at its lower part, a more or less prominent tubercle, the *Vesical uvula,*

Uvula vesicæ, Valvula vesico-urethralis or *pylorica*. The following facts are of interest (Vierordt):

Weight of bladder and ureters, 193 g. (E. Bischoff).
Height (from fundus to vertex) . . . 50–100 mm.
Breadth 40– 90
Antero-posterior thickness 40– 70
Natural capacity (in the living) . . . 200–400 c.cm. (Krause).

	Men.	Women.	
When urine is retained intentionally,	710	650	average figures (Hoffmann).
According to examinations of cadavers,	735	680	

Wall when contracted . . . . . 15 mm. (Luschka), 12 thick.
" when moderately distended 3–4, at trigonum 6
Mucous membrane 0.1
Epithelium 0.06–0.1
Acinous glands . . . . . 0.09–0.54 in size.

U. cal'culi, the calculi which form in the urinary passages; see *Calculi, urinary*. **U. depos'it**, solid particles of urine precipitated by reagents or which settle to the bottom of a vessel after standing for a few hours. **U. fever**, fever, urethral. **U. fis'tula**, abnormal communication between the urinary passages and external surface. Urine sometimes finds an outlet through it. **U. or'gans**, *Urinary apparatus;* organs concerned in formation of urine—the kidneys; also the bladder and urinary passages. **U. pas'sages**, aggregate of canals and cavities containing the urine and conveyit externally; composed of excretory ducts, forming the tubular portion of the kidney—calices, pelvis, ureters, bladder, and urethra.

Urination, u-rin-a'shun (*urina*, urine). *Micturition.* The act of passing water; also morbid frequency of passing the water. Urination may become pathologically interesting from abnormal change in this function as regards volume, continuity, or direction of the stream passed. It may thus become sometimes uncontrollable, or perhaps entirely checked, so that it may become impossible, as shown in the following table (E. Hurry Fenwick):

I. Abnormal Urination.

- Abnormal urination.
  - Alterations in the volume of the stream (size of efflux).
    - Sense of obstruction developing suddenly.
      - Gonorrhœa.
      - Acute prostatitis.
      - Impaction of stone in urethra.
      - Congested senile prostate.
    - Sense of obstruction developing gradually.
      - Onanitic prostate.
      - Chronic prostatitis.
      - Stricture.
      - Chronic lesions of spinal cord.
      - Stone in the bladder.
      - Orificial valves of mucous membrane.
      - Stone in urethra.
      - Senile enlargement of prostate.
      - Pelvic tumors.
  - Alterations in the continuity of the stream (interruption of efflux).
    - Efflux arrested suddenly.
      - Stone, clot, pedunculated growth, foreign body.
      - Spasm.
    - Efflux arrested intermittently.
      - Atony, muscular or nervous.
      - Muscular enfeeblement of fever or old age.
  - Alterations in the direction of the stream (the parabola).
    - Stream bifid. — Stricture.
    - Stream vertical. — Enlarged prostate.

II. Impossible Urination.

- Impossible urination (no urine passed).
  - Suppression of urine.
    - Non-obstructive.
      - Renal disease.
      - Shock.
      - Septicity.
      - Hysteria.
      - Reflex causes.
      - Injury to one kidney.
    - Obstructive. — Ureteral obstruction.
  - Retention of urine.
    - Peritonitis.
      - Rectal collections.
      - Pelvic growths; hydatids.
      - Soft malignant prostatic growths.
    - Fevers.
      - Acute prostatitis.
      - Congested stricture.
      - Impacted stone in children.
      - Ruptured urethra.
    - Pressure on bladder neck.
    - Urethral obstruction.
    - Reflex spasmodic action. — Anal and hernial operations, etc.
    - Nerve lesions.
      - Acute myelitis.
      - Tabes.

III. Uncontrollable Urination.

- Uncontrollable urination.
  - Irrepressible urination.
    - Inflammatory.
    - Cystospastic reflex.
    - Chorea (?).
  - Involuntary urination.
    - Childhood.
      - True incontinence.
        - Sphincter paresis.
        - After perineal lithotomy.
      - False incontinence.
        - Nocturnal.
        - Dirty habits.
        - Reflex conditions.
          - Worms; polypus of rectum; over-acid or alkaline urine.
          - Phimosis.
    - Adult life up to fifty.
      - True incontinence.
        - Operative injury of sphincter.
        - Advanced tuberculosis of bladder with sphincteric impairment.
        - Other forms of sphincteric impairment.
        - Injury or disease of spinal cord and brain abolishing sphincter power.
      - False incontinence.
        - Nocturnal.
        - Ataxia with detrusor paresis.
        - Tight stricture.
        - Intoxication.
    - Old age.
      - True incontinence.
        - Unsymmetrical enlargement of prostate.
      - False incontinence.
        - Nocturnal.
        - Overflow of an atonic bladder from prostatic obstruction.

The influence of the nervous system and of arterial pressure on the secretion of urine is well exhibited in the following table (Kirkes):

Secretion of urine may be increased—

a. By increasing the general blood-pressure, by
1. Increase of the force or frequency of heart-beat.
2. Constriction of the small arteries of areas other than that of the kidney.

b. By increasing the local blood-pressure, by relaxation of the renal artery, without compensating relaxation elsewhere; by
1. Division of the renal nerves (causing polyuria).
2. Division of the renal nerves and stimulation of the cord below the medulla (causing greater polyuria).
3. Division of the splanchnic nerves; but the polyuria produced is less than 1 or 2, as these nerves are distributed to a wider area, and the dilatation of the renal artery is accompanied by dilatation of other vessels, and therefore with a somewhat diminished general blood-supply.
4. Puncture of the floor of the fourth ventricle or mechanical irritation of the superior cervical ganglion of the sympathetic, possibly from the production of dilatation of the renal arteries.

Secretion of urine may be diminished—

a. By diminishing the general blood-pressure, by
1. Diminution of the force or frequency of the heart-beats.
2. Dilatation of capillary areas other than that of the kidney.
3. Division of spinal cord below the medulla, which causes dilatation of the general abdominal area, and urine generally ceases being secreted.

b. By increasing the blood-pressure, by stimulation of the spinal cord below the medulla, the constriction of the renal artery which follows not being compensated for by the increase of general blood-pressure.

c. By constriction of the renal artery, by stimulating the renal or splanchnic nerves or the spinal cord.

Sometimes the urine, in health and disease, exhibits appearances that have received special names. Thus, that which is characterized by a deficiency of solid matters generally has been called hydruria; by a deficiency of urea, anazoturia; by a superabundance of urea, azoturia; by the presence of albumin, albuminuria; by greater density, baruria. Urine in which the deposit consists of lithic acid and the lithates has been termed lithuria; that in which the deposit consists of the earthy and earthy alkaline phosphates, phosphuria, ceramuria (*ceramos*, potter's earth), etc. At times a pellicle forms on the surface (cremor urinæ), which consists of mucus and some salts; at others there is a cloud (nubecula, nubes) toward its upper part, which is sometimes suspended, as it were, about the middle of the liquid. Occasionally there is a sediment. See *Calculi, urinary*, and *Urine, examination of*.

Human urine was at one time considered aperient, and was given in jaundice, in the dose of one or two ounces. Cow's urine, *Allflower water*, was once used warm from the cow as a purge, in the dose of Oss.

Urinato'rium (*urina*). Urinal.

U'rine (*ouron*). Excrementitial fluid secreted by the kidneys in which effete nitrogenized products are thrown out from the system. Urine is transparent, of a citron-yellow color, of a peculiar odor, and of an acid, saline, and slightly bitter taste. That which is passed some time after taking fluid is less colored, and less odorous and dense, than that which is voided some time after eating.

The following are the ordinary constituents of healthy human urine: urea, uric acid, hippuric acid; extractive matters, embracing alcohol extract, spirit extract, and water extract, with their respective constituents; mucus; brown coloring matter of the urine (hæmaphæin); red coloring matter of the urine (uro-erythrin); kreatinin, xanthin, sarkin, oxalic acid, oxaluric acid, aromatic ethylsulphuric acid, sulphocyanic and succinic acids; sugar, lactic acid; chlorides, phosphates, and sulphates of potassium, sodium, ammonium, calcium, magnesium; iron, silicic acid, nitrites and nitrates; also peroxide of hydrogen. The proportion of solid matters in 1000 parts of urine may vary from 30 to 70 and upward. The average composition of urine is affected by the water and food taken, amount of labor—mental or physical—time of day, age, sex, temperature of the air, etc. Urine also contains gaseous matter, equal to about 1 per cent. by volume; of this, chiefly carbon dioxide, 88 per cent.; nitrogen, 11 per cent.; and oxygen, 1 per cent.

The following table shows the average composition of urine and amount of each constituent voided daily:

			Voided per day. Grains.	Grammes.
Water	950			
Urea	28		520.80	35.00
Uric acid	0.60	Organic matter, 37.60.	11.16	0.75
Hippuric acid	0.35		6.51	0.44
Creatinine	0.65		12.09	0.81
Extractives	8.00		148.80	10.00
Sodium chloride	8.00		148.80	10.00
Phosphoric acid	2.00	Inorganic 12.40.	37.20	2.50
Sulphuric acid	1.25		23.45	1.56
Lime (CaO)	0.25		4.65	0.31
Magnesia (MgO)	0.30		5.58	0.37
Potash (K_2O) and soda (Na_2O)	0.60		11.16	0.75
Total	1000.00		930.20	62.49
Water	950.00			
Organic matter	37.60		699.36	47.00
Inorganic matter	12.40		230.64	15.49

The average quantity of urine voided in twenty-four hours is from forty to sixty fluidounces.

Urine, anæmic, denotes the form of urine that occurs in anæmia, chlorosis, etc. **U., ar'dent**, urine that is hot or of a deep-red color. **U., black**, melanuria. **U., blood'y**, hæmaturia. **U., chy'lous**, chyluria. **U., crude**, urine that is thin, transparent, and but little colored, affording neither cloud nor deposit. **U., cystin'ic**, urine containing cystine or cystic oxide in solution or as a deposit. **U., diabet'ic**, *Saccharine urine;* urine passed in *Diabetes mellitus, Mellituria*, or *Glycosuria*, containing glucose which may be separated in the form of crystals. The quantity of urine voided in diabetes mellitus is usually greater in health, and the normal urinous odor is generally absent. It is pale, limpid, of sweet taste, specific gravity usually ranging between 1030 and 1050, and even 1060. Glucose may be present, varying from a trace up to 10–12 per cent., and even 14 per cent. See *Diabetes* and *Urine, examination of* (for detection of sugar). **U., drop'sical**, ammoniacal urine, often containing much albumin and scarcely any urea. **U., dyspep'tic**, has been found to precipitate tannin abundantly and to putrefy quickly.

U'rine, examina'tion of. The examination of urine includes the complete study of that fluid, either normal or abnormal, in all its various relations. The following facts are to be investigated (after Simon):

I. *Points to be considered in the analysis of urine.*—These are: 1. Color, odor, general appearance—whether clear, smoky, cloudy, turbid, etc. 2. Reaction: whether acid, neutral, or alkaline to test-paper. 3. Specific gravity. 4. Total amount of organic and inorganic solids. 5. Total amount of inorganic matter (ash). 6. Determination of urea. 7. Determination of uric acid. 8. Determination of inorganic acids and bases (hydrochloric, sulphuric, and phosphoric acids; sodium, potassium, calcium, magnesium, and iron). 9. Determination of albumin. 10. Determination of sugar. 11. Examination for bile. 12. Examination of any organic or inorganic sediment, either by chemical means or by the microscope. Samples of urine should always be drawn from the well-mixed and exactly-measured quantity of the total urine discharged in twenty-four hours.

1. *Color.*—Reddish and smoky tint generally indicates the presence of blood, and a brownish-green suggests the presence of the coloring matter of bile—the normal coloring matters. The amount of indican is small, but it is increased in a number of diseases. The most convenient test is made by mixing equal volumes of urine and hydrochloric acid in a test-tube, and adding drop by drop a filtered solution of bleaching-powder until a green, violet, or blue color is noticed. Normal urine shows a green color

only, while a violet-red or intense blue color indicates the presence of indican. By shaking the contents of the test-tube with a little chloroform, the indican is absorbed by the latter, imparting to it a distinct blue color. If the urine should contain albumin, this must be separated before applying the test. Abnormal coloring matters are chiefly those of blood, bile, and of certain vegetables; rhubarb and senna leaves cause a reddish-yellow to deep-red color, especially in alkaline urine; santonin produces a bright-yellow color, changing to red or crimson on the addition of an alkali. Carbolic acid introduced into the system causes a dark, or even black, discoloration of urine. The coloring matters of blood may be recognized by adding to a few drops of urine a drop of freshly prepared tincture of guaiacum and agitating with a solution of ozonized ether (ethereal solution of hydrogen dioxide); the latter is colored blue in case hæmoglobin is present. In place of ozonized ether, oil of turpentine which has been in contact with atmospheric air for some weeks may be used, and the test made by allowing urine to flow down the test-tube containing a mixture of the oil and tincture; a blue coloration, slowly appearing at the juncture of the liquids, indicates the presence of blood.

2. *Odor.*—The normal odor of fresh urine is sometimes spoken of as aromatic. The ammoniacal and putrescent odor of urine after standing is due to the products of decomposition, chiefly ammonia. Aromatic substances taken internally especially impart an odor to the urine; oil of turpentine, cubebs, copaiba, asparagus, garlic, valerian, and other substances promptly transfer their odor to the urine of persons using these articles internally.

3. *Reaction.*—This is generally acid in healthy urine recently passed, but may become neutral or alkaline within a short period by decomposition of urea and formation of ammonium carbonate. The acid reaction is due chiefly to free uric and hippuric acids, and also to acid phosphates of sodium and potassium. Urine may show a neutral or even alkaline reaction; in many cases the latter points to decomposition of urea in the bladder, but it may be due also to the elimination of alkaline carbonates from food taken or drugs administered.

4. *Specific Gravity.*—The normal specific gravity is about 1.020, but it varies, even in health, from 1.012 to 1.030 or more. A specific gravity above 1.030 may indicate the presence of sugar, larger quantities of which may cause it to rise to 1.050. Albuminous urine is frequently of low specific gravity, 1.010 to 1.012. The specific gravity of urine, considered separately from the quantity of urine passed in twenty-four hours, is of no value, and in some diseases (as acute nephritis with albuminuria) the specific gravity of albuminous urine may be as high as 1.030, while a diabetic urine may have a specific gravity of 1.025 or less, in consequence of a large volume passed. The specific gravity of urine is generally determined by the urinometer, a small hydrometer which can only give correct results at a certain degree of temperature, generally marked upon the instrument.

5. *Determination of Total Solids.*—The last two figures of the specific gravity of urine, multiplied by 2.2, correspond to the number of grams in 1000 c.c. of urine. If, for instance, 1750 c.c. of urine of a specific gravity of 1.018 have been discharged in twenty-four hours, then the quantity of total solids in 1000 c.c. will be 18×2.2, or 39.6 grams; and in 1750 c.c. 69.3 grams. This is a sufficiently exact method, but more minute ones are sometimes employed.

6. *Determination of Inorganic Constituents.*—The platinum dish containing the known quantity of total solids is exposed to a non-luminous flame until all organic matter has been destroyed and expelled. By reweighing and deducting the weight of the platinum dish, plus ash, from the weight of the dish, plus total solids, the quantity of total organic matter is determined; and by deducting weight of dish from weight of dish, plus ash, the total quantity of inorganic matter is found. In the analysis of the ash, chlorine is determined by precipitating the solution of the ash in nitric acid with silver nitrate; sulphuric acid by barium chloride; phosphoric acid by ammonium molybdate; calcium by ammonium oxalate; potassium by platinic chloride; iron by potassium ferrocyanide, etc. With many of the inorganic constituents it is not necessary to destroy the organic matter as described above, as the result can be effected directly. Thus, chlorine may be precipitated directly from urine (slightly acidulated with nitric acid) by silver nitrate; the precipitated silver chloride is collected upon a small filter, well washed, dried, and weighed in a porcelain crucible after the filter (to which particles of silver chloride adhere) has been burned separately and its ash added to the contents of the crucible, which is moderately heated before weighing.

Phosphoric acid is found in urine, in part (about two-thirds) combined with alkalies, and in part (about one-third) with lime and magnesia. By adding any alkali the phosphates of calcium and magnesium (generally termed earthy phosphates) are precipitated; the phosphates of sodium or possibly potassium remain dissolved. These so-called earthy phosphates may be approximately determined by adding a few drops of an alkaline hydroxide to about 50 c.c. of urine, heating to the boiling-point, collecting on a filter, washing, igniting, and weighing in a platinum crucible.

7. *Urea.*—There are no very characteristic reactions by which urea can be well recognized. From organic mixtures it is separated by digesting them with from 3 to 4 volumes of alcohol in the cold; the filtered liquid is evaporated to dryness and extracted with alcohol, which again is evaporated. The dry residue may be tested for urea as follows: 1. Dissolved in a few drops of water, the addition of an equal quantity of colorless nitric acid causes the formation of white, shining, crystalline plates or prisms of urea nitrate. 2. If a strong solution of oxalic acid is added instead of nitric acid, rhombic plates of urea oxalate form. 3. The residue (or urea) heated in a test-tube to about 160° C. (320° F.), until no more vapors of ammonia are evolved, leaves a substance termed *biuret*, $C_2H_6N_3O_2$, which upon the addition of a few drops of potassium hydroxide solution and a drop of cupric sulphate solution causes the solution of the cupric hydroxide with a reddish-violet color. The *quantitative estimation of urea* in urine is based upon the fact that urea is decomposed by alkali hypobromites into carbon dioxide, water, and nitrogen. The liberated nitrogen is collected, and from its volume its weight and that of the urea are calculated.

8. *Uric Acid.*—Uric acid may be recognized by its crystalline form and by the murexid test, which is made by placing a fragment of uric acid in a porcelain dish, adding a drop of nitric acid, and carefully evaporating over a flame. To the dry residue a drop of ammonia-water is added, which produces a beautiful purplish-red color. This reaction occurs, however, also with a number of substances which are similar to but more complex in composition than uric acid. The *quantitative estimation of uric acid* in urine is best accomplished by adding 10 c.c. of hydrochloric acid to 250 c.c. of urine, setting aside for twenty-four hours in a cool place, and collecting the crystals of uric acid on a small filter which has been previously weighed. The crystals are washed with a little water and dried at 100° C. (212° F.). As uric acid is not entirely insoluble, 0.0038 gramme has to be added for every 100 c.c. of urine employed for the analysis. If the urine (to be tested for uric acid) be very dilute, it should be evaporated to about one-half its bulk before adding hydrochloric acid; if it contain albumin, this should be removed by adding a drop of acetic acid, boiling, and filtering.

9. *Detection of Albumin.*—Serum-albumin and serum-globulin are the forms most frequently present in urine, but peptones and other albuminoids are also met with. There are chiefly three methods by which the presence of albumin in clear urine may be demon-

strated, based upon the coagulation of albumin by heat, by nitric acid, or by picric acid, but either metaphosphoric acid or trichloracetic acid may also be used. In most cases, if filtration through good filter-paper is not sufficient to render the urine clear, it may become necessary to use other means. Thus, if earthy, amorphous phosphates be present, they may be removed by adding to the urine about a fourth part of potassium hydroxide solution, warming the mixture, and filtering. If the turbidity be caused by urates, the urine will generally become clear by passing the test-tube once or twice through a flame. The clear urine is then tested by either (or all) of the following methods:

(*a*) *Coagulation by Heat.*—A test-tube is filled about one-half with the urine, to which, if not distinctly acid to test-paper, a few drops of acetic acid are added. The test-tube is then held over the flame in such a manner that the heat acts upon the upper half of the urine only, heating this portion gradually to the boiling-point. Two strata of fluid are thus obtained for comparison, and by holding the test-tube against the light or against a black background any difference in the appearance of the upper and lower strata may be noticed easily. Any cloudiness or opacity seen may be due to albumin, but may also be caused by phosphates. A few drops (10 to 15) of nitric acid allowed to flow gently down the side of the tube into the urine will cause the precipitate to disappear when caused by phosphates, but will be permanent when albumin is present. Or, instead of heating merely the upper half of the urine, the total quantity of urine (acidulated by a few drops of acetic acid) may be heated, and the test-tube set aside for several hours (after having added 10 to 15 drops of nitric acid), to allow the albumin to subside, when it can be more distinctly seen and its quantity noticed.

(*b*) *Nitric-acid Test.*—A test-tube is filled to the depth of about half an inch with colorless nitric acid, and an equal quantity of urine allowed to flow down the side of the test-tube, so that the specifically lighter urine forms a distinct and separate layer over the nitric acid. If albumin be present, a white band or zone of varying thickness (according to the quantity of albumin present) appears at the point of contact. If the urine be highly concentrated, a similar white zone is formed between the acid and urine, due to the separation of insoluble acid urates, but forms a sharply-defined zone, whilst the urates diffuse into the urine above, and also dissolve on the application of heat. The separation of acid urates may be avoided by diluting the urine with an equal volume of water and placing this diluted urine upon the nitric acid.

(*c*) *Picric-acid Test.*—By this test neither phosphates nor urates can be mistaken for albumin; it consists in slowly dropping urine into a test-tube filled to about one-fourth with a highly-colored solution of picric acid in water. In the presence of albumin a white cloud or sharply-defined white turbidity is formed, and on warming the liquid the albumin collects into balls which rise to the surface of the liquid.

(*d*) *Metaphosphoric acid* (glacial phosphoric acid) or *trichloracetic acid* may be used by dropping a fragment of either substance into a few c.c. of urine contained in a test-tube. As the acids dissolve a cloudy ring forms in the presence of albumin, which is not dissolved on warming.

The average amount of albumin present in acute albuminuria is 0.1 to 0.5 per cent., rarely over 1 per cent., though it may rise to 4 per cent. An approximate method for the comparative estimation of albumin is to precipitate it (with the precautions mentioned) in a graduated test-tube by heat and setting aside for twelve (or better for twenty-four) hours, when the proportion of coagulated albumin which has collected at the bottom of the fluid is noticed. If the albumin occupy one-fourth, one-sixth, one-tenth of the height of the liquid, there is said to be one-fourth, one-sixth, or one-tenth of albumin in the urine. If, however, scarcely any albumin has collected, there is said to be only a trace. A better method of exactly estimating the amount of albumin is its complete separation and weighing, as follows: Acidify 100 c.c. of clear albuminous urine with acetic acid; heat to the boiling-point in a water-bath for half an hour, and filter through a small filter, previously dried at 110° C. (230° F.) and weighed; wash with boiling water to which a little ammonia-water has been added (to remove uric acid and urates), then with pure water until the filtrate is not rendered turbid any longer by silver nitrate, next with pure alcohol, and finally with ether. Dry and filter contents at 110° C. (230° F.) and weigh. As it may happen that the precipitated albumin encloses earthy phosphates, it is well to burn filter with contents in a platinum crucible, and to deduct the weight of the remaining inorganic residue (less the weight of the filter ash) from that of the albumin.

Peptones may be recognized by first precipitating all albumin by boiling the urine acidified by acetic acid, filtering, and pouring the cold filtrate carefully upon some Fehling's solution contained in a test-tube. At the junction of the two fluids a phosphatic cloud will appear, above which there will be seen a rosy-tinted layer in the presence of peptones. In case the albumin should not have been separated completely, the color will be more violet.

10. *Blood in the Urine.*—This is generally manifested by a blood-red or brownish color with a bluish, smoky, or greenish tint, and deposit of a red or reddish-brown sediment after standing. As a rule, all constituents of blood, including the corpuscles, are present, but in some cases hæmoglobin alone has been found. The tests for blood depend either on the microscope or on chemical changes. By the microscope is examined the deposit which forms on standing; almost unaltered blood-corpuscles may be found, or they may be swollen, decolorized, and deformed; and they are generally accompanied by blood and fibrin casts. Whenever blood is present there are necessarily albuminoids, which are precipitated by acidulating with acetic acid and boiling, when a brownish coagulum of albumin and hæmatin is precipitated. Hæmoglobin is also tested for by means of adding to the urine a few drops of freshly-prepared tincture of guaiacum, a little ozonized ether, and shaking well. If hæmoglobin is present, the ether assumes a blue color.

11. *Detection of Sugar.*—Traces of sugar or as much as 0.01 per cent. are said to occur normally in urine. A large amount is often indicated by high specific gravity, which varies from 1.030 to 1.050; the quantities found vary from mere traces to 10 per cent., the latter, however, being very rare, while 3 to 5 per cent is often found in the urine of diabetes mellitus. The four chief tests are generally known as the copper test (also termed Trommer's and Fehling's test), the bismuth test, the fermentation test, and the picric-acid test. The copper and the bismuth tests are based upon the deoxidizing or reducing power possessed by grape-sugar for many metallic oxides, as cupric, bismuthic, and silver oxide, which, in the presence of alkalies, are converted into the lower state of oxidation or are reduced to metals. Tests for sugar should always be preceded by tests for albumin, which, if present, should be removed by coagulation and filtration. Earthy phosphates interfere with the copper tests, because they are precipitated by the alkali, and this precipitate may be mistaken for precipitated cuprous oxide when no sugar is present, or it may cover the precipitated cuprous oxide so that this is not recognized when sugar is present. To avoid these errors it is well to render the urine slightly alkaline by a few drops of potash solution, filter after a few minutes, and use the urine for the tests.

(*a*) *Trommer's Test.*—Two to four drops of a 5 per cent. solution of cupric sulphate are added to about 5 to 8 c.c. of urine in a test-tube, and then an equal volume of potassium (or sodium) hydroxide solution is added. The alkaline hydroxide precipitates both

earthy phosphates and cupric hydroxide, the latter, however, dissolving (especially if sugar be present) in the excess of alkali, producing a beautiful blue transparent liquid. If no sugar is present the color is less blue, but more of a greenish hue. The liquid is now boiled for a few seconds, when, if sugar be present, a yellow precipitate of cuprous hydroxide is formed, which subsequently loses its water and becomes the red cuprous oxide, which falls to the bottom or adheres to the sides of the test-tube. As various organic substances (other than sugar) have a tendency to reduce cupric oxide at a temperature of 100° C. (212° F.), it is well to set aside a test-tube prepared as above (without heating it) for from six to twenty-four hours. If sugar be present the formation of cuprous hydroxide will gradually take place, whilst most other organic matters do not act upon cupric oxide at ordinary temperature. In drawing conclusions from the above test it should be remembered that a change of color does not indicate sugar; that a precipitate of earthy phosphates must not be mistaken for cuprous oxide; and that substances other than sugar may deoxidize cupric oxide at the temperature of 100° C. (212° F.).

(*b*) *Fehling's test* differs from Trommer's test in merely using a previously mixed reagent instead of producing this reagent, as it were, in the urine by adding to it cupric sulphate and an alkaline hydroxide successively. This reagent, known as Fehling's solution, is made as follows: Crystallized cupric sulphate, 34.65 grams, dissolved in pure water, 200 grams; this solution is poured gradually into a solution of crystallized sodium-potassium tartrate, 173 grams, dissolved in solution of sodium hydroxide of sp. gr. 1.12, 500 grams; the clear, well-mixed fluid is diluted to 1000 c.c. The addition of sodium-potassium tartrate in Fehling's solution prevents the precipitation of cupric hydroxide by the alkaline hydroxide. Fehling's solution is very apt to decompose, and if not recently made should be tested by boiling some of it alone and some of it mixed with about three volumes of water in test-tubes; if no precipitate occurs in either case, the fluid may safely be used. This is done by heating about 10 c.c. of Fehling's solution in a test-tube, and adding drop by drop the suspected urine; if the latter contains larger quantities of sugar, a yellow or red precipitate of cuprous hydroxide and oxide will be produced very readily; if but small quantities are present, an equal volume of urine may be added to the solution, and the boiling repeated several times before the reaction takes place.

(*c*) *Böttger's* or *Boettcher's bismuth test* consists in adding to a mixture of equal volumes of urine and potassium (or sodium) hydroxide solution a few grains of subnitrate of bismuth and boiling for half a minute. If sugar be present, a gray or dark-brown, finally black, precipitate of metallic bismuth is formed. If but very little sugar is present, the undecomposed excess of bismuthic nitrate (or bismuthic hydroxide) mixes with the metallic bismuth, imparting to it a gray color; the test should then be repeated with a smaller amount of the bismuth salt. If the urine contains hydrogen disulphide (sometimes produced by decomposition of certain urinary constituents), black bismuth sulphide will be formed, which may be mistaken for metallic bismuth; albumin itself may be the cause of the formation of alkaline sulphides: the previous complete separation of albumin is therefore indispensable.

(*d*) *The fermentation test* is based upon the decomposition of sugar by the action of yeast with generation of carbon dioxide. The test is made by adding to about 50 or 75 c.c. of urine (contained in a large test-tube or small flask) a few c.c. of ordinary baker's or brewer's yeast. If sugar be present, fermentation will commence within twelve hours, and will manifest itself by the formation of carbon dioxide, which will force a portion of the fluid through the bent tube into the beaker placed there for its reception. The disadvantages of this process are the length of time required for its performance, the unreliability of the ferment, and the fact that small quantities of sugar (less than 0.5 per cent.) evolve so little carbon dioxide that a doubt may be felt as to the presence of sugar at all.

(*e*) *Picric-acid Test for Sugar.*—In the presence of alkalies picric acid may also be used to advantage as a reagent for sugar. Urine is mixed with an equal volume of an aqueous solution of picric acid; a little caustic potash is added and gently heated; a marked reddish or reddish-brown coloration indicates sugar. By far the best method for the determination of sugar in urine is the decomposition of a copper solution of a known strength, and Fehling's solution, prepared as stated above, answers this purpose well. 1000 c.c. of Fehling's solution, containing 34.65 grams of crystallized cupric sulphate, $CuSO_4.5H_2O$, are exactly decomposed by 5 grams of grape-sugar, or 1 c.c. of solution by 0.005 of grape-sugar. The calculation of the amount of sugar present is easily made. 10 c.c. of Fehling's solution are decomposed by 0.05 gram of sugar; this quantity must, therefore, be contained in the number of c.c. of urine used. Suppose 30 c.c. of urine, diluted with 9 parts of water, or 3 c.c. of pure urine, have been required to decompose the 10 c.c. of Fehling's solution; then 3 c.c. of urine contain of grape-sugar 0.05 gram, or 100 c.c. of urine 1.666 grams, according to the proportion:

$$3 : 0.05 :: 100 : x$$
$$x = 1.666.$$

If the urine contains but very little sugar, it may be used directly without diluting it, or instead of diluting it with 9 parts of water it may be diluted with 4 volumes or with an equal volume of water. See *Fehling's solution.*

12. *Detection of Bile.*—The presence of bile in urine is generally indicated by a decided color, from a deep brownish-red to a dark brown; the foam of such urine (produced by shaking) has a distinct yellow color, and a piece of filtering-paper or a piece of linen dipped into the urine assumes a yellow color, which does not disappear on drying. The further detection of bile depends upon the reactions of the biliary coloring matters or biliary acids; it frequently happens, however, that the pigments are present, whilst the acids are not.

(*a*) *Gmelin's test* for biliary coloring matters has been considered already, and may be applied to urine either by allowing a small quantity of nitric acid containing some nitrous acid to flow down the sides of a test-tube (containing the urine) in such a manner that the two fluids do not mix, or by placing upon a porcelain plate a few drops of the urine, near it a few drops of nitric acid to which one drop of sulphuric acid has been added, and allowing the two liquids to approach gradually. In both cases (if bile-pigment is present) a play of color is seen at the point of union between the two fluids, the colors changing from green to blue, violet-red, and yellow or yellowish-green; while the appearance of the green at the beginning is indispensable to prove the presence of bile, the presence of all the other colors is not essential. This test may be modified by mixing the urine with a concentrated solution of sodium nitrate, and pouring down the sides of the test-tube concentrated sulphuric acid in such a manner as to form two distinct layers; the colors are seen at the point of contact as above. If the urine be very dark in color, it should be diluted with water before applying these tests. See *Gmelin.*

(*b*) *Ultzmann's test* for bile-pigment is made by mixing 10 c.c. of urine with 3 or 4 c.c. of potassium hydroxide solution (1 in 3 of water), and supersaturating with hydrochloric acid; the mixture assumes a beautiful emerald-green color after some time.

(*c*) *Pettenkofer's test* for biliary acids is made by dissolving a few grains of cane-sugar in urine contained in a test-tube, and allowing some concentrated sulphuric acid to trickle down the side of the inclined test-tube; a purple band is seen at the upper

margin of the acid, and on slightly shaking the liquid becomes at first turbid, then clear, and almost simultaneously it turns yellow, then pale cherry-red, dark carmine-red, and finally a beautiful purple violet. The temperature must not be allowed to rise much above 38° C. (100° F.).

13. *Urinary Deposits* (*Sediments*).—Urine may be turbid when passed, and this indicates an excess of mucus or the presence of renal epithelium, pus, blood, chyle, semen, bile, or phosphate or urate of sodium in excess, etc. A turbidity subsequent to the passage of the urine is generally due to the precipitation of phosphates or urates, or it may result from fermentation or decomposition. Either of the substances named will form a deposit on standing, When such a deposit is to be examined, a few ounces of the urine should be set aside for several hours in a tall, narrow, cylindrical glass; when the sediment has collected at the bottom, the supernatant urine may be decanted, or the sediment may be taken out by means of a pipette for examination. Sediments are either organized or unorganized. To the first belong mucus, blood, pus, urinary casts, epithelium, spermatozoids, fungi, infusoriæ, etc.; to the second belong uric acid, urates, calcium oxalate, phosphate, or carbonate, magnesium, ammonium phosphate, cystin, hippuric acid, etc. The chemical examination should always be preceded by a microscopical examination, which latter is in many cases the only way of determining the nature of the sediment, especially of the organized substances. Most of the unorganized and either crystalline or amorphous sediments may be easily recognized by chemical means. *Urates of ammonium*, *calcium*, and *sodium* dissolve on heating the urine, and are reprecipitated on cooling. The murexid test is used in addition. *Phosphates of calcium* or *ammonium-magnesium* dissolve in acetic acid, and ammonium molybdate dissolved in nitric acid produces a yellow precipitate on heating. *Calcium oxalate* is insoluble in acetic, but soluble in hydrochloric acid, from which solution it is reprecipitated on neutralizing with ammonia. *Uric acid* is not dissolved by heat nor by acetic or hydrochloric acid, but dissolves on the addition of caustic potash, and burns on platinum foil without leaving a residue; it is recognized by the murexid test. *Cystin* is insoluble in water and alcohol, but soluble in mineral acids and in caustic alkalies; from either solution it is reprecipitated by neutralizing. Cystin contains 26 per cent. of sulphur, which causes the formation of black sulphide of lead when cystin is boiled with caustic potash to which a few drops of solution of lead acetate have been added.

14. *Urinary calculi* are solid deposits of larger or smaller size formed from the urine within the tracts (kidneys, ureter, bladder, and urethra). The chemical composition of the calculi is generally that of either of the above-named unorganized sediments, and their nature can easily be determined. See *Calculi, urinary*. The chemical examination of any urinary sediment should always be preceded by a microscopical examination, which latter is in many cases the only way of determining the nature of the sediment, especially of the organized substances. *Uric acid* occurs in many different forms, mostly in rhombic plates with rounded obtuse angles, often joined into rosettes. Uric acid is found almost invariably colored red or reddish-brown, which generally distinguishes it from other sediments. The crystals or clusters of crystals are often large enough to be seen by the naked eye, and are then known by the terms "sand," "gravel," or "red-pepper grains." *Ammonium acid urate* is found generally associated with amorphous or crystalline phosphates in urine which has become alkaline. The crystalline globules are generally covered with spinous excrescences, which give them the characteristic "thorn-apple" appearance. *Sodium urate* forms generally a part in the pulverulent, heavy, variously tinted deposit of the mixed urates known as "brickdust" or "lateritious" sediment. It occurs either in fine amorphous granules, which cannot be distinguished microscopically from other amorphous sediments, or in a crystalline form. *Urea nitrate* crystallizes readily in large six-sided plates on the addition of nitric acid to urine. *Leucin* or amido-caproic acid and *Tyrosin* are but rarely met with in urinary deposits. Leucin is found either as rounded lumps, showing but little crystalline structure, or as spherical masses, exhibiting fine radial striation. Tyrosin appears generally in fine, long, silky needles, forming bundles or rosettes. *Cystin* occurs occasionally as a grayish crystalline deposit, forming transparent six-sided plates; it also occurs in calculi. *Magnesium ammonium phosphate*, or triple phosphate, is found generally in triangular prisms with bevelled ends, but sometimes also in star-shaped feathery crystals. *Calcium phosphate* is most frequently found in amorphous globules, but also crytallized, either in prisms or in "wedge-shaped" crystals. *Calcium oxalate* occurs either in quadratic ocathedra with brilliant refraction or in the shape of "dumb-bells." *Blood-corpuscles* appear under the microscope as reddish circular disks, sometimes laid together in strings. If seen in profile they appear biconcave. *Mucus* and *pus* are often difficult to distinguish from one another under the microscope, as they both appear as little granular globules varying somewhat in appearance with the reaction of the urine. Pus is rendered slimy, ropy, viscid, and tenacious by the addition of caustic potash. *Hæmin crystals:* the formation of these crystals often serves to recognize blood, and is accomplished by mixing the latter on a glass slide with a little sodium chloride and a drop of glacial acetic acid and warming gently, when the characteristic crystals will appear. By repeating the process several times larger and better-developed crystals are obtained. *Hyaline casts* and *Granular casts* are tube-like cylinders often found together with blood- and pus-corpuscles, or holding in their substance or walls epithelial cells, mucous corpuscles, and fat-globules. Hyaline casts are distinguished by their transparent appearance, while granular casts show a more or less granular surface. *Epithelial casts and cells*, according to their origin (from the vagina, urethra, bladder, etc.), differ somewhat, and it is difficult to recognize with certainty the source whence they are derived. *Waxy casts* resemble hyaline casts, but are less transparent. Casts containing blood-corpuscles or fat-globules are generally easily recognized. Other urinary deposits may also be found, various kinds of fungi, vibrionæ, spermatozoids, hair, or even such foreign matters as fibres of cotton, wool, or silk with their characteristic appearances. See *Calculi, urinary*.

U'rine, feb'rile. Urine discharged in inflammation and inflammatory fever. **U. fe'ver**, F., urethral. **U., filamen'tous,** urine containing thread-like substances. **U., floc'culent,** U. when it is clouded by flocculi suspended in it. **U., furfura'ceous,** urine containing a bran-like sediment. **U., gout'y,** contains much phosphate of lime, and, after severe attacks of gout, precipitates a mixture of the uric and rosacic acids. **U., hyster'ical,** is clear and colorless. **U., icter'ical,** contains bile. **U., incon'tinence of,** see *Enuresis*. **U., jumen'tous,** ammoniacal urine rendered turbid by a substance similar to small grains of dust, which causes it to resemble the urine of herbivorous animals. **U., lactes'cent,** U., milky. **U., milk'y,** white and turbid urine. **U., mucilag'inous,** urine containing much mucus. **U., ner'vous,** thin and very liquid urine, such as is passed shortly after an attack of nervous diseases. **U. of ner'vous fe'vers** is generally very thin, and often deposits a mixture of uric and rosacic acids. **U., oil'y,** that which pours like oil or which has an oily pellicle at its surface. **U., oxal'ic,** *Oxaluria*, urine containing or depositing oxalates. **U., phosphores'cent,** urine which is luminous or phosphorescent. **U., pur'puric,** see *Porphyruria*. **U., reten'tion of,** see *Retention*. **U., rick'ety,** contains much phosphate of calcium. **U., sac'charine,** urine, diabetic. **U., salt of,** ammonii carbonas. **U., sand'y,** urine which deposits a sandy sediment. **U.,**

stop'page of, ischuria; see also *Urination.* **U., thin,** urine that is transparent, slightly colored, and of but little density.

Uriniferous, u-rin-if'er-us (*urina, fero,* to carry). That which carries urine. **U. ducts** or **tubes of Bel'li,** the collection of small tubes converging from the cortical part of the kidney to the apices of the papillæ. The tortuous uniferous ducts are called tubes of Ferrein. **U. sub'stance of the kid'ney,** see *Kidney.*

Uriniparous, u-rin-ip'ar-us (*urina, pario,* to produce). An epithet for tubes in the cortical portion of the kidney.

Urino'des (*urina, odes*). Urinous.

Urinology, u-rin-ol'o-je (*urina, logos,* treatise). Treatise on urine.

Urinom'eter (*urina, metron,* measure). *Urometer, Urogravimeter.* A small hydrometer for taking the specific gravity of urine.

U'rinous. Having the character of urine. Similar to urine.

Urinovagi'nal. Vesicovaginal.

Uritis, u-re'tis (*uro,* to burn, *itis*). Inflammation consequent on a burn.

Urn'ing. An individual whose sexual desires and inclinations are exclusively for persons of the same sex, a form of sexual hyperæsthesia and perversion.

U'ro (*ouron,* urine, or *urina*). In composition, urine.

Urobi'lin. Reddish-yellow pigment, identical with hydrobilirubin, present in small quantity in normal urine, abundant in high-colored urine of fevers, and giving characteristic absorption spectrum.

Urobilinicterus, u-ro-bil-in-ik'ter-us. Jaundice due to retention of urobilin in the blood, occurring chiefly after absorption of large extravasations of blood.

Urobilinuria, u-ro-bil-in-u're-ah (*uro, bilis,* bile, *ouron,* urine). Condition in which a large amount of urobilin is present in the urine, which becomes reddish-brown. See *Urobilinicterus.*

Urocele, u-ro-se'le (Eng. u'ro-seel). Swelling due to effusion of urine into the areolar tissue or the cavity of the scrotum.

Urocheras, u-rok'er-as (*uro, keras,* horn). Gritty sediment in urine.

Urochesia, u-ro-kes'e-ah (*uro, chezo,* to go to stool). A discharge of urine by the bowels.

Urochrome, u'ro-krome (*uro, chroma,* color). The chief coloring matter of the urine. Yellowish amorphous substance yielding by oxidation uroërythrin, and by decomposition with acids a dark material called uromelanin.

Urocrisia, u-ro-kris'e-ah (*uro, krisis,* judgment). A judgment formed either of the urine or of disease after inspecting the urine. Also the crisis of a disease by uresis. *Urocriterion* is the symptom by which such judgment is formed.

Urocriterion, u-ro-krit-a're-on (*uro, kriterion,* criterion). See *Urocrisia.*

Urocyanogen, u-ro-si-an'o-gen (*uro, kuanos,* blue). Blue sediment seen especially in the urine of cholera patients.

Urocyanose, u-ro-si'an-ose. Urocyanogen.

Urocyanosis, u-ro-si-an-o'sis. Blue color of urine due to presence of indican.

Urocystis, u-ro-sis'tis (*uro, cystis,* bladder). Urinary bladder.

Urocystitis, u-ro-sis-te'tis (*urocystis, itis*). Inflammation of the urinary bladder.

Urocystocatarrhus, u-ro-sis-to-kat-ar'rhus. Cystorrhœa.

Urodæum, u-ro-de'um. Continuation of entodermic canal into the tail of the embryo.

Urodialysis, u-ro-de-al'is-is (*uro, dialysis,* dissolution). A partial and temporary suspension of the function of the kidney, occurring in the course of some acute diseases, but without local mischief or preceding inflammatory fever, has been termed, when occurring in children, *Urodialysis neonatorum;* in the aged, *U. senum.*

Urodochium, u-ro-dok-e'um (*uro, dechomai,* to receive). Urinal.

Urodynia, u-ro-din'e-ah (*uro, odune,* pain). Pain during micturition.

Urœdema, u-re-de'mah (*uro, oidema,* a swelling). Tumefaction produced by the escape of urine.

Uroër'ythrin (*uro, eruthros,* red). See *Porphyruria.*

Urogen'ital. *Genito-urinary.* Relating or appertaining to the urinary and genital apparatus, as the urogenital organs. **U. si'nus,** cavity or canal in the embryo of the mammalia opening externally, in which the excretory ducts of the Wolffian bodies, the ureters, and the efferent parts of the generative apparatus terminate internally. It is prolonged into the urachus. Subsequently it becomes separated by a process of division into *pars urinaria* and *pars genitalis.* The former, extending toward the urachus, is converted into the urinary bladder; the latter forms the urethra in the male and the vagina in the female.

Uroglaucin, u-ro-glowk'in (*uro, glaukos,* blue). See *Uroxanthin.*

Uroglycosis, u-ro-glik-o'sis (*uro, glukus,* sweet). Diabetes mellitus.

Urogravim'eter (*uro, gravis,* heavy, *metron,* measure). Urinometer.

Urohæmatin, u-ro-he'mat-in. *Hæmaphæin.* Urine characterized by presence of hematin.

Urohæmatoporphyrin, u-ro-he-mat-o-por'fir-in. Purpuric pigment having a characteristic absorption spectrum, found in urine of rheumatism.

U'rolith, (*uro, lithos,* stone). Urinary calculus.

Urolithiasis, u-ro-lith-e'as-is. Lithia.

Urolithologia, u-ro-lith-o-loj'e-ah (*uro, lithos,* stone, *logos,* description). Description of, or treatise on, urinary calculi.

Urolithotomia, u-ro-lith-o-tom'e-ah. Lithotomy.

Urol'ogy. Uronology.

U'romancy (*uro, manteia,* divination). The art of divining diseases by examination of the urine; *Uroscopy, Ouroscopy.*

Uromelanin, u-ro-mel'an-in. See *Urochrome.*

Urom'eles (*oura,* tail, *melos,* limb). A genus of monsters in which the two lower limbs are united, very incomplete, and terminated by a single foot, which is almost always imperfect, the sole being turned forward. Such monster is said to be *Urom'elus.*

Urom'eter (*uro, metron,* measure). Urinometer.

Urom'phalus (*urachus, omphalos,* navel). Monstrosity which consists in the protrusion of the urachus at the umbilicus.

U'ron (*ouron*). Urine.

Uroncus, u-ron'kus (*uron, onkos,* swelling). A urinary swelling.

Uronol'ogy (*uron, logos,* discourse). *Ourology, Urology.* The part of medicine which treats of the urine.

Urophain, u'ro-fain. Urobilin.

Urophthisis, u-ro-te'sis (*uro, phthisis*). Diabetes mellitus.

Uropittin, u-ro-pit'tin. Product of urochrome having a peculiar absorption spectrum.

Uroplan'ia (*uro, plane,* wandering). The presence of urine in other parts than the urinary organs.

Uropoësis, u-ro-po-e'sis (*uro, poieo,* to make). The secretion of urine by the kidney.

Uropoëtic, u-ro-po-et'ik. Concerning or favoring the production of urine.

Uropoiesis, u-ro-poi-a'sis. The secretion of urine by the kidney.

Uropsammus, u-ro-sam'mus (*uro, psammos,* sand). Urinary gravel.

Uropyg'ii gland'ulæ (*oura,* tail, *pyge,* rump). A caudal sebaceous gland in birds, supplying the fatty secretion with which they anoint their feathers.

Uropygion, u-ro-pij'e-on. Coccyx.

Uropygium, u-ro-pij'e-un. The region of the coccyx.

Urorrhagia, u-ror-rhaj'e-ah (*uro, rhage,* breaking forth). Diabetes.

Urorhodin, u-ro'rho-din (*uro, rhodon,* rose). Purpuric coloring matter in urine, a modification of hæmaphæin.

Urorrhœa, u-ror-rhe'ah (*uro, rheo,* to flow). Enuresis. Diabetes.

Urorrhorrhœ'a (*uro, orrhorrhœa*, flow of serum). Albuminuria.

Urorubin, u-ro-ru'bin. Garnet-red, crystalline pigment precipitated by adding ether to urine boiled with hydrochloric acid.

Uros'acin (*uro, rosa*, rose). Urorhodin.

Uroscheocele, u-ros-ke-o-se'le (Eng. u-ros'ke-o-seel) (*uro, oschе*, scrotum, *kele*, rupture). Urocele.

Uroscopy (u-ros'ko-pe) or **Uroscop'ia** (*uro, skopeo*, to void). Examination of urine; see *Uromancy*.

Urosep'tic. Relating to morbid effects of extravasation of urine.

Uro'ses (*uro, osis*). Diseases of the urinary organs.

Uros'tealith (*uro, stear*, fat, *lithos*, stone). A peculiar fatty ingredient of urinary calculi.

Urosteatoma, u-ro-sta-at-o'mah (*uro, stear*, fat). Urostealith.

Urosteno'sis. Urethrostenosis.

Urotheobromine, u-ro-the-o-bro'meen. Paroxanthine.

Urotoxic, u-ro-toks'ik (*uro, toxicon*, poison). Toxic from retention of effete products in the blood which should be eliminated by the kidneys.

U'rous ac'id. Uric acid.

Uroxanthin, u-ro-zan'thin (*uro, xanthos*, yellow). *Uroxanthine.* A yellow coloring matter in urine, decomposable into a red coloring matter, urrhodin, and a blue, uroglaucin—the former having the same composition as indigo red, the latter as indigo blue.

Urozemia, u-ro-za'me-ah (*uro, zemia*, loss). Diabetes. **U. albumino'sa**, kidney, Bright's disease of the. **U. melli'ta**, diabetes mellitus.

Urrhodin, ur'rho-din (*uro, rhodon*, rose). See *Porphyruria.*

Urrosacin, ur-ros'as-in (*uro, rosa*, rose). See *Porphyruria.*

Ur'sin ar'butin. Crystalline principle found in *Uva ursi;* diuretic and astringent.

Ur'sone. Tasteless principle from Uva ursi.

Urtica, ur-te'kah (*uro*, to burn). *Common stinging nettle;* ord. Urticaceæ. Used for medical and culinary purposes. The young shoots in the spring are diuretic and antiscorbutic. The pain produced by its sting is not to be compared to the torture occasioned by U. stimulans and U. crenulata of India, and still less to U. urentissima of Timor, called by the natives Daoun setan—devil's leaf—from the persistence and severity of the pain. **U. balear'ica**, U. pilulifera. **U. crenula'ta**, see *Urtica.* **U. dioi'ca**, urtica. **U. his'pida**, urtica. **U. iners' mag'na fœtidis'sima**, galeopsis. **U. ma'jor**, U. dioica. **U. mi'nor**, U. urens. **U. mor'tua**, Lamium album. **U. pilulif'era**, *Pill-bearing nettle.* The seed was formerly given in diseases of the chest. **U. pilulo'sa**, U. pilulifera. **U. Roma'na**, U. pilulifera. **U. stim'ulans**, see *Urtica.* **U. u'rens**, *Dwarf nettle;* a lesser variety of the nettle, said to check hemorrhage when prescribed internally. **U. urentis'sima**, see *Urtica.*

Urticaria, ur-te-kah're-ah (*urtica*, because the eruption resembles that produced by the stings of a nettle). *Porcelaine, Nettlerash, Hives, Bold hives.* Inflammatory affection characterized by development of wheals, of whitish, pinkish, or reddish color, accompanied by stinging, pricking, or tingling sensations. It may be induced by eating shell-fish, eggs, nuts, etc., *Toxic urticaria, Urticaria ab ingestis.* **U. bullo'sa**, in which both wheals and blebs are present. **U. confer'ta**, in which lesions are grouped. **U. evan'ida**, in which wheals rapidly disappear. **U. hæmorrhag'ica**, *Purpura urticans* or *urticata*, in which there is half purpura and half wheals, the latter being secondary. **U. marit'ima**, eruption of salutary character produced by sea-bathing. **U. medicamento'sa**, from ingestion or local application of certain drugs. **U. papulo'sa**, *Lichen urticatus*, in which the lesion is in form of a papule with characteristics of a wheal. **U. pigmento'sa**, having pinkish, reddish, or yellowish wheals, inclining to persist and to be succeeded by yellowish, orange, greenish, or brownish stains or pigmented spots. **U. porcel'lana**, essera; urticaria. **U., tox'ic**, see *Urticaria.* **U. tubero'sa**, in which more or less persistent nodes or tumors are formed.

Urticata, ur-tik-at'ah. Urticaria hæmorrhagica.

Urtication, ur-te-ka'shun. Flagellation with nettles, used to excite the skin; burning; itching.

Urucu. Terra Orleana.

Uryl'ic ac'id. Uric acid.

Usne'a cra'nii huma'ni. Lichen saxatilis. **U. flor'ida hir'ta**, Lichen plicatus. **U. hir'ta**, Lichen plicatus. **U. plica'ta**, Lichen plicatus.

Ustilag'inous. Relating or belonging to ergot, as gangræna ustilaginea. See *Ergotism.*

Ustila'go (*uro, ustum*, to burn). Ergot. **U. may'dis**, corn smut or fungus which grows upon Zea mays.

Us'tio (*uro*, to burn). Burn; ustion.

Us'tion (*uro*, to burn). Act of burning or applying the actual cautery; effect of cauterization.

Ustula'tion (dim. of **Ustio**, burn). Pharmaceutical operation of drying a substance by heat.

Us'tus (*uro, ustum*, to burn). Burnt or calcined.

Usua'lia (*usus*, use). See *Officinal.*

U'sus (use). Habit.

U'ta. Local affection, perhaps epithelial cancer, of Peru.

U'ter (a leather bottle). Uterus.

Uteral'gia (*uterus, algos*, pain). A hybrid word; metralgia or pain in the uterus.

U'teri adscen'sus. Hysteria. **U. anterver'sio**, anterior obliquity of the uterus. **U. carcino'ma**, cancer of the uterus. **U. convulsi'vus mor'bus**, epilepsy of the womb, so called. **U. cory'za**, leucorrhœa. **U. exulcera'tio**, ulceration of the uterus. **U. flex'io**, obliquity of the uterus. **U. inclina'tio**, obliquity of the uterus. **U. obliq'uitas**, obliquity of the uterus. **U. prona'tio**, anterior obliquity of uterus. **U. pruri'tus**, nymphomania. **U. reflex'io comple'ta** or **retrover'sio**, posterior obliquity of uterus. **U. rheu'ma**, leucorrhœa. **U. ul'cus**, ulceration of uterus. **U. ver'sio incomple'ta**, obliquity of uterus.

U'terine (*uterus*), Belonging or relating to the womb. **U. appen'dages**, ovaries and Fallopian tubes. **U. ar'tery** arises from the hypogastric, either separately or with the umbilical, or from the internal pudic; passes upon the lateral parts of the vagina and ascends on the sides of the uterus, and divides into a number of tortuous branches which enter its tissue. **U. bougie'**, uterine sound. **U. broth'er**, one born of the same mother but different father. Also male twin fœtus in utero. **U. col'ic**, metralgia. **U. fa'cies**, expression of face peculiar to uterine affections. **U. gesta'tion**, period from conception to normal labor. **U. glands**, utricular glands. **U. hem'orrhoids**, see *Hemorrhoids.* **U. milk**, fluid rich in albuminous and fatty particles, found between villi of placenta in ruminants. **U. mur'mur**, bruit placentaire. **U. mus'cle**, fleshy fibres at the fundus of the uterus; term sometimes applied to the whole muscular arrangement of the uterus. **U. preg'nancy**, normal pregnancy. **U. rush**, bruit placentaire. **U. si'nuses**, large tortuous channels found in parietes of uterus. **U. souffle**, sound heard on auscultation over the abdomen in fifth or sixth month of pregnancy. **U. sound**, see *Sound, uterine.* **U. stran'gury**, dysmenorrhœa.

Uteri'nus fra'ter. Uterine brother.

Uteri'tis, u-ter-e'tis. Inflammation of the uterus. Metritis is a more correct term.

U'tero. In composition, relating to the uterus.

Uterocer'vical canal. Lower uterine segment.

Uterogesta'tion (*uterus, gesto*, to carry). Pregnancy.

Uteroma'nia. Nymphomania.

U'tero-ova'rian. Relating to the uterus and ovary.

U.-o. ar'tery, see *Spermatic artery.*

Uteroplacen'tal vac'uum. Vacuum produced by traction upon the funis of a detached placenta, which causes it to cling to the uterine walls.

Uterosa'cral folds. See *Uterus.*

U'terotome. Hysterotome.

Uterot'omy. Hysterotomy.

Uterovagi'nal plex'us. Plexus situate at sides and upper part of vagina and cervix.

Uteroves'ical fos'sa. Vesico-uterine pouch.

U'terus (*hystera*). The womb. The uterus is a hollow symmetrical organ, having shape of a truncated

conoid, situate in the pelvis, between the bladder and rectum, above the vagina, below the convolutions of the small intestine. It is two inches broad at its highest part, and becomes narrower toward the vagina, terminating in a contracted portion, the cervix or neck, the rest of the organ being called the body. From its fundus, or upper portion, the Fallopian tubes pass. The mouth is called os uteri, os tincæ, os uteri externum, orificium vaginale. See *Os uteri*. At the point where the body is continuous, below, with the neck the cavity is slightly constricted, forming the internal orifice, os uteri internum, os internum, isthmus or ostium uterinum canalis cervicis uteri. Between these is the cervical canal. The uterus is composed—1. Of a serous membrane, the peritoneum, reflected upon the uterus from the posterior surface of the bladder and anterior surface of the rectum. These folds of peritoneum are called the anterior and posterior ligaments. The former are the vesico-uterine, the latter the recto-uterine folds or plicæ semilunares; the pouch thus formed is Douglas's cul-de-sac or space. The serous membrane forms also the ligamenta lata, alæ vespertilionis, or broad ligaments. These contain, above, the Fallopian tube; beneath and anteriorly, the round ligaments; and, behind, the ovary. 2. Muscular coat. 3. Mucous coat. The arteries proceed from the spermatic and hypogastric. Its veins follow the same course and bear the same name as the arteries. They are tortuous, and form large sinuses in the parietes of the organ, called *Uterine sinuses*. The nerves proceed from the sciatic and hypogastric plexuses. Its lymphatic vessels are multiplied, and during pregnancy acquire enormous dimensions.

The uterus is said to be, *one-horned, U. unicornis*, when only half of the organ is developed; a second rudimentary horn may, however, be present; *two-horned, U. bicornis*, when, in consequence of incomplete coalescence of Müller's ducts, the horns of the organ diverge.—Also the abdomen.

U'terus, antever'sion of. Anterior oblique position of uterus. **U. bicor'nis,** see *Uterus*. **U. bicor'nis unicel'lis,** in this form a median vertical fold of peritoneum divides the recto-vaginal pouch, and, continuing to the bladder, divides the utero-vesical pouch into two shallow depressions. **U. bif'idus,** "blind uterus," double uterus; one separated into two cavities. **U. bif'oris,** uterus in which external os is divided into two parts by an antero-posterior septum. **U. bilocula'ris,** *Uterus bipartitus;* double uterus, due to arrested development. **U., catarrh' of,** leucorrhœa. **U., cer'vix of,** portion situate below the isthmus. **U., contrac'tion of,** rhythmical muscular contraction whereby the fœtus is expelled. **U. cordifor'mis,** heart-shaped appearance, due to arrested development. **U. diadel'phys** (*di, adelphos,* a brother), a uterus in which there has been separate development and non-coalescence of the ducts of Müller; not strictly a double uterus. **U. du'plex** (double uterus), see *Uterus bilocularis*. **U., epistax'is of,** hemorrhage occurring a few days after ovariotomy. **U., her'nia of,** hysterocele. **U., hour'glass contrac'tion of,** irregular contraction, by which the placenta is retained in a funda or cavity after birth of the child. **U., incarcera'tion of,** strangulation of uterus due to pressure or constriction. **U. inclina'tus,** oblique position of uterus. **U., iner'tia of,** deficiency in uterine force during parturition for expulsion of fœtus. **U., in'fantile,** undeveloped uterus. **U., inver'sion of,** uterus displaced and turned inside out. **U., involu'tion of,** see *Involution*. **U., ir'ritable,** *Neuralgia of the uterus;* deep-seated pain in lower part of the abdomen, the back, and loins, generally diminished by lying down and increased by exercise, and more severe for a few days preceding and during menstruation; see *Hysteralgia*. **U. masculi'nus,** see *Ejaculatory ducts*. **U., neural'gia of,** uterus, irritable. **U. obli'quus,** oblique position of uterus. **U., one-horned,** see *Uterus*. **U., prolapse of,** prolapsus uteri. **U., retrover'sion of,** oblique position of uterus in a posterior direction. **U., rup'ture of,** laceration of the womb; this dreadful accident occurs during labor, and is known to have taken place when the child's head suddenly recedes during a pain, with vomiting, sinking of the pulse, cold sweats, etc. **U. sep'tus,** uterus bilocularis. **U., subinvolu'tion of,** see *Subinvolution*. **U. subsep'tus,** uterine cavity divided by an incomplete septum. **U., two-horned,** see *Uterus* and *U. bicornis*. **U. unicor'nis,** see *Uterus*.

Utricle, u'tre-k'l (dim. of **Uter,** small bag). Small cell, vesicle, or depression. See *Ejaculatory ducts, Semicircular canals, Uterus*. **U., primor'dial,** delicate membrane, of protein composition, lining cell-wall of vegetable structures, and from exterior of which the layer of cellulose is secreted. **U. pro'prius,** middle and lower part of utricle of ear, comprising superior and inferior sinuses. **U. prostat'icus,** prostatic vesicle.

Utricular, u-trik'u-lar. Relating to or resembling a small bag or bottle. **U. glands,** glands or follicles concerned in formation of the decidua.

Utriculus, u-trik'u-lus. Utricle; see *Ejaculatory ducts, Semicircular canals, Uterus*. **U. commu'nis,** see *Semicircular canals*. **U. lac'teus,** receptaculum chyli. **U. primordia'lis,** utricle, primordial. **U. prostat'icus,** see *Ejaculatory ducts*.

U'va (a grape or a bunch of grapes). Uvula; see *Vitis vinifera*. **U. inver'sa,** Paris. **U. lupi'na,** Paris. **U. pas'sa,** see *Vitis vinifera*. **U. ur'si,** see *Arbutus uva ursi*. **U. vulpi'na,** Paris.

U'væ. Raisins. See *Vitis vinifera*. **U. Corinthi'acæ,** see *Vitis Corinthiaca*. **U. pas'sæ,** dried grapes, raisins; see *Vitis vinifera*. **U. pas'sæ majo'res,** see *Vitis vinifera*. **U. pas'sæ mino'res,** see *Vitis Corinthiaca*. **U. pas'sæ so'le sicca'tæ,** see *Vitis vinifera*. **U. ur'sæ fo'lia,** see *Arbutus uva ursi*.

Uva'ria tril'oba (*uva,* a grape). See *Carica papaya*.

Uvatio, u-vah'she-o (*uva,* a grape). Ceratocele; staphyloma.

U'vea (*uva,* a grape). Posterior layer of the iris, so called from the black and very thick varnish that covers it. Also applied by some anatomists to the iris, ciliary processes, and choroid membrane. See *Iris*. **U., com'missure of,** ciliary ligament.

U'veal ar'teries. Short posterior ciliary arteries. **U. tract,** choroid membrane or vascular tunic of the eye.

Uveï'tis (*uvea, itis*). Properly, Rhagoideïtis. Inflammation of the uvea. See *Iritis*.

U'vic ac'id. Racemic acid.

Uvigena, u-vij'en-ah. Uvula.

Uvigera, u-vij'er-ah. Uvula.

U'vula (*uva,* a grape). A fleshy appendix or prolongation situated on the cone-shaped middle or free edge of the velum palati. **U. cerebel'li,** eminence on under surface of cerebellum, on median line, behind the nodulus; see *Vermiform process, inferior*. **U. decid'ua,** staphylœdema. **U. elonga'ta,** staphylœdema. **U. relaxa'ta,** staphylœdema. **U. ver'mis,** uvula of the cerebellum. **U. vesi'cæ,** slight elevation on the mucous membrane projecting from the lower and anterior part of the bladder into the orifice of the urethra. **U., ves'ical,** see *Urinary bladder*.

U'vular. That which belongs to the uvula. **U. glands** are small follicles belonging to the mucous membrane covering the uvula.

Uvula'ria (so called from the flowers hanging like the uvula). Ruscus hypoglossum. **U. grandiflo'ra** and **U. sessilifo'lia** have properties similar to those of **U. perfolia'ta,** *Smaller bellwort;* indigenous; ord. Melanthaceæ. The root, when fresh, is subacrid and mucilaginous. A decoction of the plant is used in sore mouth. It is said to cure the bites of rattlesnakes.

U'vulatome. Instrument for excision of the uvula.

Uvulatomy, u-vu-lat'o-me (*uvula, tome,* incision). Excision of the uvula.

Uvulato'sis. Prolapse of the uvula.

Uvulitis, u-vu-le'tis (*uvula, itis.*). *Falling down of the palate.* Inflammation of the uvula; when to a slight degree, called *Hypostaphylitis*.

Uvulopto'sis (*uvula, ptosis,* falling). Relaxation of the uvula.

Uvulot'omy. Excision of the uvula.

Uzaidel'la (P.). Chenopodium ambrosioïdes.

V.

Vaccina, vak-se'nah (*vacca,* a cow). *Cowpox, Cowpock, Kinepock, Inoculated cowpox.* The cowpox is a disease of the cow, arising spontaneously, or perhaps from the small-pox contagion of man, or from the matter of grease in horses conveyed by the milkers, which, if transmitted to man by means of inoculation, may preserve him from small-pox contagion. The promulgation of this valuable property of the vaccine virus is due to Dr. Jenner, who, after many experiments extending over twenty years, made a definite announcement in 1798 regarding the nature of the virus. The *Vaccine virus, Virus vaccinum,* the vaccinia of the eruption, is usually taken from the cow, being regarded as safer than that taken from the human eruption. The characteristic of cowpox eruption is a semitransparent, pearl-colored vesicle with a circular or somewhat oval base; its upper surface, until the end of the eighth day, being more elevated at the margin than in the centre, and the margin itself being turgid, shining, and rounded, so as often to extend a little over the line of the base. The vesicle is filled with clear lymph, contained in numerous little cells that communicate with each other. After the eighth or ninth day from the insertion of the virus it is surrounded by a bright-red, circumscribed areola, which varies in its diameter, in different cases, from a quarter of an inch to two inches, and is usually attended with a considerable tumor and hardness of the adjoining areolar membrane. This areola declines on the eleventh or twelfth day; the surface of the vesicle then becomes brown in the centre, and the fluid in the cells gradually concretes into a hard, rounded scab or crust of a reddish-brown color, which at length becomes darker, contracted, and dry, but is not detached till three weeks after vaccination. It leaves a permanent circular cicatrix about five lines in diameter and a little depressed, the surface being marked with very minute pits or indentations, denoting the number of cells of which the vesicle had been composed. This is the progress of the *genuine cowpox.* At times fever, vaccinal fever, occurs about the ninth or eleventh day after vaccination, but at others not the slightest indisposition is felt. Aberrations from this progress occur which must be attended to, as the same preservative influence is not exerted by *irregular* or *spurious cowpox.* If the eruption runs speedily to a height, has an areola too early, is irregular at its edges, and contains pus instead of a limpid fluid, it cannot at all be depended upon. In addition to the vesicle which develops itself at the seat of vaccination, an eruption of a similar kind, *Vacciniolæ,* sometimes occurs in other parts of the body, running its course at times with the other. To small-pox, which may occur in a modified form after vaccination, the term *Varioloid* has been given. Vaccination is now practised everywhere except among those in whom ignorance and prejudice exclude the lights of reason and philanthropy. There is ground, however, for the belief that for full protection *revaccination* may be occasionally necessary. **V. antivariolo'sa,** vaccina. **V. primig'ena,** vaccina. **V. tutor'ia,** vaccina. **V. tu'trix,** vaccina. **V. vaccinato'ria,** vaccina.

Vaccinal, vak'sin-al. Vaccine. **V. fe'ver,** slight fever occurring occasionally about the ninth to the eleventh day after vaccination.

Vaccination, vak-sin-a'shun (*vacca,* cow). *Cowpox inoculation, Jennerian inoculation.* An operation which consists in inserting the vaccine virus under the cuticle, so that it may enter into the absorbents. That part of the arm about the insertion of the deltoid is usually selected as the seat of the inoculation. The skin should be carefully cleansed and put upon the stretch. Then with a lancet or ivory point the skin should be cross-hatched and the lymph rubbed in and allowed to dry, after which the spot should be covered by lint or a bandage. The best period for inoculation is at the third or fourth month. A person exposed to the contagion of small-pox should be revaccinated.

Vaccinator, vak'sin-a-tor. *Vaccinist.* One who inoculates for the cowpox. Also an instrument employed for this purpose.

Vaccine, vak'seen (same etymon as **Vaccination**). Relating or appertaining to vaccination, as the vaccine vesicle, a vaccine physician. **V. vi'rus,** lymph obtained from vaccinic eruption occurring in dried form, as *crusts* or *points,* or in fluid form, which is sold in the shops in *tubes.* Virus obtained from human eruptions is known as *Humanized vaccine* or *virus,* while that from the vesicles of the cow is called *Bovine vaccine* or *virus.*

Vaccinella, vak-sin-el'lah (dim. of **Vaccina**). Spurious cowpox.

Vaccinia, vak-sin'e-ah. Vaccina. **V. palus'tris,** Vaccinium oxycoccos.

Vaccinifer, vak-sin'if-er (*vaccina, fero,* to carry). An instrument intended as a substitute for the lancet in vaccination.

Vacciniform, vak'sin-i-form. Having resemblance to cowpox.

Vaccinin, vak'sin-in. Bitter principle obtained from Vaccinium vitis idæa.

Vaccinine, vak'sin-een. A term proposed for the specific zymotic principle by which cowpox is propagated.

Vacciniolæ, vak-sin-e'o-le (dim. of **Vaccina**). Eruption resembling varicella occurring occasionally as a result of vaccination.

Vaccinist, vak'sin-ist. Vaccinator.

Vaccin'ium crassifo'lium. Plant similar to uva ursi in therapeutic properties, especially used in catarrhal inflammation of the genito-urinary tract. **V. macrocar'pon,** see *Vaccinium oxycoccos.* **V. myrtyl'lus,** *Myrtleberry, Bilberry, Bleaberry, Whortleberry, Black whorts;* ord. Vaccinieæ. The berries—*Baccæ myrtillorum*—are esteemed to be antiscorbutic and astringent; used as an article of diet. **V. ni'grum,** V. myrtillus. **V. oxycoc'cos,** *Moorberry, Cranberry, Mossberry, Swamp redberry, Sourberry;* the berries are pleasantly acid and cooling. The common American cranberry is from *Vaccinium macrocarpon, Oxycoccus macrocarpus.* **V. Pennsylva'nicum,** *Low blueberry;* the leaves and bark of the root are astringent. **V. puncta'tum,** V. vitis idæa. **V. resino'sum,** Gaylussacia resinosa. **V. stamin'eum,** *Buckberry, Squaw Huckleberry, Deerberry;* the leaves are astringent. **V. vi'tis idæ'a,** *Red bilberry, Alpine cranberry, Whortleberry, Cowberry;* leaves are astringent; the ripe berries are pleasantly acid and refrigerant. Whortleberries are furnished by different species of Vaccinium.

Vaccin'oïs. Vaccinella.

Vaccinosyphilis, vak-sin-o-sif'il-is. *Vaccinal syphilis.* Syphilitic inoculation by means of vaccine virus.

Vaccinus, vak-se'nus. Vaccine.

Vacciola, vak-se'o-lah. Vaccina. **V. lepro'sa,** vaccinella. **V. scutella'ta,** vaccina. **V. spu'ria,** vaccinella. **V. ve'ra,** vaccina.

Vacillatio, vas-il-lah'she-o (*vacillo,* to waver). Staggering; waddling. **V. den'tium,** looseness of the teeth.

Vacuolation, vak-u-o-la'shun. Condition in ganglion-cells which have undergone granular degeneration, in which they contain several large spherical air-spaces or vacuoles.

Vacuole, vak'u-ole. Small air-cell or globular space in the interior of organic cells, containing either oil or a clear liquid.

Vagabondis'mus. *Vagabond's discoloration.* Dark-brown discoloration of the skin from exposure, want

of cleanliness, or pediculosis; sometimes mistaken for Addison's disease.

Vagi'na (a sheath). *Theca.* A term extended to many parts which serve as envelopes to others. *Vulvo-uterine canal.* A cylindrical canal, five or six inches long, situate within the pelvis between the bladder and rectum. It communicates by one extremity, *Ostium* or *Orificium* or *Os externum vaginæ*, with the vulva; by the other, *Fundus*, with the womb, *Pars* or *Portio vaginalis uteri*, the neck of which it embraces. It is lined internally by a mucous membrane, which presents along the anterior and posterior walls a longitudinal ridge, called the columns of the vagina, columnæ rugarum, and is partly closed in young females by the hymen and carunculæ myrtiformes. Around the mucous membrane is a layer of spongy erectile tissue and a cellulovascular membrane. The following statements have been made as to measurements of the vagina (Vierordt): Length of posterior wall from the hymen to upper point of fornix, 70–80 mm.; length at anterior wall, 55–60; breadth, about 30; thickness of wall, 2; epithelium of mucous membrane, 0.15–0.2; papillæ, 0.13–0.18 in length. **V. bul'bi**, capsule of Ténon. **V. cellulo'sa**, epineurium; perimysium. **V. cor'dis**, pericardium. **V., double**, malformation in which there are two vaginæ. **V. fem'oris**, fascia lata aponeurosis. **V. fibro'sa**, sheath of flexor tendons. **V. fibro'sa ner'vi op'tica**, fibrous sheath of optic nerve. **V. funic'uli umbilica'lis**, see *Funiculus umbilicalis.* **V. Glisso'nii**, capsule of Glisson. **V., her'nia of**, see *Cystocele.* **V. malleola'ris exter'na**, retinaculum tendinum perinæorum. **V. masculi'na**, see *Ejaculatory ducts.* **V. mulie'bris**, vagina. **V. muscula'ris**, perimysium. **V. nervo'rum**, neurilemma. **V. oc'uli**, V. bulbi. **V. pe'nis**, vagina. **V. pi'li**, see *Hair.* **V., pol'ypus of**, see *Polypus.* **V. por'tæ**, capsule of Glisson. **V., ru'gæ of**, elevated portions of the mucous membrane of the vagina. **V. tendino'sa cru'ris**, fascia lata. **V. ten'dinum**, synovial sheath. **V. uteri'na**, vagina. **V. vaso'rum crura'lium**, crural sheath. **V. of the ve'na por'ta**, *Sheath of the vena porta;* the areolar membrane that accompanies the divisions of the vena porta into the substance of the liver.

Vagi'næ muco'sæ. See *Bursæ mucosæ.* **V. synovia'les** (synovial sheaths), bursæ mucosæ.

Vagi'nal (*vagina*, a sheath). Relating or pertaining to the vagina or to a sheath. **V. ar'tery** arises from the hypogastric, or from the uterine, vesical, internal pudic, umbilical, etc., and sends its branches first to the lateral parts of the vagina, and afterward to the anterior and posterior surfaces. **V. bil'iary plex'us**, a plexus of ramifications of the hepatic duct through the capsule of Glisson. **V. branch'es of the ve'na por'ta**, those which have to pass through the sheath of the capsule of Glisson previous to entering the interlobular spaces. In this course they form the vaginal plexus. There are also vaginal branches, and a vaginal plexus formed by the hepatic artery. **V. coat of the eye**, capsule of Ténon. **V. coat of the tes'ticle**, the serous membrane enveloping the testicle. The tunica vaginalis forms a close sac investing the testicle and epididymis, without containing them in its cavity, and reflected so as to form a bag around the circumference of the testis; hence it is divided into tunica vaginalis propria and tunica vaginalis reflexa. **V. douche**, apparatus for bathing the vagina with fluids. **V. gan'glia**, see *Spermatic ganglion.* **V. hysterec'tomy**, excision of the uterus through the vagina. **V. ovariot'omy**, removal of an ovarian tumor through an incision in the vagina. **V. plex'us**, see *Vaginal branches of the vena porta.* **V. pro'cess of the tem'poral bone**, a bony crista which embraces the base of the styloid process. **V. pulse**, pulsation of the vaginal artery, which is increased in pregnancy, during abortion, labor, etc. **V. respira'tion**, rise and fall of the vagina under the influence of similar movements on the part of the diaphragm. **V. suppos'itories**, see *Suppositories* and *Pessary.*

Vaginali'tis. Inflammation of the tunica vaginalis.

Vaginate, vaj'in-ate. In a sheath.

Vaginis'mus. Spasm of the sphincter muscle of the vagina, with hyperæsthesia of the surrounding parts.

Vaginitis, vaj-in-e'tis. Inflammation of the vagina. When occurring during childbirth it is called puerperal vaginitis. When accompanied with leucorrhœa and the growth of papillary projections on the surface of the membrane, it is called, from its granular appearance, vaginitis granulosa, granular vaginitis. See *Leucorrhœa (vaginal).* It may also be gonorrhœal, *Gonorrhœal vaginitis.*

Vaginodynia, vaj-in-o-din'e-ah (*vagina, odune*, pain). Pain in the vagina.

Vaginotomy, vaj-in-ot'o-me. Incision into the vagina. Colpotomy is a better term.

Vaginovesical, vaj-in-o-ves'ik-al. Relating to the bladder and vagina.

Vagitus, vaj'it-us (*vagio*, to cry). Cry of the newborn child; squalling. **V. uteri'nus**, sound made by the child in utero.

Va'go-accesso'rius. Pneumogastric and spinal accessory nerves considered as one trunk.

Vagot'omy. Section of the vagus nerve.

Va'grant cells. See *Amœboid.*

Va'gus (ner'vus) (wandering nerve). Pneumogastric.

Valan'ida. Fagus sylvatica.

Valantia aparine, val-an'she-ah ap-ar-een'e (after S. Vaillant, a French botanist). Galium aparine.

Valentin'ian ves'icles (after Valentin, the German physiologist). See *Molecule.*

Val'eren. A terpine entering into the composition of valerianic acid.

Vale'rian, Amer'ican. Cypripedium luteum; Valeriana pauciflora. **V., gar'den**, Valeriana phu. **V., Greek**, Polemonium reptans. **V., offic'inal**, Valeriana. **V., wild**, Senecio aureus; valeriana; V. pauciflora.

Valeria'na. *Wild* or *officinal valerian;* ord. Valerianaceæ. The officinal valerian is the rhizome and rootlets of V. officinalis. It is used in a variety of nervous complaints. It has a strong, fetid odor; bitterish, subacrid, and warm taste. The distilled oil is official (Ph. U. S.). The kooyah root or kooyahs of the Indians in Oregon, used by them for making a bread called *supale*, is said to be that of *Valeriana officinalis* or *Valeriana edulis*, probably the same as that sometimes written *kous.* It is frequently called *Tobacco root.* **V. Capen'sis**, South African species, has similar virtues. **V. Celt'ica**, the roots of this Alpine plant are stomachic, carminative, and diuretic. **V. denta'ta**, *Corn salad;* a wholesome, succulent plant, cultivated in Europe as a salad. It is antiscorbutic and gently aperient. **V. edu'lis**, see *Valeriana.* **V. locus'ta**, V. dentata. **V. ma'jor**, V. phu. **V. mi'nor**, valeriana. **V. officina'lis**, valeriana. **V. pauciflo'ra**, *American* or *Wild valerian*, has the properties of other valerians. **V. phu**, *Garden valerian.* The root has been recommended in rheumatism, especially in sciatica and in epilepsy. **V. saxat'ilis**, V. Celtica. **V. spi'ca**, Nardus Indica. **V. sylvat'ica**, see *V. pauciflora.*

Vale'rianate. Combination of valerianic acid with a base. Valerianates of ammonium, iron, quinine and zinc are used medicinally. See *Zinci valerianas*, etc.

Valerian'ic ac'id. See *Acidum valerianicum.*

Vale'ric ac'id. Acidum valerianicum.

Valerine, val'er-een. Alkaloid obtained from valerian.

Val'erol. Valerian camphor, changed by the air into valerianic acid.

Valetudina'rian. Valetudinary.

Valetudinarium, val-a-tu-din-ah're-um (*valetudo*, health). Hospital.

Valetudina'rius. Sickly; valetudinary.

Valetu'dinary. *Valetudinarian.* One of delicate health or subject to frequent diseases. An invalid.

Valetudo, val-a-tu'do. Health. **V. adver'sa**, disease. **V. bo'na**, good health. **V. com'moda**, health. **V. secun'da**, health.

Val'gus (bowlegged). See *Cnemoscoliosis, Talipes*, and *Kyllosis.* **V. spu'rius**, see *Kyllosis.*

Valiga, val-e'gah. Tinctura jalapii.

Valitudo. Health.

Vallecula, val-lek'u-lah (dim. of **Val'lis**). Valley. **V. cerebel'li,** see *Valley.* **V. cor'dis,** depression extending from anterior to posterior longitudinal furrow at apex of heart. **V. glos'so-epiglot'tica,** fossa glosso-epiglottica. **V. ova'ta,** fissure of liver in which the gall-bladder reposes. **V. Reil'ii,** fissure of Sylvius. **V. Syl'vii,** fissure of Sylvius. **V. un'guis,** see *Nail.*

Valleix's points. Points of tenderness occurring along the course of nerves in certain inflammatory and neuralgic conditions.

Vallet's (val'la's) **mass.** Massa ferri carbonatis.

Val'ley. The deep fissure on the inferior part of the cerebellum which divides it into two symmetrical portions and receives the medulla oblongata.

Val'lis. Valley. **V. ala'rum,** valley of the armpits; axilla. **V. fem'orum,** vulva.

Val'lum (a palisaded rampart). The eyebrow or supercilium. Also a species of bandage.

Valo'nia. Cups of large acorns of Quercus Ægilops, native of Levant, containing a large percentage of tannic acid.

Valsal'va, lig'ament of (after Valsalva, the celebrated Italian anatomist). Ligamentous band uniting the pinna of the ear to the temporal bone. **V., si'nuses of,** see *Sinuses.*

Valsal'va's exper'iment. This consists in inflation of the Eustachian tube by closing the nose and mouth, and employing a forcible expiration. **V.'s meth'od,** mode of treatment for internal aneurisms proposed by Valsalva, consisting of general depletion by venesection, purgatives, and restricted diet.

Val'va. Valve. **V. Tul'pii,** ileocæcal valve.

Valve (*valvæ,* folding-doors, itself from *volvo,* to fold up). Any membrane or duplicature of a membrane which prevents a reflux in the vessels and canals of the animal body. There are some valves whose functions appear to be to retard or to modify the course of substances along canals, etc. See *Mitral, Sigmoid, Tricuspid, Ileocæcal valve,* etc. **V. of Am'ussat,** see *Gall-bladder.* **V. of Bau'hin,** see *Bauhin.* **V., cor'onary,** see *Coronary.* **V. of Eustach'ius,** Eustachian valve. **V. of Fallo'pius,** Bauhin, valve of. **V. of gall'-bladder,** Bauhin, valve of. **V., ileocæ'cal,** Bauhin, valve of. **V., ileocol'ic,** Bauhin, valve of. **V. of Kerk'ring,** valvulæ conniventes. **V., mi'tral,** see *Heart* and *Mitral.* **V., pylo'ric,** see *Pylorus.* **V., semilu'nar,** see *Heart* and *Semilunar.* **V. of Thebe'sius,** coronary fold of membrane protecting the coronary sinus. **V., tricus'pid,** see *Heart* and *Tricuspid.* **V. of Tul'pius,** Bauhin, valve of. **V. of Varo'lius,** Bauhin, valve of. **V. of Vieus'sens,** valvula Vieussenii.

Valves of the heart. See *Heart, Mitral, Coronary,* etc. **V., Kerkrin'gian,** valvulæ conniventes. **V., semilu'nar,** sigmoid valves.

Val'vula (dim of **Valva**). Valve. **V. Bauhi'ni,** Bauhin, valve of. **V. cæ'ci,** Bauhin, valve of. **V. cerebel'li,** valvula Vieussenii. **V. co'li,** Bauhin, valve of. **V. Eustach'ii,** Eustachian valve. **V. foram'inis ova'lis,** ovalis fossa. **V. fos'sæ navicula'ris,** transverse duplicature of mucous membrane in urethra at proximal end of fossa navicularis. **V. Guiffartia'na,** see *Thebesius, veins of.* **V. Heis'teri,** see *Gall-bladder.* **V. hymena'lis ure'thræ viri'lis,** valvula fossæ navicularis. **V. il'ei,** Bauhin, valve of. **V. lacryma'lis infe'rior,** duplicature of mucous membrane occasionally at nasal portion of lacrymal duct. **V. lacryma'lis supe'rior,** duplicature of mucous membrane situate in the lacrymal sac below the opening of the lacrymal canals. **V. mag'na cer'ebri,** V. Vieussenii. **V. pylo'rica,** see *Urinary bladder.* **V. semiluna'ris,** a small doubling of the tunica conjunctiva, which lies between the caruncula lacrymalis and the ball of the eye; in birds this is large and called the membrana nictitans. **V. semiluna'ris arteria'rum,** semilunar valves of aorta and pulmonary artery. **V. semiluna'ris cerebel'li,** posterior medullary velum. **V. si'nus sinis'tri,** interauricular valve. **V. Tari'ni,** velum medullare posterius. **V. Thebe'sii,** see *Thebesius, veins of.* **V. Tul'pii,** Bauhin, valve of. **V. vagi'næ,** hymen. **V. ve'næ mag'næ,** see *Thebesius, valve of.* **V. ves'ico-uretra'lis,** see *Urinary bladder.* **V. Vieussen'ii,** a thin medullary lamina over the under end of the aquæductus Sylvii and upper part of the fourth ventricle. At the sides of the valves are two medullary tracts called processus ad testes, columnæ valvulæ Vieussenii, or oblique intercerebral commissure. **V. Willisia'na,** valvula Vieussenii.

Val'vulæ (pl. of **Valvula**). V. bicuspidales; mitral valves. **V. arterio'sæ,** semilunar valves. **V. atrioventricula'res,** auriculo-ventricular valves. **V. conniven'tes** (self-closing valvulæ), *Kerkringian valves* or *Valves of Kerkring;* numerous circular folds in the intestinal canal from the pyloric orifice through the greater part of the small intestine; they are folds of the mucous membrane, and their chief use appears to be to retard the passage of food and to afford a larger surface for the origin of chyliferous vessels. **V. cor'dis,** valves of the heart. **V. cor'dis mitra'les,** mitral valves. **V. cuspida'les,** auriculo-ventricular valves. **V. Kerkring'ii,** valvulæ conniventes. **V. proces'sûs vermifor'mis,** valves occasionally found at orifice of vermiform appendix. **V. semiluna'res,** sigmoid valves. **V. spira'les Heis'teri,** Heister's valves. **V. triglo'chines,** tricuspid valves. **V. trisul'cæ,** tricuspid valves. **V. vena'rum,** valves of veins. **V. veno'sæ,** auriculoventricular valves.

Valvuli'tis. Inflammation of valve of the heart, as in endocarditis.

Van Best's opera'tion. Operation for radical cure of inguinal hernia by means of subcutaneous suturing of the external rings of the inguinal canal.

Vandel'lia diffu'sa (after Vandelli, professor of botany at Coimbra). Native of Brazil, Guiana, and Isle of France; ord. Scrophulariaceæ; used as an antibilious emetic and antiperiodic. Regarded as an efficacious remedy in malignant fever and dysentery, especially in cases connected with a disordered liver.

Vanel'loe. Vanilla.

Vanil'la. Long, flattish pod, containing, under a wrinkled, brittle shell, a reddish-brown pulp with small, shining, black seeds. The parasitic plant which affords this pod is the *Epidendrum vanilla, Vanilla aromatica* or *Mexicana,* and other species. Family, Orchidaceæ. Vanelloes have an unctuous, aromatic taste and fragrant smell, like that of the finer balsams, heightened with musk. Although chiefly used as perfumes, they are reputed to possess aphrodisiac virtues. **V. aromat'ica,** see *Vanilla.*

Vanil'lic ac'id. Substance produced as a result of oxidation of vanillin.

Vanil'lin. Odoriferous principle of vanilla occurring in stellate groups of colorless needles. It is also produced from coniferin and guaiacol. Stimulant in atonic indigestion.

Vanil'lism. Peculiar set of symptoms occurring among workmen in vanilla factories, due to inhalation of vanilla-dust.

Van Swie'ten's solu'tion. Solution of perchloride of mercury (1 to 1000).

Vao. See *Curare.*

Va'por. Flatulence. The Ph. B. has several preparations for inhalation under this head—*Vapores.* **V. ac'idi hydrocyan'ici,** *Inhalation of hydrocyanic acid* (acid. hydrocyanic. dilut., ♏x-xv; aquæ frigid., f℥j; Ph. B.). **V. bath,** vaporarium. **V. chlo'ri,** *Inhalation of chlorine* (calcis chlorinat., ℥ij; aquæ frigid., q. s.; Ph. B.). **V. coni'næ,** *Inhalation of conine* (succi conii, f℥ss; liquor. potassæ, f℥j; aquæ destillat., f℥j; put 20 minims of the mixture on a sponge in a suitable apparatus, so that the vapor of hot water passing over it may be inhaled; Ph. B.). **V. creaso'ti,** *Inhalation of creasote* (creasot., ♏xij; aquæ bullient., f℥viij; Ph. B.). **V. i'odi,** *Inhalation of iodine* (tinct. iodi, f℥j; aquæ, f℥j; Ph. B.). **V. o'lei pi'ni sylves'tris,** *Inhalation of fir-wool oil* (fir-wool oil, ♏xl; light carbonate of magnesium, gr. xx; water, q. s. to make f℥j). **V. san'guinis,** vapor of the blood; gaz sanguinis. **V. ten'sion,** elastic or expansile force of vapor.

Vapora'rium (*vapor*, steam). *Vapor bath.* A remedy in rheumatic and cutaneous affections and wherever it is important to impress the cutaneous surface. In the Russian vapor bath the vapor is produced by throwing water over hot stones, and the bather, after being rubbed down, passes at once from the heated condition to cool or cold water, not only with impunity, but with positive pleasure. Its temperature is from 122° to 145°. Trousseau has suggested, in the treatment of phthisis, a vaporarium—a room filled with steam—in which the patient always remains, thus imitating the atmosphere of a moist, warm climate. Sweating-place in ancient baths. Furnace for heating baths. See *Stove.*

Vaporatio, vap-or-ah'she-o (*vaporo*, to emit steam or vapor). Evaporation.

Vapo'res (pl. of **Vapor**). See *Vapor.* **V. uteri'ni,** hysteria.

Va'porish. Hypochondriac; hysterical.

Vaporization, va-por-i-za'shun. Conversion of solids or liquids into vapor.

Va'porous. Windy.

Va'pors. Hypochondriasis; hysteria.

Va'pory. Hypochondriacal; hysterical.

Varec' (wrack). Kelp. See *Soda.*

Vare'ni. Mobile and periodical tumors affecting different parts. Gout (wandering).

Varia'tion. Deviation in form, position, state, or qualities of the same individual; may be due to change of environment.

Varicella, var-e-sel'lah (dim. of **Variola**). *Chickenpox.* A disease characterized by vesicles scattered over the body, which are glabrous, transparent, and about the size of peas. They appear in successive crops, are covered by a thin pellicle, and about the third, fourth, or fifth day from their appearance burst at the top and concrete into small, puckered scabs, which rarely leave a pit in the skin. Three varieties have sometimes been designated: 1. The V. lentiformes or lenticular chickenpox, which are irregularly circular and flattened on the top; the fluid being at first whitish, and afterward straw-colored; this is the common chickenpox. 2. The varicella coniformis, variously named pemphigus variolodes, variola lymphatica, crystalli, hydrachnis, varicella verrucosa, variolæ verrucosæ, conoidal chickenpox, glasspox, windpox, sheeppox, swinepox, waterpox, waterjags, in which the vesicles are generally acuminated and the fluid is pellucid throughout. 3. The *Varicella globularis* or *Hives*, in which the vesicles are globular and larger, the fluid being at first whey-colored, and afterward yellowish. These divisions, are, however, very arbitrary, for they are often confounded. *Hornpox* is a papular variety of varicella. **V. pruri'go,** variety described by Hutchinson in which there are successive crops of vesicles which may go on to ulceration. **V. varioloï'dea,** varioloid. **V. verruco'sa,** see *Varicella.*

Varicel'lar fever. See *Varioloid.*

Variciform, var'is-e-form. Resembling a varix.

Varicifor'mes paras'tatæ (*varix, forma*, form). Term applied to the ducts of the epididymis, because they seem knotty and varicose.

Varicoblepharon, var-ik-o-blef'ar-on (*varix, blepharon*, eyelid). A varicose tumor of the eyelid.

Varicoce'le (Eng. var'ik-o-seel) (*varix, kele*, tumor). A varicose dilatation of the veins of the scrotum and spermatic cord. This latter variety of the disease is more common on the left side than on the right. It appears under the form of a soft, doughy, unequal, knotty, compressible, and indolent tumor, situate in the course of the cord and increasing from below upward. It is less when the individual is in the recumbent posture, and increases when he is erect; ordinarily an affection of no moment, requiring merely the use of a proper suspensory bandage.

Varicomphalus, var-ik-om'fal-us (*varix, omphalos*, navel). Varicose tumor of umbilicus; cirsomphalus

Varicose, var'i-kose (*varix*). *Varicous.* Affected with varix or belonging to or connected with varix, as a varicose vein.

Varicositas, var-e-kos'it-as. See *Varix.* **V. conjuncti'væ,** cirsophthalmia.

Varicosity, var-e-kos'it-e. See *Varix.*

Varicula, var-ik'u-lah (dim. of **Varix**). Varix. Varicose swelling of veins of conjunctiva.

Vari'ola (*varius*, spotted, *vari*, pimples). Small-pox. Very contagious disease characterized by fever, with pustules appearing from the third to the fifth day, and suppurating from the eighth to the tenth, and possessing all the distinctive properties of the major exanthemata. It is capable of being produced by inoculation, but this inoculated small-pox—variola inserta—communicates the disease as readily through the air as the natural small-pox, or that received without inoculation. Small-pox is divided into two classes, according to the character of the eruption—the discrete or distinct and the confluent: 1. In variola discreta, *Empyesis variola discreta, Variola discreta benigna, Variolæ regulares discretæ, Distinct small-pox*, the pustules are usually the size of peas, distinct, distended, and circular, the intervening spaces being red; the fever inflammatory throughout, and ceasing when the eruption is complete. 2. In variola confluens, *Empyesis variola confluens, Variolæ regulares confluentes, Vesiculæ divæ barbaræ, Confluent small-pox*, the pustules are confluent or run together; flaccid and irregularly circumscribed; the intervening spaces being pale, and the accompanying fever typhoid. In children diarrhœa, and in adults ptyalism, with swelling of the hands and feet, generally appear toward the period of the secondary fever, which occurs from the tenth to the thirteenth day. The fever that precedes and accompanies the eruption is called the eruptive fever. The prognosis is favorable to the distinct kind if properly managed. The confluent is always dangerous, the unfavorable symptoms being flattening of the pustules or subsidence of the eruption, the breathing becoming much obstructed or oppressed, or marks of inflammatory and congestive affections occurring in the different viscera. When the pimples are confluent in patches, the patches being, however, separated by intervals of unaffected skin, it constitutes the clustered, coherent, or corymbose variety—variola corymbosa. When there are comparatively few pustules, and the general eruption scarcely passes beyond the vesicular stage, the term varicelloid small-pox, variola curta, has been applied to it. Other forms of variolæ have been mentioned, such as the petechial and hemorrhagic, V. cruenta or black pox, V. gangrænosa, etc. **V. Amboinen'sis,** frambœsia. **V. con'fluens,** see *Variola.* **V. corymbo'sa,** see *Variola.* **V. cur'ta,** varicelloid. **V. discre'ta,** see *Variola.* **V. inser'ta,** variola (by inoculation). **V. lymphat'ica,** varicella. **V. mitiga'ta,** varioloid. **V. modifica'ta,** varioloid. **V., o'vine,** a disease of sheep resembling, but not identified with, small-pox in man. **V. semicon'fluens,** the pustules touch each other without coalescing. **V. sine vari'olis,** *Variolous fever;* occasionally observed during prevalence of variola, in which constitutional phenomena are present without cutaneous eruption. **V. spu'ria,** varicella. **V. vacci'na,** vaccina. **V. vaccinato'rum,** varioloid. **V. varicellifor'mis,** see *Variola.*

Vari'olæ. Variola. **V. equi'næ,** see *Grease.* **V. illegit'imæ,** varicella. **V. modifica'tæ,** varioloid. **V. no'thæ,** varicella. **V. pucel'læ,** varicella. **V. sylves'tris,** varicella. **V. tutor'iæ,** vaccina. **V. ve'ræ,** variola. **V. verruco'sæ,** see *Variola.* **V. volat'icæ,** varicella.

Variolate, var-i'o-late (*variola*). Having resemblance to pustular eruption of variola.

Variola'tion. Inoculation (small-pox).

Vari'oli. Variola.

Variolic, var-i'o-lik. Variolous.

Variolization, var-i-ol-i-za'shun. Inoculation of small-pox.

Varioloid, var'e-o-loid (*variola*, small-pox, *eidos*, resemblance). *Abortive small-pox.* Small-pox modified by previous inoculation or vaccination, and hence properly called modified small-pox. It is almost always a milder disease than small-pox, and this

circumstance, with its shorter duration, exhibits the salutary effects of previous vaccination or inoculation. It has appeared epidemically. Occasionally, when varioloid is epidemic, varioloid or varicellar fever occurs without the eruption. This is the *varicellæ sine varicellis* of Mr. Erasmus Wilson, who calls varioloid *varicella*. **V. fe'ver**, see *Varioloid*.

Var'iolois. Varioloid.

Variolous, var-i'o-lus. Relating or belonging to variola.

Variolovaccina'tion. Inoculation with variolovaccine lymph.

Va'rix (*vario*, to turn or twist). *Varicose vein.* Permanent dilatation of a vein, *Varicosity.* Varices are owing to local retardation of the venous circulation, and, in some cases, to relaxation of the parietes of the veins. They are very common in the superficial veins of the lower limbs, especially of pregnant females. The tumor or tumors formed by varices are soft, knotty, unequal, indolent, and livid, without pulsation, and yielding readily to the impression of the finger, but returning as soon as the compression is discontinued. **V., aneuris'mal**, see *Aneurism, arteriovenous.* **V. aneuris'micus**, see *Aneurism, arteriovenous.* **V., arte'rial**, see *Aneurism.*

Varo'lian bend. Middle of three primary flexures of the embryonic mammalian brain, situate anteriorly, between the hind- and after-brain.

Varo'lius, bridge of. Pons Varolii.

Va'rus (*varius*, spotted). A spot or pimple on the face; acne, ianthus. Also entogonyancon and kyllosis (*varus*, having the legs bent). Talipes. **V. com'edo**, comedo. **V. ment'agra**, sycosis. **V. puncta'tus**, see *Acne.* **V. seba'ceus**, seborrhœa.

Vas. Vessel; penis. **V. aber'rans Hal'leri**, vasculum aberrans. **V. af'ferens**, afferent vessel. **V. def'erens mulie'bris**, tuba Fallopiana. **V. ef'ferens**, efferent vessel. **V. epididym'idis**, canal of epididymis. **V. Hal'leri**, vasculum aberrans. **V. spira'le**, a small vein imbedded in the membrana basilaris of the cochlea, connected with the vessels of the lamina spiralis ossea. **V. urina'rium**, ureter.

Va'sa (pl. of **Vas**) **aberran'tia.** Peculiar ramifications of the biliary duct in the liver. Also long slender vessels sometimes connecting the brachial or capillary arteries with one of the arteries of the forearm. **V. absorben'tia**, absorbent vessels. **V. afferen'tia**, see *Afferent* and *Efferent.* **V. bre'via**, see *Brevia vasa.* **V. capilla'ria**, capillary vessels. **V. capriola'ria**, spermatic vessels. **V. centra'lia ner'vi op'tici**, central vessels of optic nerve. **V. chylif'era** or **chylof'era**, chyliferous vessels. **V. chylopoët'ica urinif'era**, blood-vessels which convey fluids from the chyliferous vessels to the renal veins. **V. cilia'ria**, ciliary arteries and veins. **V. efferen'tia**, see *Afferent* and *Efferent.* **V. excreto'ria tes'tis**, see *Efferent.* **V. exhalan'tia**, exhalant vessels. **V. Graafia'næ**, see *Efferent.* **V. hep'atis aberran'tia**, aberrant ducts of liver. **V. hep'atis interlobula'ria**, interlobular veins of liver. **V. hydrago'ga**, lymphatic vessels. **V. inferen'tia**, see *Afferent* and *Efferent.* **V. intesti'ni ten'uis**, branches of the superior mesenteric artery distributed to the jejunum and ileum. **V. lac'tea**, chyliferous vessels; lactiferous vessels. **V. lymphat'ica**, lymphatic vessels. **V. menin'gea**, meningeal vessels. **V. nutrien'tia**, vasa vasorum. **V. nutrit'ia**, vasa vasorum. **V. rec'ta**, see *Rete testis.* **V. resorben'tia**, absorbent vessels; lymphatic vessels. **V. seda'lia**, hæmorrhoidal vessels. **V. sero'sa**, see *Capillary vessels.* **V. serpenti'na tes'tis**, seminiferous tubules. **V. vaso'rum**, vessels of vessels; small vessels which supply the parietes of larger ones with blood for their nutrition. The cardiac or coronary arteries and veins may be regarded as the vasa vasorum of the heart. **V. vortico'sa** (*vortex*, a whirlpool), the contorted vessels which creep on the choroid coat of the eye; ciliary veins.

Va'sal (*vas*, a vessel). Vascular.

Vasco'a amplexicaul'is (after Vasco de Gama). S. African shrub, ord. Leguminosæ, the roots of which taste like licorice. They are used, in decoction, in catarrh and phthisis, and are a good substitute for licorice. **V. perfolia'ta**, native of South Africa, used as a diuretic.

Vascula (pl. of **Vasculum**) **serpenti'na.** See *Testicle.*

Vascular, vas'ku-lar (*vas*, a vessel, *vasculum*, a little vessel). That which belongs or relates to vessels, arterial, venous, or lymphatic, but generally restricted to blood-vessels only. Full of vessels. The *Vascular system* includes the blood-vessels as follows: 1. Arterial system, or system of red blood, commencing with the radicles of the pulmonary veins and including the pulmonary veins, the left cavities of the heart, and the aorta with all its ramifications. The blood in this system is distributed to the general capillary system, where it loses its arterial quality and becomes venous. 2. Venous system or vascular system of black blood, carrying the blood from every part of the system to the lungs. It takes its origin in the general capillary system, continues in the veins, right auricle and ventricle of the heart, and the pulmonary artery and its branches, and is finally lost in the capillary system of the lungs. See *Circulation.* **V. glands**, see *Ganglion.* **V. lay'er**, see *Germinal layer.* **V. papil'læ**, papillæ of skin devoid of tactile corpuscles. **V. rad'icles**, radical vessels. **V. sub'stance of the kid'ney**, see *Kidney.* **V. sys'tem**, see *Vascular.* **V. sys'tem, interme'diate**, capillary system. **V. sys'tem, periph'eral**, capillary system. **V. tu'mor**, see *Hemorrhoids.* **V. tu'mor of the ure'thra**, see *Urethra.*

Vascularity, vas-ku-lar'it-e. The state of being vascular or largely supplied with vessels.

Vascularization, vas-ku-lar-i-za'shun. Formation and extension of blood-vessels in a part; also applied to condition of bone associated with fungating ostitis, in which the tissue becomes canaliculated, and is said by some observers to be occupied by capillary vessels.

Vasculomo'tor. Vasomotor.

Vasculo'sa (*vasculum*, vessel). Choroid coat of eye.

Vas'culum (dim. of **Vas**, a vessel). Vessel; penis. **V. aber'rans** (*aberro*, to wander from), *Aberrant duct, Appendix to the epididymis*, small convoluted duct, of variable length, generally connected with the duct of the epididymis, immediately before the commencement of the vas deferens. **V. sanguinif'erum**, blood-vessel. **V. serpenti'num**, seminiferous tubules.

Vas'eline. Petrolatum.

Vasicine, vas-i'seen. Alkaloid from leaves of Adhatoda vasica.

Vasifac'tive (*vasculum*, vessel, *facio*, to make). Producing vessels.

Vasoconstric'tor. Vasomotor.

Vasocoro'na. System of blood-vessels which penetrate the spinal cord and supply its substance.

Vasoden'tine (*vasum*, vessel, *dens*, tooth). Modification of the dentine by the permanent distribution of red blood to it through vascular canals.

Vasodila'tor cen'tre. Hypothetical centre supposed to have control over the dilating mechanism of the arteries. **V. nerves**, nerves which, when stimulated, cause relaxation and rest of the arteries.

Vasoform'ative cells. Highly refractive cells of variable shape existing in the omentum of young rabbits, which are the seat of origin of non-nucleated red blood-corpuscles.

Vasohypoton'ic. Vasodilator.

Vaso-inhib'itory nerves. Vasodilator nerves.

Vasomo'tor (*vas*, a vessel, *motor*, mover). That which causes relaxation or contraction in the blood-vessels. **V. cen'tres**, hypothetical centres situate in the medulla oblongata and spinal cord, having control over the vasomotor mechanism. **V. nerves**, nerves connecting the vasomotor centres with the motor mechanism of the blood-vessels.

Vas'tus. Vast or great in extent, as **V. exter'nus** and **V. inter'nus**, two considerable fleshy masses which form part of the triceps cruris; see *Triceps.*

Va'sum. Vessel.

Va'ter, ampul'la of (after Vater, German anatomist). Ampulla formed by the orifice of the pancreatic

duct in the duodenum. **V., cor'puscles of,** corpuscles, Pacinian. **V., fold of,** fold of mucous membrane of duodenum above opening of pancreatic duct.

Vate'ria In'dica (after Abraham Vater, a physician and botanist of Wittenberg). See *Copal.*

Vaticin'ium chiroman'ticum (*vaticinor*, to foretell). Chiromancy.

Vault (*volvo*, to turn). Name given to parts which are rounded superiorly, concave and arched inferiorly, as the vault of the cranium or upper part of the skull, the palatine vault or roof of the mouth, etc.

Vault'ing of the chest. Precordial elevation or arching of the parietes of the thorax in the new-born child, in hypertrophy of the heart, etc.

Vauqueline (after Vauquelin, the French chemist). Strychnia.

Veal broth. Veal tea. **V. tea** may be made in the same manner as beef tea, using a pound of fillet of veal, free from fat and sliced, and a pint and a half of boiling water, and boiling for half an hour. It may also be made of the fleshy part of a knuckle of veal.

Vecor'dia. Want of reason; idiotism. Insanity.

Vec'tis, (*veho, vectum*, to carry). Lever; instrument with curved blade, similar to one blade of short straight obstetrical forceps, used as a lever to assist delivery of the head. **V. elevato'rius,** elevator. **V. triploï'des,** triploid elevator.

Vec'tor canal' (*veho, vectum*, to carry). Fallopian tube.

Veg'etable (*vegeo*, to flourish). Appertaining or relating to plants. A vegetable is an organized being devoid of sensation and voluntary motion, which receives its nutriment, essentially, by the roots. The study of vegetables is *Phytology.* **V. albu'min,** substance corresponding to egg or serum albumin, found in juices and seeds of certain plants; noted especially in juice of papaw. **V. an'timony,** Eupatorium perfoliatum. **V. brim'stone,** lycopodium. **V. ca'sein,** substance corresponding to animal casein, existing in seeds of Leguminosæ, especially peas, beans, lentils, hops, and almonds. **V. fi'brin,** gluten-casein. **V. food,** this includes quite a variety of articles containing albumen and fat and an excess of non-nitrogenous over the nitrogenous constituents. They are chiefly carbohydrates, and are generally less digestible than animal aliments. **V. gold,** pipitzahoic acid. **V. mer'cury,** root of Anchieta salutaris and Franciscea uniflora; antisyphilitic. **V. my'osin,** vegetable substance resembling animal myosin in seeds of certain plants. **V. paraglo'bin,** substance having same properties as animal paraglobin, discovered in papaw juice. **V. pole,** collection of dentoplasm or food yolk in one part of the ovum, as opposed to protoplasm or the animal part at the animal pole. **V. sponge,** fabric made of vegetable fibres of fruit of Luffa Ægyptiaca; used as a flesh-brush in bathing. **V. sul'phur,** lycopodium. **V. wax,** calcareous product, resembling beeswax, in several plants.

Vegeta'ity (*vigeo*, to be active). Aggregate of physiological phenomena existing alone in vegetables, but common to plants and animals. See *Animality.*

Vegeta'rian. See *Vegetarianism.*

Vegeta'rianism (same etymon as *Vegetation*). A term employed to designate the view that man, for his full mental and corporeal development, ought to subsist on the direct productions of the vegetable kingdom, and totally abstain from flesh and blood. An advocate of this doctrine is called a *Vegetarian.*

Vegeta'tion (*vegeo*, to be active, to grow like a plant). A morbid production like an excrescence on an organ or part, as on the heart-valves. A fleshy granulation, *Hypersarcosis,* at the surfaces of wounds or ulcers. **V., dendrit'ic,** cancer, villous.

Veg'etative. Having relation to growth or nutrition, as vegetative functions. **V. pole,** vegetable pole.

Ve'hicle (*veho*, to carry). Anything which serves to carry; thus, air is the vehicle of sound, the arteries are the vehicles of the blood, etc. In pharmacy a vehicle is an excipient, or substance serving as the medium of administration for medicine.

Veiled puff. See *Cavernous respiration.*

Vein. The veins are vessels for the conveyance of blood from every part of the body to the heart. They are found wherever there are arteries, and altogether form the venous system, which may be subdivided into two distinct secondary systems: 1. The *General venous system,* which commences in all the organs by very minute radicles, and terminates in the heart by the cava and coronary vein. 2. The *Abdominal venous system,* which is limited to the abdominal cavity; commences, also, by a great number of branches, and terminates in the liver by a single trunk, which subdivides in that organ. It is called also the system of the vena porta or the portal system. See *Porta.* The veins form two sets—one deep-seated, venæ satellites or comites or concomites, which accompany the arteries; the other, superficial or subcutaneous. Their parietes, which are thinner than those of the arteries, are composed of three coats: the outermost, of areolar tissue interwoven with elastic fibres or a muscular stratum in the larger veins; the middle coat, elastic, with muscular fibres, the proper membrane; the other, the common or inner membrane, which is thin, polished, and has numerous duplicatures or folds forming parabolic valves, which are most numerous in the veins of the lower extremities. The coats of the veins are supplied with small arteries or vasa vasorum, veins, and lymphatics. The nervous filaments—vasomotor—are from the great sympathetic nervous system.

TABLE OF VEINS.

1. VEINS WHICH FORM THE SUPERIOR VENA CAVA.

- 1. Subclavians, which receive the
  - 1. Axillary
    - 1. Basilic, formed of the
      - 1. Posterior ulnar.
      - 2. Anterior ulnar.
      - 3. Median basilic.
    - 2. Cephalic, forming the
      - 1. Superficial radial.
      - 2. Median cephalic.
    - 3. Circumflex veins.
    - 4. Inferior scapular.
    - 5. Long thoracic.
    - 6. Superior thoracic.
    - 7. Acromial veins.
  - 2. External Jugular.
    - 1. Internal maxillary, composed of the
      - 1. Pterygoid.
      - 2. Sphenopalatine.
      - 3. Alveolar.
      - 4. Infra-orbitar.
      - 5. Mental.
      - 6. Inferior dental.
      - 7. Deep temporal.
    - 2. Superficial temporal, composed of the
      - 1. Middle temporal.
      - 2. Anterior auriculars.
      - 3. Transverse of the face.
    - 3. Posterior auricular. The trunk then takes the name of external jugular, and in its course along the neck receives—
    - 4. Cervical cutaneous.
    - 5. Tracheloscapular, etc.
  - 3. Internal Jugular.
    - 1. Superior cerebral veins.
    - 2. Veins of the corpus striatum.
    - 3. Veins of the choroid plexus.
    - 4. Superior cerebellar veins.
    - 5. Inferior cerebellar veins.
    - 6. Lateral and inferior cerebral veins.
    - 7. Ophthalmic vein, composed of the
      - 1. Lacrymal.
      - 2. Central of the retina.
      - 3. Infra-orbitar.
      - 4. Ciliary.
      - 5. Ethmoidal.
      - 6. Palpebral, and
      - 7. Nasal veins.
    - 8. Facial vein, called angular, near the eye, receiving the
      - 1. Palpebral, and
      - 2. Superciliary veins.
      - 3. Dorsals of the nose.
      - 4. Superior } Coronaries
      - 5. Inferior } of the lip.
      - 6. Several buccal, and
      - 7. Masseteric veins.
      - 8. Ranine.
      - 9. Submental, and
      - 10. Inferior palatine.
    - 9. Lingual and pharyngeal veins.
    - 10. Superior thyroid.
    - 11. Occipital, and
    - 12. Veins of the diploë.
- 2. Right internal mammary vein.
- 3. Inferior thyroid vein, opening into the vena cava, between the two subclavians.
- 4. Vena azygos, which receives the
  - 1. Right bronchial.
  - 2. Intercostal veins.
  - 3. Semi-azygos.

2. VEINS WHICH FORM THE INFERIOR VENA CAVA.

1. Common Iliacs.
- 1. External iliacs, formed by the—
  - 1. Femoral or crural, which is a continuation of the
  - 2. Popliteal, commencing by 3. Veins which accompany the fibular arteries, and receiving the—
    - 1. Several abdominal veins.
    - 2. Circumflex iliac, and
    - 3. External pudic veins.
  - 1. External saphena and
  - 2. Internal saphena, which receive—
- 2. Internal iliacs, which receive the—
  - 1. Vesical veins, commencing with the—
    - 1. Dorsal veins of the penis in the male.
    - 2. Veins of the clitoris in the female.
  - 2. Sacrolateral veins.
- 3. Middle sacral vein.
- 4. Lumbar veins—four in number on each side, commencing by —
  - 1. An abdominal branch.
  - 2. A dorsal branch.
- 5. Spermatic veins, commencing with
  - 1. Spermatic plexus in the male.
  - 2. Veins of the ovarium, Fallopian tube, etc. in the female.
- 6. Renal veins.
- 7. Capsular and adipose veins.
- 8. Hepatic veins.
- 9. Middle, 10. Left, and 11. Right — hepatic veins.
- 12. Inferior diaphragmatic veins, two in number.

3. VEINS OF THE HEART.

1. Great right coronary.
2. Small right coronary.
3. Left coronary veins.

4. VEINS WHICH FORM THE VENA PORTA.

1. Splenic vein.
   1. Veins which correspond to the vasa brevia.
   2. Right and left gastro-epiploic.
   3. Duodenal, and
   4. Pancreatic veins.
   5. Coronary vein of the stomach, and
   6. Small mesenteric vein.
2. Superior mesenteric vein.

Vein of al'æ na'si. Tributary of the angular vein. **V., an'gular,** formed by junction of supraorbital and frontal veins. **V., artic'ular, of knee,** branch of the popliteal vein. **V., aud'itory,** veins of the vestibule and semicircular canals. **V., auric'ular ante'rior,** tributary of the temporal vein from the external ear; see *Auricular vein.* **V., a. poste'rior,** vein descending behind the external ear and joining the temporomaxillary vein; see *Auricular vein.* **V., ax'illary,** large vein formed by junction of the venæ comites of the brachial artery with the basilic vein; see *Axillary vein.* **V., az'ygos, left lower,** vein commencing by branch of ascending lumbar or left renal vein, terminating in right azygos vein; see *Azygous.* **V., a., left upper,** vein receiving tributaries from the intercostal spaces; see *Azygous.* **V., a., right,** veins arising from right lumbar veins, right renal vein, or inferior vena cava, and terminating in superior vena cava; see *Azygous.* **V., basil'ic,** vein formed by coalescence of the common ulnar vein with the median basilic; see *Basilic vein.* **V., basiver'tebral,** veins belonging to the body of the vertebræ. **V. of bone,** veins connected with the nutrition of the long and flat bones, running in tortuous canals in the diploic tissue of flat bones. **V., bra'chial,** veins uniting with the basilic to form the axillary vein; see *Brachial veins.* **V., brachiocephal'ic,** see *Innominate vein.* **V. of Breschet,** see *Diploic.* **V., bron'chial,** veins returning blood from the substance of the lungs; the right opens into the vena azygos major, the left into the upper azygos vein. **V., buc'cal,** branch of the internal maxillary vein. **V., car'diac,** veins which return the blood from the substance of the heart; see *Cardiac.* **V., c., ante'rior,** three or four small veins collecting blood from anterior surface of right ventricle. **V., c., great,** large vessel commencing at apex of heart and opening into the coronary sinus. **V., c., poste'rior,** three or four small vessels collecting blood from posterior surface of left ventricle. **V., car'dinal,** ascending veins from the parietes of the trunk of the fœtus and the Wolffian bodies. **V., ca'va, infe'rior,** see *Cava vena.* **V., c., supe'rior,** see *Cava vena.* **V., cephal'ic,** vein passing along outer border of biceps muscle, terminating in the axillary vein; see *Cephalic veins.* **V., cerebel'lar,** veins occupying the surface of the cerebellum; they are superior, inferior, and lateral. **V., cer'ebral,** veins with thin coats occupying the surface and interior of the cerebrum. **V., cer'vical, ascend'ing,** anterior vertebral vein, opening into the vertebral vein. **V., c., deep,** posterior vertebral vein, accompanying the profunda cervicis artery. **V., cho'roid, of brain,** vein running along outer border of the choroid plexus, uniting to form the vein of the corpus striatum. **V., cir'cumflex il'iac,** tributary of the external iliac vein. **V., c. superfic'ial,** tributary of the internal saphenous vein at the saphenous opening. **V., con'dyloid, poste'rior,** tributary to vertebral vein through the posterior condyloid foramen. **V., cor'onary,** see *Cardiac veins.* **V. of cor'pora caverno'sa,** veins on upper surface of corpora cavernosa joining the dorsal vein. **V. of cor'pus spongio'sum,** veins from corpus spongiosum to dorsal vein of the penis. **V. of cor'pus stria'tum,** a cerebral vein uniting with the choroid to form one of the venæ Galeni. **V., cys'tic,** a tributary vein of the vena portæ. **V., deep,** or **ve'næ com'ites,** companion veins to the arteries. **V., demiaz'ygous,** see *Azygous.* **V., den'tal, infe'rior,** tributary of the internal maxillary vein. **V., dig'ital, of the hand,** two digital veins accompanying each corresponding artery. **V. of dip'loë,** large veins in the interior of the diploë of the cranial bones. **V., diploet'ic,** see *Diploic.* **V., dorsa'lis na'si,** small veins from dorsum of nose terminating in the nasal arch. **V., d. pe'dis,** venæ comites of the dorsalis pedis artery. **V., dorsispi'nal,** veins placed on the exterior of the spinal column. **V., d., of pe'nis,** large vein which returns the blood from the body of that organ, finally entering the prostatic plexus. **V., epigas'tric,** a tributary vein of the external iliac. **V., e., superfic'ial,** a tributary of the femoral vein, entering it at the saphenous opening. **V. of eye'ball,** formed mainly by branches from the surface of the choroid and ending in the ophthalmic vein. **V., fa'cial,** the direct continuation of the angular vein on the outer side of the facial artery; see *Facial vein.* **V., fem'oral,** continuation of the popliteal vein, accompanying the femoral artery. **V., fron'tal,** vein running downward near the middle line of the forehead, forming with its fellow of the opposite side, at the root of the nose, the nasal arch. **V. of Ga'len,** two veins formed by the union of two other veins, the vena corporis striati and the choroid vein, on either side. **V., gas'tric,** two veins, one corresponding to the pyloric branch of the hepatic artery; the other, larger, to the gastric artery. **V., gas'tro-epiplo'ic,** two veins, the right being a tributary of the superior mesenteric vein, the left a tributary of the splenic vein. **V., glute'al,** one of the veins supplying blood from the exterior of the pelvis to the internal iliac vein. **V., hemorrhoi'dal,** three veins, the superior being a tributary of the inferior mesenteric, and uniting with the middle and inferior hemorrhoidal, which terminate in the internal iliac, to form the hemorrhoidal plexus. **V., hepat'ic,** three large veins, commencing in the substance of the liver and opening into the inferior vena cava; see *Hepatic veins.* **V., il'iac, com'mon,** veins formed by the union of the external and internal iliac veins in front of the sacroiliac articulation, uniting to form the inferior vena cava. **V., i., exter'nal,** commences at the termination of the femoral vein, beneath the crural arch, uniting with the internal iliac to form the common iliac. **V., i., inter'nal,** formed by the venæ comites of the branches of the internal iliac artery, the umbilical arteries excepted; see *V., iliac, external.* **V., il'io-lum'bar,** tributary to the common iliac vein. **V., infe'rior ca'va,** see *Vena cava inferior.* **V., innom'inate,** two large trunks on each side of the root of the neck, formed by the union of the internal jugular and subclavian veins of the corresponding side; see

Innominatæ. **V., intercos'tal, supe'rior,** the right is a tributary of the right innominate vein; the left, of the left innominate vein; see *Intercostal veins.* **V., interlob'ular, of kid'ney,** veins passing inward between the pyramids of Ferrein, joining the venæ rectæ to form the proper renal veins. **V., i., of liver,** see *Liver.* **V., interos'seous, of fore'arm,** veins accompanying the anterior and posterior interosseous arteries. **V., intralob'ular, of liv'er,** see *Hepatic veins.* **V., ju'gular, ante'rior,** one, sometimes two, commencing near the hyoid bone and opening into the termination of the external jugular or into the subclavian vein; see *Jugular veins.* **V., j., exter'nal,** formed by the junction of the posterior division of the temporo-maxillary and posterior auricular veins, receiving the greater part of the blood from the exterior of the cranium and deep parts of the face, and terminating in the subclavian vein; see *Jugular veins.* **V., j., e. poste'rior,** superficial vein of the neck, opening into the external jugular; see *Jugular veins.* **V., j., inter'nal,** formed by coalescence of the lateral and inferior petrosal sinuses, collecting the blood from the interior of the cranium and superficial parts of the face and neck, and uniting with the subclavian vein to form the vena innominata; see *Jugular veins.* **V. of kid'ney,** see *Kidney.* **V., la'bial, infe'rior,** tributary of the facial vein; see *Labial veins.* **V., l., supe'rior,** tributary of the facial vein; see *Labial veins.* **V., larynge'al,** a branch of the inferior thyroid; see *Laryngeal veins.* **V., lat'eral sac'ral,** tributary of the common iliac. **V., lin'gual,** veins on the tongue accompanying the lingual artery. **V. of liv'er,** see *Liver.* **V., longitu'dinal, infe'rior,** the inferior longitudinal sinus, terminating in the straight sinus. **V., lum'bar,** these are three or four in number on each side, collecting blood from the loins and abdominal walls, and terminating at the back part of the inferior vena cava. **V., l., ascend'ing,** a longitudinal vessel passing in front of the transverse processes of the lumbar vertebræ and communicating with each lumbar vein. **V., mam'mary, inter'nal,** see *Mammary veins.* **V., masseter'ic,** see *Masseteric vein.* **V., mas'toid,** a tributary of the occipital vein. **V., max'illary, inter'nal,** large vein receiving branches corresponding with those of the artery of the same name, uniting with the temporal vein to form the temporo-maxillary. **V., me'dian basil'ic,** see *Basilic.* **V., m. cephal'ic,** see *Cephalic.* **V., medullispi'nal,** veins of the spinal cord. **V., meninge'al,** tributaries of the internal maxillary vein. **V., meningorhachid'ian,** veins situate in the interior of the spinal canal between the vertebræ and the theca vertebralis. **V., mesenter'ic, infe'rior,** see *Mesenteric.* **V., m., supe'rior,** see *Mesenteric.* **V., na'sal,** transverse trunk connecting the frontal veins of each side. **V., oblique,** remnant of obliterated left innominate vein of the fœtus. **V., ob'turator,** see *Obturator.* **V., occip'ital,** see *Occipital.* **V., œsophage'al,** a tributary of the inferior thyroid. **V., ophthal'mic,** see *Ophthalmic.* **V., ova'rian,** analogues of the spermatic veins in the male, forming a plexus communicating with the uterine plexus; see *Spermatic veins.* **V., pal'atine, infe'rior,** a tributary of the facial vein. **V., palatola'bial,** facial vein. **V., pal'mar, deep,** veins accompanying the deep palmar arch; see *Palmar arches.* **V., pal'pebral, infe'rior,** a tributary of the facial vein. **V., p., supe'rior,** a tributary of the angular vein. **V., pancreat'ic,** branches from the pancreas to the splenic vein. **V., pancreat'ico-duode'nal,** a tributary of the splenic vein. **V., parot'id,** a tributary of the temporal vein in the parotid region. **V., perone'al,** veins accompanying the peroneal artery. **V., peroneomalle'olar,** saphena minor. **V., pharynge'al,** commencing in the pharyngeal plexus, terminates in the internal jugular. **V., phren'ic,** these veins follow the course of the phrenic arteries. **V., plan'tar,** the external and internal plantar veins unite to form the posterior tibial. They accompany the posterior tibial artery. **V., poplite'al,** formed by junction of the venæ comites of the anterior and posterior tibial vessels, and becoming the femoral vein. **V., por'tal,** see *Porta vena.* **V., profun'da fem'oris,** branch of the femoral vein near its termination. **V., pter'ygoid plex'us,** a large plexus formed by branches of the internal maxillary vein. **V., pu'dic, exter'nal,** a tributary of the femoral vein, entering it at the saphenous opening. **V., p., inter'nal,** a tributary of the internal iliac vein. **V., pul'monary,** see *Pulmonary.* **V., ra'dial,** commencing by various tributaries and communicating veins, it passes along the radial side of the forearm as a large vessel, uniting at the elbow with the median cephalic to form the cephalic. **V., ran'ine,** a tributary of the facial vein, and sometimes of the lingual. **V., re'nal,** see *Vein* and *Kidney.* **V., sac'ral, lat'eral,** branches of the common iliac. **V., s., mid'dle,** veins accompanying artery of same name and terminating in the left common iliac vein. **V., salvatel'la,** see *Salvatella.* **V., saphe'nous, exter'nal** or **short,** see *Saphena.* **V., s., inter'nal** or **long,** see *Saphena.* **V., sciat'ic,** one of the important veins that supply blood from the exterior of the pelvis to the internal iliac vein. **V., semiaz'ygous,** see *Azygous.* **V., spermat'ic,** see *Spermatic veins.* **V., sphenopal'atine,** a tributary of the pharyngeal vein. **V., spi'nal,** a generic term for the numerous venous plexuses situate upon and within the spine, including those on the exterior, the *dorsispinal* veins; those in the interior of the spinal canal, *meningorhachidian* veins; the veins of the body of the vertebræ, *venæ vasis vertebrarum;* and the veins of the spinal cord, *medullispinal* veins. **V., splen'ic,** see *Splenic.* **V., stylomas'toid,** a branch of the posterior auricular vein. **V., subcla'vian,** see *Subclavian.* **V., sublob'ular,** veins of the liver in which the intralobular veins terminate. By their union the sublobular veins form the hepatic veins. **V., submax'illary,** a branch of the facial vein commencing in the submaxillary gland. **V., submen'tal,** a branch of the facial vein below the jaw. **V., superfic'ial,** subcutaneous veins between the layers of the superficial fascia. **V., supe'rior intercos'tal, left,** see *Azygous.* **V., suprahepat'ic,** hepatic veins. **V., supra-orb'ital,** commencing on the forehead, it joins the frontal to form the angular vein. **V., suprare'nal,** a branch of the inferior vena cava on the right side, and on the left side terminating in the left renal or phrenic vein. **V., suprascap'ular,** a tributary of the external jugular near its termination. **V., su'ral,** veins from the gastrocnemius muscle to the popliteal vein. **V., system'ic,** veins which return the venous blood from almost all parts of the body to the right auricle of the heart; see *Vein.* **V., tem'poral,** vein commencing by a small plexus on the side and vertex of the skull; after being joined by the middle temporal it enters the parotid gland and unites with the internal maxillary to form the temporomaxillary. **V., temporomax'illary,** formed as just stated, dividing into two branches. **V., thy'roid, infe'rior,** see *Thyroideal.* **V., t., mid'dle,** returns the blood from the lower portion of the lateral lobe of the thyroid gland and terminates in the internal jugular. **V., t., supe'rior,** see *Thyroideal.* **V., tib'ial, ante'rior,** formed by venæ comites of the dorsalis pedis artery, and uniting with the posterior tibial to form the popliteal vein. **V., t., poste'rior,** veins communicating with the internal saphenous vein in the leg; see *V., anterior tibial.* **V., tibiomalle'olar,** saphena, great. **V., trans'verse cer'vical,** a tributary of the external jugular near its termination. **V., t. fa'cial,** a large vein, tributary to the temporal vein, from the side of the face. **V., ul'nar, ante'rior,** ascends along the inner side of the forearm, uniting at the bend of the elbow with the posterior ulnar to form the common ulnar vein. **V., u., deep,** vein from the ulnar side of the hand, uniting at the elbow with the deep radial veins to form the venæ comites of the brachial artery. **V., u., poste'rior,** vein chiefly from the ulnar side of the hand, passing along the posterior surface of the ulnar side of the forearm, uniting below the elbow with the anterior ulnar to form the common ulnar or with the median basilic to form the

basilic. **V., umbil'ical**, see *Umbilical vessels* and *Fœtal circulation*. **V., vagi'nal, of liver**, veins corresponding with the vaginal branches of the hepatic artery. **V., var'icose**, varix. **V., va'sa bre'via**, see *Brevia*. **V., ver'tebral**, vein accompanying vertebral artery, terminating at the root of the neck in the innominate vein. **V., Vid'ian**, a tributary to the pharyngeal vein.

Vein'stone. Phlebolite.

Velamen (vel-ah'men) **nati'vum** (native covering). Integument. **V. vul'væ**, see *Ventrale cutaneum*.

Velamenta (pl. of **Velamentum**, covering) **bombycina**, vel-ah-men'tah bom-bis'in-ah. Villous membranes. **V. cerebra'lia**, meninges. **V. infan'tis**, membranes of the fœtus.

Velamentous, vel-ah-men'tus. Resembling a veil.

Velamentum abdominale, vel-ah-men'tum ab-dom-in-al'e (abdominal covering). Peritoneum. **V. cor'poris commu'ne**, integument. **V. lin'guæ**, glossoepiglottic ligament. **V. nati'vum**, integument.

Veldt sore. See *Boil, Natal*.

Vellarina, vel-lah-re'nah (*vellarai*, native name of this E. Indian plant). Pale yellow oil from the Hydrocotyle Asiatica. It has a reputation in the treatment of leprous affections.

Vellarine, vel'lar-een. Vellarina.

Vellication, vel-le-ka'shun (*vellico*, to twitch). Twitching of muscles, as in tic.

Velosynthesis, vel-o-sin'thes-is (*velum*, *sunthesis*, putting together). Staphylorrhaphy.

Velpeau's band'age. See *Bandage*. **V's her'nia**, crural hernia anterior to the blood-vessels.

Ve'lum (veil or cover). Velum pendulum palati. **V. apoph'ysi vermifor'mi obten'tum**, valvula Vieussenii. **V. interjec'tum cerebel'li**, valvula Vieussenii. **V. interpos'itum**, a vascular membrane reflected from the pia mater into the interior of the brain through the transverse fissure. It separates the under surface of the body of the fornix from the cavity of the third ventricle. **V. medulla're anti'cum**, valvula Vieussenii. **V. medulla're infe'rius**, the medullary band or strip by which the cerebellum communicates with the medulla. **V. medulla're poste'rius** or **posti'cus**, or **semilu'nare**, the small posterior valve of the cerebellum, a thin medullary plate between the medulla oblongata and vermis inferior, in front of the nodulus. **V. pala'ti** or **palati'num**, velum pendulum palati. **V. pen'dulum pala'ti**, pendulous veil of the palate, *Soft palate*, a movable, soft, and broad septum attached to the posterior extremity of the palatine arch, and separating the mouth from the pharynx. Its form is nearly quadrilateral. Its anterior surface corresponds to the mouth, the posterior to the pharynx. Its superior edge is fixed to the palatine arch; the inferior is free, floating, and has an appendix at its middle—the uvula. The lateral margins of the velum are held down by two folds, the pillars, separated from each other by a triangular space; the anterior passes to the base of the tongue, the posterior to the sides of the pharynx. The velum palati is formed of a mucous coat which contains numerous follicles, and of a muscular stratum. **V. plex'ibus choroï'deis interpos'itum**, velum interpositum. **V. pupil'læ**, pupillary membrane. **V. staphyli'num**, velum pendulum palati. **V. Tari'ni**, velum medullare posterius. **V. triangula're**, tela choroïdea superior. **V. vesi'cæ urina'riæ**, trigonum of bladder. **V. Vieusse'nii**, valvula Vieussenii.

Vel'vet leaf. Abutilon avicennæ; pareira.

Vena, ve'nah. Vein; penis. **V. accesso'ria**, left upper azygos vein. **V. al'ba re'num**, ureter. **V. al'ba thora'cis**, thoracic duct. **V. anastomot'ica mag'na**, anastomotic vein of Trolard. **V. angula'ris**, angular vein. **V. an'guli o'ris**, branch to facial vein from angle of mouth. **V. anon'yma brachiocephal'ica**, innominate vein. **V. anon'yma ili'aca**, common iliac vein. **V. ante'rior cer'ebri**, anastomotic vein of Trolard. **V. apoplec'tica**, internal jugular vein. **V. aquæduc'tûs coch'leæ** or **a. vestib'uli**, auditory veins. **V. arterio'sa**, pulmonary artery; vena porta. **V. ascen'dens**, basilar vein. **V. axilla'ris**, axillary vein. **V. az'ygos**, right azygos vein. **V. a. accesso'ria**, left upper azygos vein. **V. a. cerebel'li poste'rior**, vein on inferior vermiform process. **V. a. cona'rii**, small vein passing from region of pineal gland to empty into internal cerebral vein. **V. a. lumba'ris**, ascending lumbar vein. **V. a. mag'na** or **ma'jor**, right azygos vein. **V. a. mi'nor** or **par'va** or **sinis'tra**, left lower azygos vein. **V. basila'ris**, basilar vein. **V. basil'ica**, basilic vein. **V. b. antibra'chii**, superficial ulnar vein. **V. capita'lis bra'chii**, main venous trunk of arm in the fœtus. **V. cap'itis**, cephalic vein. **V. caro'tis exter'na**, temporomaxillary vein. **V. car'pea commu'nicans dorsa'lis**, anastomotic branch between deep veins of back of hand and vein of fourth metacarpal space. **V. ca'va**, see *Cava*. **V. c. abdomina'lis** or **ascen'dens**, vena cava inferior. **V. c. descen'dens**, vena cava superior. **V. c. infe'rior**, see *Cava vena*. **V. c. supe'rior sinis'tra**, vessel in the fœtus corresponding to the right descending vena cava. **V. c. thorac'ica**, superior vena cava. **V. centra'lis**, trunk into which the minute veins of the suprarenal capsule empty. **V. centra'lis ret'inæ**, vein receiving blood from the retina, passing from the eyeball through the centre of the optic disk, and emptying into the cavernous or ophthalmic vein. **V. cephal'ica**, cephalic vein. **V. c. ante'rior**, common facial vein. **V. c. antibra'chii**, superficial radial vein. **V. c. ascen'dens**, the cephalic vein in the fœtus. **V. c. commu'nis**, common jugular vein. **V. c. descen'dens**, a branch in fœtal life passing over the clavicle to unite with the cephalic vein. **V. c. exter'na**, common facial vein. **V. c. hu'meri**, cephalic vein. **V. c. inter'na**, internal jugular vein. **V. c. pol'licis**, vein from thumb and index finger and back of hand, emptying into radial vein. **V. c. poste'rior**, internal jugular vein. **V. cerebra'lis infe'rior ante'rior**, basilar vein. **V. cer'ebri ascen'dens**, basilar vein. **V. c. inter'na commu'nis**, vena magna Galeni. **V. c. inter'na ma'jor**, vein of Galen. **V. c. mag'na**, vena magna Galeni. **V. c. me'dia**, vena fossæ Sylvii. **V. c. poste'rior infe'rior**, branch to veins of Galen from posterior part of the hemispheres. **V. cervica'lis profun'da**, deep cervical vein. **V. c. superficia'lis**, posterior external jugular vein. **V. choroï'dea**, choroid vein. **V. col'ica sinis'tra**, inferior mesenteric vein. **V. com'itans hypoglos'si**, sublingual vein. **V. commu'nicans cephal'ica pol'licis**, an anastomotic branch between the vena cephalica pollicis and deep palmar venous arch. **V. c. mag'na**, anastomotic vein of Trolard. **V. c. obturato'ria**, branch from dorsal vein of penis to obturator vein. **V. c. ulna'ris**, anastomotic branch between superficial ulnar vein and deep palmar venous arch. **V. cona'rii**, branch from pineal gland to veins of Galen. **V. cor'dis Gale'ni**, middle cardiac vein. **V. cor'nu**, vein from pudendal plexus, emptying into internal iliac. **V. corona'ria cor'dis mi'nor** or **poste'rior**, middle cardiac vein. **V. c. u'teri**, trunk formed upon the pregnant uterus by enlarged branches of uterine and vaginal plexuses. **V. c. ventric'uli infe'rior**, vena gastroepiploica dextra. **V. cor'poris stria'ti**, one of two veins forming the venæ Galeni or deep cerebral veins. **V. costa'lis supre'ma**, superior intercostal vein. **V. cubita'lis cuta'nea**, basilic vein. **V. cu'biti inte'rior**, basilic vein. **V. cuta'nea cervi'cis mag'na**, posterior external jugular vein. **V. c. col'li ante'rior**, anterior jugular vein. **V. c. col'li infe'rior**, arcus venosus juguli. **V. c. col'li ma'jor** or **poste'rior**, external jugular vein. **V. c. exter'na**, cephalic vein; radial vein. **V. c. fron'tis mag'na**, frontal veins. **V. c. inter'na**, superficial ulnar vein. **V. c. inter'na bra'chii**, basilic vein. **V. c. media'na**, median vein. **V. c. radia'lis**, radial vein. **V. c. radia'lis bra'chii**, cephalic vein. **V. c. ulna'ris**, ulnar vein. **V. c. ulna'ris bra'chii**, basilic vein. **V. demi-az'ygos**, see *Azygos*. **V. diploët'ica**, see *Diploic*. **V. epigas'trica infe'rior tegumento'sa**, subcutaneous vein from umbilical and hypogastric regions, emptying into femoral vein. **V. facia'lis ante'rior**, facial vein. **V. f. commu'nis**, common facial vein. **V. f.**

cuta'nea commu'nis, facial vein. **V. f. exter'na**, temporomaxillary vein. **V. f. inter'na**, facial vein. **V. f. poste'rior**, temporomaxillary vein. **V. falcifor'mis**, inferior longitudinal sinus. **V. fal'cis cer'ebri**, sinus longitudinalis inferior. **V. fos'sæ Syl'vii**, vein from anterior perforated space, emptying into anterior end of cavernous sinus. **V. Gale'ni**, see *Cardiac veins* and *Choroideæ venæ*. **V. gastroliena'lis**, splenic vein. **V. hemiaz'ygos**, left lower azygos vein; see *Azygos*. **V. hemiaz'ygos accesso'ria**, left upper azygos vein. **V. hepat'ica**, right basilic vein. **V. hypogas'trica**, internal iliac vein. **V. ili'aca primiti'va**, common iliac vein. **V. il'iolumba'lis**, vein with similar distribution to iliolumbar artery, emptying into internal iliac vein. **V. intercosta'lis supre'ma**, superior intercostal vein. **V. inter'na**, vertebral vein. **V. interventricula'ris posti'ca**, middle cardiac vein. **V. jugula'ris ante'rior exter'na**, anterior jugular vein. **V. j. ante'rior horizonta'lis**, arcus venosus juguli. **V. j. cephal'ica**, internal jugular vein. **V. j. cerebra'lis**, internal jugular vein. **V. j. exter'na ante'rior**, arcus venosus juguli. **V. j. exter'na poste'rior**, external jugular vein. **V. j. transversa'lis ante'rior**, arcus venosus juguli. **V. labia'lis me'dia**, vena anguli oris. **V. lac'tea**, porta vena. **V. latera'lis**, vertebral vein. **V. liena'lis**, splenic vein. **V. lumba'ris ascen'dens** or **lum'bo-costa'lis**, ascending lumbar vein. **V. macula'ris**, vein of retina from macula lutea, emptying into vena centralis retinæ. **V. mag'na**, porta vena. **V. mag'na cor'dis**, coronary vein of heart. **V. m. Gale'ni**, see *Galen, veins of*. **V. maxilla'ris inter'na ante'rior**, deep facial vein. **V. m. inter'na poste'rior**, internal maxillary vein. **V. media'na**, vein or veins from medial side of retina, emptying into vena centralis retinæ. **V. m. antibra'chia**, median vein. **V. m. basil'ica**, median basilic vein. **V. m. cephal'ica**, median cephalic vein. **V. m. col'li**, anterior jugular vein. **V. m. commu'nis**, median vein. **V. m. xiphoï'dea tegumento'sa**, subcutaneous vein from umbilical region to vena transversa xiphoïdea. **V. medi'na Ar'abum** or **medinen'sis**, dracunculus. **V. mesenter'ica mag'na**, superior mesenteric vein. **V. m. mi'nor** or **par'va**, inferior mesenteric vein. **V. metacar'pea ulna'ris**, vein from venæ intercapitulares along radial border of hand. **V. nasa'lis**, branch from nasal side of retina, emptying into vena papillaris inferior. **V. n. supe'rior**, branch from nasal side of retina, emptying into vena papillaris superior. **V. ner'vi hypoglos'si**, sublingual vein. **V. obli'qua auricula'ris**, oblique vein of heart. **V. ophthal'mica cerebra'lis**, superior ophthalmic vein. **V. o. exter'na** or **facia'lis**, inferior ophthalmic vein. **V. o. inter'na**, internal ophthalmic vein. **V. ophthalmomeninge'a**, vein from vicinity of fissure of Sylvius to sphenoparietal sinus or ophthalmic vein. **V. ostia'ria**, vena porta. **V. papilla'ris**, branch or branches to vena centralis retinæ from optic disk. **V. pa'ri ca'rens**, azygos vein. **V. parumbilica'lis xiphoï'dea**, anastomotic branch from greater parumbilical vein to left superior epigastric vein. **V. petro'sa infe'rior**, inner portion of inferior petrosal sinus. **V. por'ta, por'tæ, porta'lis, porta'rum**, or **ad por'tas**, portal vein. **V. poste'rior at'rii sinis'tri**, oblique vein of heart. **V. præpara'ta**, frontal vein. **V. profun'da**, vertebral vein. **V. puden'do-glutæ'a**, vein from pudendal plexus, receiving sciatic and gluteal veins and emptying into internal iliac. **V. pulmona'lis dex'tra me'dia**, supplementary pulmonary artery sometimes observed. **V. rama'lis**, vena porta. **V. rani'na**, sublingual vein. **V. reflex'a**, vein of corpus striatum. **V. Rosenthal'ii**, basilar vein. **V. salvatel'la**, annular vein; vein of little finger over fourth metacarpal space. **V. saphe'na mag'na**, long saphenous vein. **V. sem'ino-uretrosacra'lis**, from pudendal plexus, emptying into internal iliac. **V. si'ne com'ite** or **si'ne pa're**, azygos vein. **V. splen'ica**, left basilic vein; splenic vein. **V. stelechiæ'a**, vena porta. **V. subala'ris**, vena axillaris. **V. subcuta'nea col'li ante'rior**, anterior jugular vein. **V. s. c. poste'rior**, posterior external jugular vein. **V. sul'ci centra'lis**, posterior superior cerebral vein in the central sulcus. **V. superficia'lis col'li ante'rior**, anterior jugular vein. **V. tempora'lis commu'nis**, temporo-maxillary vein. **V. t. infe'rior**, branch to vena papillaris inferior from temporal side of retina. **V. termina'lis**, vein of corpus striatum; circulus venosus. **V. thorac'ico-epigas'trica lon'ga tegumento'sa**, anastomotic vein from vena circumflexa ilii tegumentosa and long thoracic vein. **V. thyroï'dea i'ma**, inferior thyroid vein. **V. thy'ro-larynge'a**, superior thyroid vein. **V. transver'sa xiphoï'dea**, subcutaneous vein connecting opposite internal mammary veins. **V. vela'ta**, vein of corpus striatum. **V. vertebra'lis exter'na**, deep cervical vein. **V. v. e. ante'rior**, anterior vertebral vein. **V. v. poste'rior**, deep cervical vein. **V. v. superficia'lis**, deep cervical vein. **V. zygomat'ico-orbita'lis**, orbital vein.

Ven'æ (pl. of **Vena**). Veins. **V. advehen'tes**, small veins in the fœtus carrying blood into the liver from the ductus venosus. **V. a. capsula'res**, branches to portal vein from capsule of liver. **V. ala'res na'rium**, lateral nasal veins. **V. anastomot'icæ mag'næ ca'vi cra'nii** or **cer'ebri**, veins of the pia mater, forming communication between the superior longitudinal sinus and sinuses at base of brain: the anterior passing to the superior petrosal sinus; posterior, to the lateral sinus. **V. anon'ymæ**, innominate veins. **V. apoplec'ticæ**, jugular veins. **V. atrabilia'riæ**, suprarenal veins. **V. auditi'væ inter'næ**, auditory veins. **V. auricula'res**, auricular veins. **V. ba'sis vertebra'rum** or **basivertebra'les**, veins in canals of the bodies of the vertebræ emptying into the meningorachidian veins. **V. bul'bo-urethra'les**, veins from bulb of urethra emptying into pudendal plexus. **V. calca'neæ**, branches from region of heel emptying into posterior tibial veins. **V. capsula'res**, suprarenal veins. **V. cauda'les**, medial sacral vein. **V. cav'æ hep'atis**, hepatic veins. **V. caverno'sæ**, veins from corpora cavernosa and spongiosa of penis, emptying into pudendal plexus. **V. centra'les**, intralobular veins. **V. cerebel'li**, cerebellar veins. **V. cer'ebri inter'næ** or **profun'dæ**, veins of Galen. **V. cilia'res posti'cæ**, venæ vorticosæ. **V. circumflex'æ il'ii tegumento'sæ**, veins accompanying external circumflex iliac arteries, emptying into femoral or epigastric vein. **V. circumflex'æ pe'nis**, veins from corpus cavernosum on under surface of penis, emptying into the dorsal vein. **V. comitan'tes**, small veins accompanying the femoral and popliteal arteries. **V. com'ites** or **concom'ites**, veins accompanying arteries; see *Vein*. **V. cor'dis**, cardiac veins. **V. c. min'imæ**, veins of Thebesius. **V. corona'riæ cor'dis**, coronary veins of heart. **V. costa'les**, intercostal veins. **V. diaphragmat'icæ inferio'res**, phrenic veins. **V. diploet'icæ** or **diplo'icæ**, diploic veins. **V. dorsa'les na'si**, nasal veins. **V. d. pe'dis**, first and fourth metacarpal veins of back of foot. **V. emulgen'tes**, renal veins. **V. Gale'ni**, choroid veins. **V. gas'tricæ bre'ves**, short branches from fundus of stomach, discharging into splenic vein. **V. glandulo'sæ**, submaxillary veins. **V. hepat'icæ advehen'tes**, branches of omphalomesenteric vein to the liver. **V. h. revehen'tes**, branches of omphalomesenteric vein from liver. **V. inguina'les**, veins from groin, emptying into internal saphenous vein. **V. innomina'tæ**, innominate veins. **V. intercapitula'res**, anastomotic branches from palm of hand in the interdigital spaces. **V. interlobula'res**, interlobular veins. **V. intralobula'res**, intralobular veins. **V. lac'teæ**, chyliferous vessels. **V. lumba'les transver'sæ**, lumbar veins. **V. lymphat'icæ**, lymphatic vessels. **V. mag'næ spi'næ longitudina'les**, meningorachidian veins. **V. mamma'riæ tegumento'sæ**, external mammary veins. **V. medul'læ spina'lis**, medullispinal veins. **V. mesera'icæ**, mesenteric veins. **V. mican'tes**, see *Artery*. **V. min'imæ cor'dis**, see *Foramina Thebesii*. **V. os'sium cra'nii**, diploic veins. **V. pinna'les**, lateral nasal veins. **V. pulmona'res**, pulmonary veins. **V. pulsat'iles**, see *Artery*. **V. rec'tæ**, veins from papillæ of kidney between the tubes to the venæ renales. **V. rena'les**, renal veins. **V. re-**

vehen'tes, venæ hepaticæ revehentes. **V. satel'lites arteria'rum**, venæ comites. **V. sopora'les**, jugular veins. **V. spermat'icæ**, spermatic veins. **V. sphagit'ides**, jugular veins. **V. spina'les exter'næ posterio'res**, dorsispinal veins. **V. s. pro'priæ**, medullispinal veins. **V. stella'tæ** or **stellula'tæ**, stellate veins. **V. sublobula'res**, sublobular veins. **V. Thebe'sii**, see *Foramina Thebesii*. **V. thym'icæ**, thymic veins. **V. transver'sæ scap'ulæ**, suprascapular veins. **V. ver'tebro-lumba'res**, lumbar veins. **V. Vieussen'ii**, smallest cardiac veins. **V. vortico'sæ**, vasa vorticosa.

Venæsectio, ven-e-sek'she-o (*vena*, vein, *seco*, *sectum*, to cut). See *Bloodletting*. **V. revulso'ria**, see *Bloodletting*.

Venal, ve'nal. Venous.

Veneficium, ven-e-fish'e-um (*venenum*, poison, *facio*, to make). Poisoning.

Venenation, ven-en-a'shun (*venenum*, poison). Poison; poisoning; venom.

Venenatus (ven-en-at'us) or **Venenose**, ven'en-oze. Venomous.

Venenum, ven-a'num. Poison; venom.

Venereal, ven-e're-al (*Venus*, the goddess of pleasure). That which relates to the pleasures of love. In a more restricted sense the word venereal—as well as aphroditic—is synonymous with syphilitic and also with syphilis. Also aphrodisiac, or adapted to excite venereal desire. See *Syphilis*. **V. disease**, syphilis. **V. wart**, condyloma; verruca.

Venerivagus, ven-er-iv'ag-us (*Venus*, *vago*, to wander). Libidinous.

Venery, ven'er-e (*Venus*). The pleasures of love; sexual communication; coition.

Venesection, ven-e-sek'shun (*vena*, *seco*, to cut). See *Bloodletting*.

Ven'ice tur'pentine. See *Pinus larix*.

Ven'om. *Venenation*. Poisonous fluid secreted by certain animals, as the viper, in a state of health, and which they preserve in a particular reservoir to use as a means of attack or defence. It differs, according to some, from virus, as the latter is always the result of a morbid process, which may be produced by the individuals who receive it in their turn, and be transmitted to others. **V., quick'ening**, sperm. **V., vital**, sperm.

Venomous, ven'om-us. *Venenose*. An epithet applied to animals which have a secretion of venom, as the viper, rattlesnake, etc., as well as to the venom itself; and also to liquids in the animal body, so perverted by previous disease that their contact occasions serious mischief in sound individuals, as happens in hydrophobia. Virus is more commonly used in this case.

Venositas, ven-os'it-as (*vena*, vein). Venosity. **V. san'guinis**, predominance of the venous system.

Venosity, ve-nos'it-e. *Venousness*, *Venous state* or *cachexia*. Condition in which, it has been supposed, the blood is moved slowly, is more venous, and the venous blood itself in greater quantity—a state chiefly observed in hemorrhoids, gout, hypochondriasis, etc. In general it signifies abundance of veins in a part; afflux of blood into the veins.

Venous, ve'nus (*vena*, vein). *Venal*. Appertaining to a vein or to the blood of the veins, as venous cachexia, venous pulse, etc. **V. cachex'ia**, venosity. **V. hum**, bruit de diable. **V. næ'vus**, nævus vascularis. **V. pulsa'tion** or **pulse**, pulsus venarum. **V. state**, venosity. **V. sys'tem**, see *Vascular*. **V. sys'tem, abdom'inal**, porta vena. **V. sys'tem of Ja'cobson**, a system of vessels in the three classes of vertebrated animals other than the mammalia, which forms a communication between the vena porta and the vena cava.

Venousness, ve'nus-ness. Venosity.

Venter, ven'tur. *Abdomen*, *Belly*, *Uterus*. In law, venter designates the maternal parentage of children. Thus, if A were B's child by his first wife, he would be described in law as "by the first *venter*." In anatomy, broad surface of a muscle or a bone, as venter of the ilium. **V. of il'ium**, iliac fossa. **V. i'mus** (lowest belly), abdomen, hypogastrium. **V. infe'rius**, abdomen. **V. in'fimus**, abdomen. **V. of the kid'ney**, the pelvis of the kidney. **V. mag'nus**, ingluvies. **V. me'dius**, thorax. **V. mus'culi**, see *Muscle*. **V. par'vus**, hypogastrium. **V. propen'dens**, anterior obliquity of the uterus. **V. re'num**, pelvis of the kidney. **V. supre'mus**, cavity of the cranium.

Ventilation, ven-til-a'shun (*ventilo*, to fan, from *ventus*, wind). The act of renewing the air of vessels, hospitals, and apartments or of situations where many people are collected together. The utility of such renewal must be evident when it is considered that atmospheric air loses its oxygen during respiration, and carbonic acid supplies its place. Stagnant air also becomes loaded with numerous impurities, and where numbers are crowded together a large amount of zymotic or fermentable matter is exhaled from the lungs and taken in again during respiration. This is, indeed, a great cause of the mortality which occurs in camps and cities, and hence one of the greatest hygienic improvements of modern times has been a proper attention to circulation of air in hospitals and similar establishments. Instruments used for the purpose of renewing the air in ships, apartments, etc. have been called *ventilators*.

Ventosity, ven-tos'it-e (*ventus*, wind). Flatulence.

Ven'tral (*venter*, belly). Abdominal. **V. her'nia**, direct hernia occurring in any part of the abdomen, most frequently found between the recti muscles. When the hernia takes place below the xiphoid cartilage it is called epigastric hernia; when in the loins, lumbar hernia.

Ventrale, ven-tral'e (belly-band). Belt (Russian). **V. cuta'neum**, cutaneous apron. An elongation of the nymphæ in the Bosjesman female, which hangs down before the vulva like an apron.

Ventre inspiciendo (ven'tre in-spis-e-en'do), **de.** See *De ventre inspiciendo*.

Ventricle, ven'trik'l (dim. of **Venter**, belly). Literally, a little belly. A name given, in anatomy, to various parts. **V. of Aran'tius**, *V.* or *Cavity of Aranzi*. A small cavity, lined with gray substance, at the point of the calamus scriptorius. **V. of cerebel'lum**, see *Ventricles of the brain*. **V. of cor'pus callo'sum**, sulcus corporis callosi, the space intervening between the labium cerebri and corpus callosum. **V., fifth**, see *Ventricles of the brain*. **V., fourth**, see *Ventricles of the brain*. **V., pul'monary**, V., right. **V. of the sep'tum**, see *Ventricles of the brain*. **V., Syl'vian**, see *Ventricles of the brain*. **V., third**, see *Ventricles of the brain*.

Ventricles of the brain. Five cavities in the interior of that organ, which are distinguished as the lateral ventricles, middle ventricle, fourth ventricle or ventricle of the cerebellum, and fifth ventricle. The middle ventricle or third ventricle is situate in front of the pineal gland. It communicates with the lateral ventricles by two openings situate behind the anterior pillar or crus of the fornix. The lateral ventricles are two in number. They are large, and, owing to their considerable curvature, occupy a great part of the cerebral centre. Internally they are separated from each other by the septum of the ventricles—a medullary plate given off from the lower part of the corpus callosum. The lateral ventricles have, in their upper and anterior portion, the corpora striata, thalami optici, and tænia semicircularis; their inferior portion contains the corpus fimbriatum, cornu ammonis, etc. The fourth ventricle is situate beneath the aqueduct of Sylvius, by which it communicates with the third ventricle. It extends from this aqueduct to the upper part of the medulla, and is seated in the substance of the tuber annulare. The fifth ventricle, *Ventricle of the septum*, *Sylvian ventricle*, is the small serous cavity between the laminæ of the septum lucidum; called, also, *Sinus of the septum lucidum*, *S. of the median septum*. **V. of the heart**, these are two in number. The *Right* or *Pulmonary Ventricle* is situate at the fore part of the heart, the base and apex corresponding to those of the heart. In it are seen the columnæ carneæ and chordæ tendineæ. The

right ventricle communicates with the right auricle by the ostium venosum, and from it the pulmonary artery arises. Around the auricular orifice is a tendinous margin or ring from which the tricuspid valve is given off. The use of the ventricle is to send the blood, by its contraction, along the pulmonary artery to the lungs. The *Left Ventricle* is situate at the posterior and left part of the heart. Its parietes are thrice thicker and stronger than those of the right, owing to its having to send the blood over the whole system. The inner surface has the same general appearance as that of the right. The columnæ carneæ and chordæ tendineæ are, however, much stronger. It communicates with the left auricle by means of the mitral valve, and from it proceeds the largest blood-vessel of the body—the aorta. **V. of the lar'ynx,** *Sinuses of the larynx;* these are two depressions in the larynx, comprised between the superior and inferior ligaments. **V., lat'eral,** see *Ventricles of the brain.* **V., left,** see *Ventricles of the heart.* **V., mid'dle,** see *Ventricles of the brain.* **V., pul'monary,** see *Ventricles of the heart.* **V., right,** see *Ventricles of the heart.*

Ventricose, ven'trik-ose. Abdominous.

Ventricous, ven'trik-us. *Ventricose.* Bellied. Having a large belly. See *Abdominous.*

Ventricular, ven-trik'u-lar. Relating to a ventricle. **V. aq'ueduct,** see *Aquæductus Sylvii.* **V. band,** chorda vocalis spuria. **V. sep'tum,** septum cordis; also septum lucidum.

Ventriculi (ven-trik'u-le) (pl. of **Ventriculus**) **anterio'res.** Ventricles, lateral. **V. cer'ebri,** ventricles of the brain. **V. cor'dis,** ventricles of the heart. **V. dilata'tio,** dilatation of the stomach. **V. dissolu'tio,** softening of the stomach. **V. du'ræ ma'tris,** sinuses of the dura mater. **V. emollit'io,** softening of the stomach. **V. exulcera'tio,** ulceration of the stomach. **V. flux'us,** gastrorrhœa. **V. inflamma'tio,** gastritis. **V. larynge'i,** ventricles of the larnyx. **V. latera'les,** see *Ventricles, lateral, of the brain.* **V. mag'ni,** ventricles, lateral, of the brain. **V. majo'res,** ventricles, lateral. **V. metamorpho'sis gelatinifor'mis,** softening of the stomach. **V. Morgagn'ii,** ventricles of the larynx. **V. perfora'tio,** perforation of the stomach. **V. prio'res,** ventricles, lateral. **V. pseudophlogo'sis resoluti'va et colliquati'va,** softening of the stomach. **V. superio'res,** ventricles, lateral. **V. tricor'nes,** ventricles, lateral. **V. ulcera'tio,** ulceration of the stomach.

Ventriculus, ven-trik'u-lus (dim. of **Venter,** belly). Stomach; ventricle. **V. ante'rior,** right ventricle. **V. aor'ticus,** left ventricle. **V. Aran'tii,** see *Ventricles of the brain.* **V. bul'bi olfacto'rii,** ventricle, olfactory. **V. bulbo'sus,** V. callosus. **V. callo'sus** (callous stomach), the gizzard or third stomach of the gallinaceous birds, consisting of a double-bellied or digastric muscle. It is lined by a firm cuticle, and forms a kind of pouch, depending from the alimentary tube, in which the second stomach terminates, and from which the duodenum or ventriculus succenturiatus issues. In the interior of the gizzard numerous pebbles may be found which aid in the trituration of the food. The gizzard is an organ of mastication, and is possessed of great muscular power. **V. cerebel'li,** see *Ventricles of the brain.* **V. cona'rii,** ventricle, pineal. **V. cor'poris callo'si,** sulcus of corpus callosum. **V. Gale'ni,** ventricle of the larynx. **V. interme'dius,** third ventricle. **V. intestina'lis,** abomasus. **V. latera'lis,** ventricle, lateral. **V. mag'nus,** ventricle, lateral, of brain. **V. me'dius,** ventricle, third. **V. Morgagn'ii,** ventricle of larynx. **V. olfacto'rius,** cavity existing during fœtal life in olfactory bulb, which closes after birth. **V. perfora'tus,** perforation of the stomach. **V. poste'rior,** ventricle, left. **V. pri'mus,** ventricle, right. **V. pulmona'lis,** ventricle, right. **V. quar'tus,** see *Ventricles of the brain.* **V. secun'dus,** ventricle, left. **V. sep'ti pellu'cidi,** see *Ventricles of the brain.* **V. succenturia'tus,** duodenum; see *Ventriculus callosus.* **V. termina'lis,** ventricle, terminal. **V. tricor'nis cer'ebri,** lateral ventricle of brain. **V. Ver'gæ,** Verga's ventricle.

Ventricus, ven'trik-us. Abdominous.

Ventrilocution, ven-tril-o-ku'shun. See *Engastrimyth.*

Ventriloquism, ven-tril'o-kwism. See *Engastrimyth.*

Ventriloquist, ven-tril'o-kwist. Engastrimyth.

Ventriloquy, ven-tril'o-kwe. See *Engastrimyth.*

Ventriosus, ven-tre-o'sus. Abdominous.

Ventripotent, ven-trip'o-tent (*venter, potens,* powerful). Abdominous.

Ventripyramid, ven-tre-pir'am-id. Anterior pyramid situate in the medulla oblongata.

Ventrofixation, ven-tro-fiks-a'shun. Operation consisting in laparotomy, breaking up adhesions of the uterus, bringing forward the fundus, and suturing it to the anterior abdominal wall with catgut or other appropriate suture.

Ventro-inguinal, ven'tro-in'gwin-al (*venter,* belly, *inguen,* groin). Relating or appertaining to the abdomen and groin, as *ventro-inguinal* hernia. See *Hernia* (inguinal).

Ventrose, ven'troze. Abdominous; having a swollen belly.

Ventrositas, ven-tros'it-as (*venter*). Excessive corpulency; large abdominal tumor that is neither fluctuating nor sonorous.

Ventrotomy, ven-trot'o-me. Operation of opening the abdominal cavity by incision.

Ven'tus. Wind.

Venula, ven'u-lah (dim. of **Vena**). Small vein; arteria (Hippocrates). See *Vein.*

Venulæ centrales, ven'u-le sen-tral'ees. Intralobular veins. **V. intralobula'res,** intralobular veins.

Ve'nus (the goddess of love). Clitoris; coition; cuprum; venery. **V., crys'tals of,** cupri subacetas. **V.'s fly-catcher,** rhizoma of Sarracenia flava.

Veratralbine, ver-ah-tral'been. $C_{28}H_{43}NO_5$. Very powerful alkaloid contained in Veratrum album.

Verat'ria. Veratrina.

Veratric (ver-at'rik) **acid.** An acid derived from veratrine by the process of saponification.

Veratrina, ver-at-re'nah. *Veratrine.* A vegetable alkali found in the seeds of Veratrum sabadilla, V. officinale, Helonias officinalis, and Asagræa officinalis, known in commerce under the names cebadilla, cevadilla, and sebadilla, and imported from Mexico. Veratrina (Ph. U. S.) is an alkaloid or mixture of alkaloids prepared from the seeds of Asagræa officinalis. Veratrine is solid, white, pulverulent, and inodorous; soluble in water and in alcohol. When prepared in the usual manner it still contains other substances—*Sabadillin, Viridia, Veratroidia, Veratroidine,* gum resin of the sabadilla, and black greasy matter. It is extremely poisonous, and but little used internally in medicine; dose, gr. $\frac{1}{50}$–$\frac{1}{20}$. It is applied in friction, or endermically (from gr. v to xx to ʒj of lard or cerate) in various neuralgic affections. There is also an Oleum veratrinæ for local use, consisting of 2 parts veratrine and 98 parts oleic acid; see *Oleate.* The two alkaloids, *Viridia* and *Veratroidia,* which are obtained from veratria, are depressants of the circulation. Viridia produces death, however, by paralysis of the respiratory nervous system; veratroidia, by asphyxia.

Veratrine, ver'at-reen. Veratrina. **V. o'leate,** see *Veratrina* and *Oleate.* **V.** (or **Vera'tria**), **sul'phate of,** possesses the same virtues as veratrine. A solution of one grain in two ounces of distilled water has been used as a substitute for the *Eau médicinale d'Husson,* a well-known remedy, in the dose of fʒj to fʒij.

Veratrinum, ver-at-re'num. Veratrina.

Veratroïdia, ver-at-ro-id'e-ah. See *Veratrina.*

Veratroï'dine. See *Veratrina.*

Veratrum album, ver-at'rum al'bum (*vere atrum,* truly black, from the color of the roots). *Cherbachem, White hellebore.* Ord. Melanthaceæ (Lindley). The root or rhizome of this common European plant is indebted to the veratrine for its properties. It is violently emetic and purgative, even when applied to an ulcerated surface; it is also possessed of errhine properties, and acts externally as a stimulant. It is rarely exhibited internally. Sometimes it is

given as a sneezing-powder, but it operates with great violence. It also forms an itch-ointment. See *Unguentum veratriæ*. **V. lu'teum,** Chamælirium luteum. **V. sabadil'la,** *Cevadilla, Sevadilla;* the seeds—dried fruit—of this plant, cevadilla, sabadilla, have been used mostly as anthelmintics. It possesses the same general properties as the Veratrum album. Sabadilla (Ph. Br.) is the dried ripe seeds of Schœnocaulon officinale. Powdered sabadilla, under the name *poudre des Capuchins*, was formerly employed for destroying lice and vermin. **V. vir'ide,** *American* or *Green hellebore, Swamp hellebore, Indian poke, Indian uncas, Poke-weed, Bear-weed, Itch-weed, Tickle-weed, Earthgall, Devil-bit, Wolfbane, Puppet-weed,* is indigenous to the swampy districts of almost every part of the United States. The properties of the rhizome are like those of the genus. It has been employed, however, as a powerful sedative in inflammatory diseases. See *Extractum veratri viridis fluidum, Tinctura veratri viridis,* etc.

Ver'bal amne'sia. Amnesic aphasia. See *Aphasia.*

Verbasculum, vur-bas'ku-lum. Primula veris.

Verbascum alatum, vur-bas'kum al-at'um. V. thapsus. **V. al'bum,** V. thapsus. **V. colli'num,** V. thapsus. **V. crassifo'lium,** V. thapsus. **V. elonga'tum,** V. thapsus. **V. lychni'tis,** V. thapsus. **V. monta'num,** V. thapsus. **V. ni'grum,** *Black mullein,* and **V. thap'sus,** *Phlox, Great broad-leaved* or *yellow mullein, High taper, Cow's lungwort* (ord. Scrophulariaceæ), especially the latter, have been used as emollients, applied externally in the form of fomentation, the large leaves being chosen for this purpose. The mucilage which they contain has been extracted by decoction or infusion, and administered in pectoral affections. **V. sim'plex,** V. thapsus. **V. thapsoï'des,** see *V. nigrum.* **V. thap'sus,** see *V. nigrum.*

Verbena hastata, vur-be'nah has-tat'ah. *Blue vervain, Simpler's joy,* an American species, is more bitter than the European, and said to be emetic. **V. officina'lis,** *Vervain, Purvain, Juno's tears,* ord. Verbenaceæ; plant formerly held sacred, used in sacrifices and suspended around the neck as an amulet. **V. panicula'ta,** V. hastata. **V. triphyl'la,** herb whose aroma resembles a lemon; has stomachic and antispasmodic properties. **V. urticifo'lia,** an indigenous species, has been used in poisoning from Rhus toxicodendron.

Verbenaca, vur-ben'ak-ah. Verbena officinalis.

Verbesina acmella, vur-bes-e'nah ak-mel'lah. Spilanthus acmella. **V. Virgin'ica,** *Crown beard;* indigenous; ord. Compositæ. A decoction of the root is used by the Indians as a diaphoretic and depurative.

Verbigeration, vur-bij-ur-a'shun (*verbum,* word, *gero,* to carry). The frequent repetition of words which have no meaning or connection in continued order, as in a sentence.

Ver'det (F.) (*viridis,* green). Cupri subacetas; also a fungous parasitic disease of maize.

Ver'digris (*viridis,* green, *gris,* gray). Cupri subacetas.

Verenda, ver-en'dah (*vereor,* to reverence). Genital organs.

Veretrum, ver'et-rum. Penis; vulva.

Ver'ga's ven'tricle. Space resembling a cleft occasionally found between the medullary layer which serves as a connection between the columnæ fornicis and corpus callosum.

Verhey'en, stars of. Stellate veins.

Ver'ine. Compound produced by saponification of veratrine.

Verjuice, vur'juice (*verd,* green, *jus,* juice). Juice of green fruits; a sour kind of grape. Also an acid liquor prepared from very sour grapes or crab-apples. Principally used in culinary preparations, although occasionally an ingredient in medicinal compounds. See *Vitis vinifera.*

Vermale's amputa'tion. Amputation above the knee by lateral flaps.

Vermes, vur'mees (pl. of **Vermis**). Worms. **V. cer'ebri,** choroid plexus. **V. intesti'ni** or **intestina'les,** see *Worms.*

Vermicelli, ver-me-sel'le (I.) (L. *vermiculus,* dim. of **Vermis,** worm). See *Turundæ Italicæ.*

Vermicide, vur'me-side (*vermis,* worm, *cædo,* to kill). A medicinal agent employed to kill intestinal worms. See *Anthelmintics.*

Vermicular, vur-mik'u-lar (dim. of **Vermis,** worm). *Vermiform.* Worm-like, as the vermicular or worm-like motion of peristole of the intestines. **V. sul'ci,** those furrows which divide the vermis from the lateral hemispheres of the cerebellum.

Vermicularis, vur-mik-u-lah'ris. Lumbricalis sedum.

Vermiculate, vur-mik'u-late. Vermicular.

Vermiculation, ver-mik-u-la'shun (*vermis,* worm). Operation of moving in the form of a worm, as in the peristaltic motion of the intestines.

Vermiculi spermatici, vur-mik'u-le spur-mat'e-se (pl. of **Vermiculus,** dim. of **Vermis,** worm). Spermatozoa.

Vermiculum, vur-mik'u-lum. Elixir; tincture.

Vermiculus capillaris, vur-mik'u-lus kap-il-lah'ris (hair-worm). Dracunculus.

Vermiform, vur'me-form (*vermis,* worm, *forma,* form). That which resembles a worm. **V. appen'dix,** see *Appendix.* **V. pro'cesses,** two medullary projections at the surface of the cerebellum. The superior vermiform process, vermis superior cerebelli, is an elongated projection at the anterior and middle part of the superior surface of the cerebellum; and the inferior vermiform process, vermis inferior cerebelli, pyramid of Malacarne, is a somewhat larger projection situate in the depression at the inferior surface of the same organ. The inferior vermiform process is usually described as consisting of three portions—the pyramid, the uvula, and the nodulus. The anterior portion of the superior vermiform process is elevated, and termed monticulus. In front of this process is a notch which encircles the corpora quadrigemina posteriorly, called incisura cerebelli anterior; and behind the isthmus is another notch, called incisura cerebelli posterior.

Vermifuge, vurm'e-fuge (*vermis,* worm, *fugo,* to drive away). Anthelmintic.

Vermifugus, vurm-if'u-gus. Anthelmintic.

Vermilion, vur-mil'yun (*vermis,* worm, the color being like that from the cochineal insect; it also means cochineal). Hydrargyri sulphuretum rubrum.

Verminatio, vurm-in-ah'she-o (*vermis,* worm). Helminthiasis; vermination.

Vermination, vurm-in-a'shun. Helminthiasis. **V. cuta'neous,** infesting of the cuticle or skin with animalcules.

Verminous, vurm'in-ous (*vermis,* worm). That which is caused by worms, as a verminous affection.

Vermis, vur'mis (worm). See *Vermiform processes.* **V. bombyc'inus,** cornu ammonis. **V. cerebel'li,** vermiform process. **V. cer'ebri,** fever, Hungary. **V. cucurbiti'nus,** tænia solium. **V. dig'iti,** paronychia. **V. Guinien'sis,** filaria Medinensis.

Vermitio, vur-mish'e-o (*vermis,* worm). Helminthiasis.

Vermouth. A wine slightly tinctured with absinthium.

Vernal, vur'nal. Belonging to the spring. **V. conjunctivi'tis,** conjunctivitis in young people, making its appearance every spring or in the summer, and ceasing with frost. **V. fe'ver,** malarial fever.

Ver'nier. A scale attached to graduated instruments for the purpose of measuring fractions of distances.

Vernine, vur'neen. Leucomaïne base existing in ergot, etc.; when heated with hydrochloric acid guanine is obtained.

Vernix caseosa, vur'niks kas-e-o'sah (cheesy varnish). The fatty varnish or deposit often found on the fœtus, which is secreted by the sebaceous follicles of the skin. **V. sic'ca,** dry varnish, sandarac.

Vernonia anthelmintica, vur-no'ne-ah an-thel-min'tik-ah (after William Vernon, an English botanist and traveller in N. America). Plant indigenous in India, ord. Compositæ; had great celebrity in the East In-

dies, and is a bitter tonic, but the seeds are chiefly used as an anthelmintic for ascarides and lumbrici in children. **V. Nigritia'na**, plant native of Africa; root is febrifuge. **V. Noveboracen'sis**, *Iron weed, Flat top*, and **V. fascicula'ta**, an indigenous plant, are reputed to possess cathartic properties.

Vernonine, vur'non-een. Active principle obtained from root of Vernonia Nigritiana. Its action resembles that of digitaline, but it is not as poisonous as the latter.

Veronica, ver-on'ik-ah (after St. Veronica). *Male veronica, Pluellin, Officinal speedwell, Eyebright, Paul's betony.* Ord. Scrophulariaceæ; once used as a pectoral. **V. aquat'ica**, V. beccabunga. **V. beccabun'ga**, *Water pimpernel, Brookline, Brooklime speedwell, Water speedwell, Neckweed, Water purslain.* Plant formerly used in a variety of diseases. **V. mas**, veronica. **V. officina'lis**, veronica. **V. parviflo'ra**, plant of New Zealand; reputed to be useful in chronic dysentery. **V. peregri'na**, *Neckweed, Purslain, Speedwell;* indigenous; has been given internally in scrofulosis, and applied as a wash to scrofulous tumors. **V. purpu'rea**, Betonica officinalis. **V. quinquefo'lia**, E. Indian remedy for leprosy; the root is the part employed. **V. Tournefort'ii**, veronica. **V. Virgin'ica**, Leptandra Virginica.

Verpa, vur'pah. Penis.

Verpus, vur'pus. Circumcised; middle finger.

Verruca, ver-ru'kah. *Excrescence, Wart.* A small, hard, mammillary tumor which forms at the surface of the skin, and particularly on that of the hands and face. Warts are generally rugous at the surface and broad at the base, their roots being implanted in the derma by whitish filaments, which are dense, semifibrous, and very numerous. The flat wart is called verruca simplex; the pedunculated, verruca digitata. Warts may be destroyed by caustic or removed by excision; their vitality is, generally, not great. **V. acumina'ta**, the venereal wart, moist wart, consists of one or a number of pointed, mulberry, or cauliflower-like elevations situate upon the genitalia and adjoining regions. **V. carno'sa**, condyloma. **V. digita'ta**, see *Verruca.* **V. filifor'mis**, small wart, thread-like and with pointed end, usually located on the face, eyelids, and neck. **V. formica'ria**, formica. **V. gla'bra**, variety with smooth surface. **V. mi'nor**, a small wart on the skin resembling a bud of thyme. **V. mollus'ca**, condyloma. **V. necrogen'ica**, *Anatomical tubercle, Post-mortem wart;* production of a morbid epithelium, caused in dissecting by the acrid fluids of the dead body. **V. palpebra'rum**, see *Hydatid.* **V. pen'silis**, a hard wart which hangs by a pedicle. **V. pla'na** or **seni'lis**, variety which is flat and generally round and broad; usually occurs on the back and face of elderly people. **V. rhagoï'dea**, a small wart on the skin resembling a bud of thyme. **V. sim'plex**, see *Verruca.*

Verrucæ ani, ver-ru'ke an'e. See *Condyloma.*

Verrucaria, ver-ru-kah're-ah (*verruca*). Calendula officinalis; Heliotropium Europæum.

Verruciform, ver-ru'se-form. Resembling a wart.

Verrucose (ver'ru-koze) or **Verrucous**, ver'ru-kus. Warty.

Verrucositas conjunctivæ, ver-ru-kos'it-as konjunk-te've. Granular condition of the eyelids.

Verrucosity, ver-ru-kos'it-e. Condition of having warts.

Verrucula, ver-ru'ku-lah. See *Verruca.*

Verru'ga Perua'na. Verugas.

Versio, vur'se-o (*verto*, to turn). Turning. **V. fœ'tûs**, turning the fœtus. **V. sponta'nea**, evolution, spontaneous. **V. u'teri**, oblique position of the uterus.

Version (vur'shun), **biman'ual** or **bipo'lar.** See *Turning.* **V., cephal'ic**, see *Turning.* **V., exter'nal**, see *Turning.* **V., inter'nal**, see *Turning.* **V., pel'vic**, operation of turning the fœtus so that the breech presents. **V., podal'ic**, see *Turning.*

Vertebra dentata, vur'te-brah den-tat'ah (toothed vertebra). Axis. **V. dor'si pri'ma**, first vertebra of the back. **V. lumbo'rum pri'ma**, asphaltites. **V. mag'na**, sacrum. **V. odontoï'dea**, axis. **V. pro-em'inens** or **prom'inens**, see *Vertebræ.* **V. ve'ra**, true vertebra.

Vertebræ, vur'te-bre (pl. of **Vertebra**) (*verto*, to turn). The bones which by their union form the vertebral or spinal column; they are short, thick, very angular bones, twenty-four in number, and situate one above another. The body or centrum of the vertebra is the middle and anterior portion. Above and below it is articulated by means of a fibrocartilage with the contiguous vertebra. The processes of each vertebra are: the spinous process, situate behind and in the median line; the two transverse processes, standing off from each side; the four articular or oblique processes—zygapophyses, two superior and two inferior—which serve to unite the vertebræ with each other. These transverse and articulating processes are made continuous with the lateral and posterior parts of the body of the vertebra by narrow bony portions or pedicles, on each of which are notches. These by their union with similar notches in the contiguous vertebra form the lateral foramina, through which the spinal nerves leave the vertebral canal. The different processes are united with each other so as to form a kind of ring of lateral and posterior parts of the vertebra, and the foramen within this—that is, between the body and processes, foramen vertebrale rachidium—concurs in forming the vertebral canal. The arch or lamina of a vertebra, neurapophysis, is the part from which the several processes project. The vertebræ have particular characters according to the regions they occupy. They are divided into seven cervical, twelve dorsal, and five lumbar. The first cervical is called the atlas; the second, axis or vertebra dentata; and the seventh, vertebra pro-eminens or prominens. The vertebræ are articulated with each other. Those of the back are joined, moreover, to the ribs by their articulating surfaces—parapophyses. The first or atlas is articulated with the occipital bone, and the last lumbar vertebra with the sacrum.

Measurements of the vertebræ may be found under the heading *Man.*

Ver'tebræ abdomina'les. Lumbar vertebræ. **V. cauda'les**, sacral vertebræ. **V. coccygea'les**, coccygeal vertebræ. **V. col'li**, cervical vertebræ. **V. fal'sæ**, false vertebræ. **V. sacra'les**, sacral vertebræ. **V. spu'riæ os'sis sa'cri**, sacral vertebræ. **V. thorac'icæ**, dorsal vertebræ.

Vertebral, vur'te-bral. That which relates or belongs to the vertebræ. **V. aponeuro'sis**, fascia vertebralis. **V. arch**, neural arch. **V. ar'tery**, *Posterior cerebral artery*, the largest of the branches of the subclavian, arises from the posterior part of that vessel; is lodged in a canal formed by the foramina in the transverse processes; enters the cranium, and proceeds to anastomose with its fellow of the opposite side and to form the basilary artery. **V. canal'**, see *Vertebral column.* **V. col'umn**, *Spine, Backbone;* a kind of bony column situate at the posterior and central part of the trunk; extending from the head to the sacrum; flexible in every direction, yet very solid, and hollowed by a canal called vertebral, which gives it lightness without diminishing its strength, and runs through its whole length. The vertebral column is formed by the superposition of the vertebræ. It represents a pyramid whose base is below. Anteriorly, it is convex in the neck, concave in the back, and convex, again, in the loins. Behind, the curvatures are of course the reverse of these. There is also in the dorsal region a lateral curvature, the concavity of which is toward the left side. Considered as a whole, the vertebral column has an anterior or prespinal surface; a posterior or spinal; two lateral; a base; and an apex or top. In the nomenclature of Chaussier the anterior surface, in the neck, is called trachelian; in the back, predorsal; and in the loins, prelumbar. The dorsal surface has at its middle the spinous processes, and at its sides the vertebral gutters formed by the union of the vertebral plates, which, by their junction, constitute the spinous processes. These are filled by the sacrospi-

nalis muscle. The sides or lateral surfaces present the foramina resulting from the union of the vertebral notches. These are called vertebral foramina, and give passage to the vertebral nerves. The base of the vertebral column is oblique, to unite with the sacrum, and forms with it an angle called sacrovertebral angle or promontory. The apex or top of the vertebral column is articulated with the occipital bone. Sometimes the term vertebral column includes the whole of the column from the occipital bone to the extremity of the coccyx. The *Vertebral* or *Spinal* or *Rachidian canal, Solen, Canalis vertebralis* or *medullæ spinalis*, exists through the whole of the vertebral column, whose curvatures it follows. It is continuous, above, with the cranium; below, with the sacral canal, if we consider the vertebræ to terminate at the sacrum. It is lined by a prolongation of the meninges, forming the theca vertebralis, and lodges the spinal marrow. The vertebral column, which unites lightness with solidity, serves to support the head and chest. It is the seat of all the movements of the trunk, the weight of which it transmits to the pelvis. It lodges and protects the spinal marrow, and gives passage to the vertebral nerves and to numerous vessels. **V. disease'**, *Rhachialgia* (of some), *Caries of the vertebræ*. The spinal column is liable to distortion at times without the vertebræ being much, if at all, diseased. At other times a more formidable affection is induced, the vertebræ becoming carious and the intervertebral cartilages ulcerated, followed by a more or less complete loss of power over the lower extremities. In such case, on examining the spine, one or more of the spinous processes is found to project beyond the rest. The disease was first well described by Mr. Percival Pott, and hence it has been called *Pott's disease* or *boss* or *curvature*. It usually occurs in scrofulous subjects. The sore must be suffered to remain open, and the patient kept in the horizontal posture until the use of the limbs is recovered, employing tonics, the free admission of fresh air, etc. at the same time. **V. fora'men**, see *Vertebræ*. **V. lig'aments**, these are anterior and posterior. They consist of long ligamentous coverings, the anterior occupying the anterior part of the vertebral column, and the posterior seeming to arise from the occipito-axoid ligament, and seated behind the bodies of the vertebræ from the axis to the sacrum. **V. nerve**, trisplanchnic. **V. nerves**, *Spinal nerves*, spring successively from the spinal marrow, from its origin to its termination. These nerves—thirty pairs in all—arise by two roots, one anterior, from the anterior or antero-lateral column of the spinal marrow, and the other posterior, from the posterior or postero-lateral column, and afterward issue by the vertebral and sacral foramina. Each of these roots has a distinct function; the posterior being destined to convey sensation to parts; the anterior, motion. The posterior root, however, gives occasion, by its influence on the anterior, to reflex movements; while the anterior, by reacting on the posterior, induces the phenomena of *recurrent sensibility*. On the posterior root, before its junction with the anterior, there is a ganglion, intervertebral ganglion. Of the thirty pairs of nerves, seven are cervical, twelve dorsal, five lumbar, and six sacral. See *Nerves*. **V. plex'us**, sympathetic nerve along the vertebral artery. **V. polyarthri'tis**, see *Polyarthritis*. **V. ribs**, floating ribs. **V. sheath**, see *Vertebral column*. **V. vein**, this vein collects the veins from the vertebral canal and neck and empties into the innominate vein. *V. vein, anterior*, collects the blood from a plexus over the cervical vertebræ and empties into the vertebral vein. *V. vein, posterior*, vena cervicalis profunda.

Vertebrarterial foramen, vur-te-brar-te're-al forah'men. Foramen transversarium.

Vertebrata, vur-te-brah'tah. Sub-kingdom of the animal kingdom, embracing all animals having an internal jointed bony skeleton with a spinal cord.

Vertebrated, vur'te-bra-ted. Provided with vertebræ.

Vertebrectomy, vur-te-brek'tom-e (*vertebra, ektome*, excision). Excision of portion of a vertebra.

Vertebrobasilar plexus, vur'te-bro-bas'il-ar pleks'us. Vertebral plexus.

Vertebrochondral (vur-te-bro-kon'dral) **ribs.** Ribs which are attached posteriorly to the spine and anteriorly to the costal cartilages.

Vertebrocostal ligaments, vur-te-bro-kos'tal lig'aments. Ligaments which connect the ribs with the spinal column. **V. ribs**, vertebrochondral ribs.

Vertebrodymia, vur-te-bro-dim'e-ah (*vertebra, duo*, to mingle). See *Somatodymia*.

Vertebro-iliac ligament, vur'te-bro-il'e-ak lig'ament. Ileolumbar ligament.

Vertebrospinal veins, vur-te-bro-spi'nal. Those veins which connect plexuses of the spinal canal with the vertebral vein.

Vertebrosternal (vur-te-bro-stur'nal) **ribs.** Sternal ribs.

Vertex, vur'teks. The top or highest part or crown of the head; see *Sinciput*. **V. cor'dis**, apex of the heart. **V. cu'biti**, olecranon. **V. pal'pitans**, fontanella. **V. presenta'tion**, see *Presentation*.

Vertibulum, vur-tib'u-lum (*verto*, to turn). The rounded head of a bone, as of the humerus; a joint; trepan.

Vertical, vur'tik-al. Relating to the vertex; perpendicular to the plane of the horizon. **V. diam'eter of cra'nium**, line extending from basion to bregma. **V. in'dex**, ratio existing between greatest height and greatest length of cranium. **V. plate**, see *Palate-bone*.

Verticillium graphii, vur-te-sil'le-um graf'e-e. Fungus occasionally met with in the external auditory canal, which gives rise to irritation and discharge of pus.

Ver'tico-trans'verse circum'ference of skull. Estimated variously as follows: By Broca, over the surface from one auricular foramen to the other, through the bregma, thence on under surface to point of beginning, passing back of the styloid processes and in front of the condyles. By Frankfort agreement, over superior surface from auricular foramen to auricular foramen in a plane vertical to the auriculo-infraorbital plane.

Verticula (vur-tik'u-lah), **Verticulum** (vur-tik'u-lum), or **Verticulus**, vur-tik'u-lus (*verto*, to turn). Articulation.

Vertiginous, vur-tij'in-us. Relating or pertaining to vertigo; giddy; dizzy.

Verti'go (generally pronounced vur'te-go) (*verto*, to turn). *Giddiness, Dizziness, Swimming of the head.* A state in which it seems that all objects are turning round, or that the individual himself is performing a movement of gyration—*Vertigo gyrosa*. Two varieties have been designated: simple vertigo, where the objects are seen; and scotodynia, in which the sight is obscured and the individual often falls. Vertigo is dependent upon the condition of the brain as affected by the circulation, and often announces an attack of apoplexy or epilepsy. **V., aud'itory** or **au'ral**, Ménière's disease or labyrinthine vertigo. **V. ab au're læ'so**, Ménière's disease. **V., car'dio-vas'cular**, V. occurring in valvular disease of the heart, especially aortic insufficiency and arteriosclerosis. **V., cerebel'lar**, V. from pressure of a tumor on the cerebellum. **V., epilep'tic**, a form of V. accompanying an epileptic attack. **V., gas'tric**, V. dependent on irritation of the stomach, as in dyspepsia. **V. gyro'sa**, see *Vertigo*. **V., labyrinth'ine**, Ménière's disease. **V., objec'tive**, vertigo in which the patient imagines that objects move. **V., par'alyzing**, V. characterized by paresis and depression, attacking the male sex only. **V. a stom'acho læ'so**, *Abdominal dizziness;* vertigo dependent on or associated with well-marked gastric symptoms. **V., subjec'tive**, vertigo in which the patient imagines that he is being moved. **V. tenebrico'sa**, giddiness with impaired sight, and sometimes headache.

Veru montanum, ver'u mon-tan'um (mountain spit). Gallinaginis caput.

Veru'gas (S.) (*verruca*, wart). A peculiar disease affecting certain localities of Peru, manifesting itself by sore throat, pains in the bones, and other febrile symptoms. An eruption of red pimples soon appears; these sometimes become nearly as large as an egg, and discharge blood copiously. It is ascribed to the water of certain springs in the valleys, and especially in that of Surea, called aqua de veruga.

Vervain, vur'vain. Verbena officinalis. **V., blue,** Verbena hastata.

Vesalius, foramen of, ves-al'e-us, for-am'en. Small aperture in the sphenoid bone, at the inner side of the foramen ovale. **V., glands of,** bronchial glands. **V., lig'ament of,** Poupart's ligament; see *Crural arch.*

Vesania, ves-an'e-ah (*ve*, negative, *sanus*, sound). *Vesaniæ.* Madness; derangement of intellectual and moral faculties, without coma or fever. Sometimes used as a generic term to include different species of mental alienation, hypochondriasis, somnambulism, and even hydrophobia. **V. ma'nia,** mania.

Vesaniæ, ves-an'e-e. Insanity; vesania.

Vesica, ves-e'kah (bladder). Urinary bladder. **V. bilia'ria,** gall-bladder. **V. cor'dis,** see *Pericardium.* **V. fel'lea,** gall-bladder. **V. intestina'lis,** vesicula umbilicalis. **V. natato'ria,** gall-bladder. **V. prostat'ica,** see *Ejaculatory ducts.* **V. rup'ta,** rupture of the urinary bladder. **V. sacca'ta** or **saccula'ta,** sacculated bladder; stricture; narrowness or inequality of the urinary bladder. **V. urina'ria,** urinary bladder.

Vesicæ irritabilitas, ves-e'se ir-re-tab-il'it-as. Irritability of the bladder. **V. unguino'sæ ten'dinum,** bursæ mucosæ.

Vesical, ves'e-kal (*vesica*, bladder). That which belongs or relates to the bladder. **V. ar'teries** vary in number and origin. The umbilical artery always sends off two or three: the middle hemorrhoidal, internal pudic, and obturator furnish others, which ramify and anastomose in the parietes of the bladder; the hypogastric furnishes one somewhat larger, the vesicoprostatic, which proceeds to the bas-fond of the bladder, sending numerous ramifications to it as well as to the surrounding parts. **V. gan'glia,** see *Spermatic ganglion.* **V. lig'aments,** see *Urinary bladder.* **V. ox'ide,** oxide, cystic. **V. plex'us** surrounds the fundus of the urinary bladder and connects with the hemorrhoidal and pudendal plexus. **V. plex'us of veins,** veins which send branches over the surface of the bladder and which empty into the internal iliac vein. **V. sac'culus,** see *Bladder, sacculated.* **V. sphinc'ter,** sphincter vesicæ. **V. tri'angle,** see *Urinary bladder.* **V. u'vula,** see *Urinary bladder.* **V. veins,** much more numerous than the arteries, open into the hypogastric plexus.

Vesicant, ves'ik-ant (*vesica*, bladder). Blister.

Vesicarium, ves-ik-ah're-um. Ovary.

Vesication, ves-ik-a'shun (*vesica*). The action of a vesicant. The formation of blisters.

Vesicatorium, ves-ik-at-o're-um, Blister.

Vesicatory, ves'ik-a-to-re. Blister; epispastic.

Vesicle, ves'ik'l (dim. of **Vesica**). Vesicula. **V., allan'toid,** allantois. **V. of Baer,** the ovule in the follicle of De Graaf, which was well described by Baer in 1827. **V., blastoder'mic,** see *Molecule.* **V., cow'pox,** see *Vaccination.* **V. of devel'opment,** vesicle or cyst concerned in histogeny. **V. of evolu'tion,** V. of development. **V., ger'minal,** see *Molecule.* **V., malig'nant,** anthrax. **V., Purkin'jean,** see *Molecule.* **V., sem'inal,** pouches for reception of semen between the rectum and base of the bladder. **V., umbil'ical,** vesicula umbilicalis. **V., Valentin'ian,** see *Molecule.* **V., Wag'ner's,** see *Molecule.* **V., Webe'rian,** see *Ejaculatory ducts.*

Vesicles, Aschersonian, ves'ik-l's, ash-ur-so'ne-an. When fluid fat and fluid albumen are shaken together, the resulting fat-globules become surrounded by an albuminous layer. The vesicles thus formed are called after Ascherson, their describer. **V., cer'ebral,** see *Cerebrum.* **V. of De Graaf,** folliculi Graafiani. **V., lung,** see *Lung.* **V., Malpigh'ian,** cellules, bronchic; see *Lung.* **V., pri'mary,** see *Cerebrum.* **V., sem'inal,** vesiculæ seminales.

Vesicocele, ves-ik-o-se'le (Eng. ves'ik-o-seel) (*vesica*, bladder, *kele*, rupture). Cystocele.

Vesicocervical fistula, ves-ik-o-sur'vik-al fis'tu-lah. Fistula existing between bladder and cervix uteri.

Vesicoclysis, ves-ik-ok'lis-is (*vesica*, bladder, *klusis*, washing out). Injection of liquid into the bladder.

Vesicoprostatic, ves-ik-o-pros-tat'ik. Relating to the bladder and prostate. See *Vesical.* **V. plex'us,** pudendal plexus.

Vesicorectal, ves-ik-o-rek'tal. Relating to the vagina and rectum.

Vesicospinal centre, ves-ik-o-spi'nal sen'ter. Nerve-centre which exerts influence on micturition, situate between fifth and seventh lumbar vertebræ.

Vesico-umbilical ligaments, ves'ik-o-um-bil'ik-al lig'am-ents. Three in number, which connect the bladder with the umbilicus. The middle vesico-umbilical ligament is the obsolete embryonic urachus. The two lateral vesico-umbilical ligaments are the obliterated umbilical arteries, and connect the lateral walls of the bladder with the umbilicus.

Vesico-urachal, ves'ik-o-u'rak-al. Relating or appertaining to the bladder and urachus, as a vesico-urachal fistula.

Vesico-uterine, ves'ik-o-u'ter-in. Appertaining or relating to the bladder and uterus. **V.-u. folds,** see *Uterus.* **V.-u. pouch,** Douglas's cul-de-sac; see *Uterus.*

Vesico-uterovaginal, ves'ik-o-u-ter-o-vaj-i'nal. Relating to the bladder, uterus, and vagina, as vesico-uterovaginal hernia.

Vesicovaginal, ves'ik-o-vaj-i'nal. *Vaginovesical, Urinovesical.* Relating to the bladder and the vagina, as vesicovaginal fistula. **V. ar'tery,** vaginal artery. **V. fis'tula,** fistula existing between bladder and vagina, resulting from sloughing following difficult and protracted labor, or from ulceration. **V. her'nia,** see *Cystocele.*

Vesicula, ves-ik'u-lah (dim. of **Vesica**). *Vesicle, Blister.* Small bladder or cyst; small orbicular elevation of the cuticle, containing lymph, sometimes clear and colorless, but often opaque and whitish or pearl-colored. It is succeeded either by a scurf or by a laminated scab. **V. ænigmato'sa,** vesicula umbilicalis. **V. al'ba,** vesicula umbilicalis. **V. bi'lis,** gall-bladder. **V. blastodermat'ica,** see *Molecule.* **V. blastoder'mica,** see *Molecule.* **V. chy'li,** receptaculum chyli. **V. erythroi'dea,** erythroid vesicle. **V. fel'lis,** gall-bladder. **V. gangræ'nes'cens,** see *Anthrax.* **V. germinati'va,** see *Molecule.* **V. omphalomesenter'ica,** vesicula umbilicalis. **V. ova'lis,** vesicula umbilicalis. **V. prolif'era,** see *Molecule.* **V. prostat'ica,** see *Ejaculatory ducts.* **V. sero'sa,** false amnion. **V. spermat'ica spu'ria,** see *Ejaculatory ducts.* **V. umbilica'lis,** *Umbilical* or *Intestinal vesicle, Vitelline pouch, Vitellicle;* a small, pyriform, round, or spherical sac which, about the fifteenth or twentieth day after fecundation, is the size of a common pea, and probably acquires its greatest dimensions during the third or fourth week. After the seventh week it becomes shrivelled and disappears insensibly. It seems to be situate between the chorion and amnion, and is commonly adherent either to the outer surface of the amnion or to the inner surface of the chorion, but at times is loose between them. The *Vitelline pedicle* attaching the vesicle to the embryo is continuous with the intestinal canal, and up to twenty or thirty days of embryonic life is hollow—*Ductus omphalomesentericus* or *vitello-intestinalis* or *vitellarius, Vitelline duct.* Its arteries are the omphalomesenteric. The *vitelline fluid* contained in the vesicle—in the *vitelline* or *yolk membrane*—has been compared, from analogy, to the vitellus or yolk of birds, and, like it, is an oleaginous albuminous substance inservient to the nutrition of the embryo.

Vesic'ulæ (pl. of **Vesicula**). Vesicular skin diseases; see *Villous membranes.* **V. aë'reæ,** cellules, bronchic. **V. bron'chicæ,** cellules, bronchic. **V. cervi'cis u'teri,** ovula Nabothi. **V. di'væ bar'baræ,** variola confluens. **V. gingiva'rum,** aphthæ. **V. Graafia'næ,** folliculi Graafiani. **V. gris'eæ,** see *Spleen.* **V. Malpighia'næ,** cellules, bronchic. **V.**

membrana'ceæ, cellules, bronchic. **V. Nabo'thi**, Nabothian glands. **V. pulmona'les**, cellules, bronchic. **V. rotun'dæ cervi'cis u'teri**, Nabothi glandulæ. **V. san'guinis**, globules of the blood; see *Blood*. **V. semina'les**, *Seminal vesicles*. These are two small membranous sacs serving as reservoirs for the sperm, and probably secrete a fluid to be mixed with it. They are beneath the bladder, above the rectum, behind the prostate, and to the outer side of the vasa deferentia. Their anterior extremity or neck is narrow, elongated, being continuous with the excretory duct of the vesicula. This duct joins the vas deferens, forming with it the ejaculatory duct. **V. semina'les mulie'rum**, Nabothi glandulæ. **V. spermat'icæ**, see *Vesiculæ seminales*.

Vesicular (ves-ik'u-lar) or **Vesic'ulate**. Of or belonging to a vesicle; full of or containing small vesicles or cells. The cortical or gray matter of the brain is sometimes termed vesicular. See *Cortex cerebri* and *Neurine*. **V. fe'ver**, pemphigus. **V. lay'er**, containing ganglionic cells. **V. mur'mur**, sound heard over a healthy lung. **V. sound**, a fine breezy sound heard during inspiration, and due to dilatation of the air-cells of the lungs.

Vesiculif'erous (*vesicula*, *fero*, to bear). Bearing or consisting of vesicles.

Vesiculitis, ves-ik-u-le'tis. Inflammation of the seminal vessels.

Vesiculo'sus. Relating to or containing vesicles.

Vesiculotu'bular. A quality of respiratory sound combining vesicular and tubular factors.

Vesiculotympanitic, ves-ik-u-lo-tim-pan-it'ik. An epithet for a sound or resonance heard on percussion, consisting of the vesicular and tympanitic sounds combined. It occurs when the parenchyma of the lungs is incompletely solidified.

Vesiculous, ves-ik'u-lus. Shaped like or characterized by vesicles.

Ves'pa. Wasp.

Vespajus, ves-paj'us (*vespa*, wasp's nest). Suppurative follicular inflammation of the hairy scalp.

Vespertilio'nis a'la (bat's wing). A triangular portion of the broad ligament of the uterus, formed by the ligament of the ovary and the ovary itself. See *Uterus*.

Ves'sel. A canal more or less elastic, formed by the superposition of membranes; distinguished according to its uses and general arrangement into artery, vein, and lymphatic. See *Artery*, etc., *Vas*, and *Vascular*.

Vestibular, ves-tib'u-lar. Relating or appertaining to the vestibule. **V. an'gle**, external angle of cochlear duct between outer wall and membrane of Reissner. **V. ar'tery**, branch of internal auditory artery supplying the vestibule. **V. blind sac**, term applied to end of cochlear duct nearest to the vestibule in the internal ear. **V. mem'brane**, membrane of Reissner. **V. nerve**, see *Auditory nerve*. **V. pas'sage**, scala vestibuli; passage of the cochlea proceeding to the apex from lamina spiralis. **V. por'tion of coch'lea**, the portion situate near the vestibule.

Vestibule, ves'ti-bule (*vestio*, to clothe or cover). The porch or entrance to a house; hence a smooth cavity between the perineum and nymphæ in the female, which leads to two passages—to the urethra above and to the vagina below. Henle includes the labia pudendi also. **V. of the ear**, a cavity of an irregular shape forming part of the labyrinth or internal ear. The vestibule is situate on the inner side of the tympanum, on the outer side of the meatus auditorius internus, before the semicircular canals, and behind the cochlea. It is lined by a particular membrane, and contains the liquor of Cotunnius and branches of the auditory nerve. There is also another membrane, constituting the membranous vestibule, but it is not an exact imitation of the osseous cavity. It is composed of two distinct sacs opening into each other—the sacculus vestibuli and the sacculus. There are three contiguous cavities in the vestibule, one of which, the semi-oval, is situate above; another, the hemispherical, below; the third, or sulciform, being the orifice of the aquæductus vestibuli, behind. **V. of the mouth**, space included between the teeth and cheeks and lips. **V. of the vagi'na** or **vul'va**, space immediately behind the nymphæ.

Vestibulum labyrinthi, ves-tib'u-lum lab-ir-in'the. Vestibule of the ear. **V. laryn'gis**, superior cavity of the larynx. **V. na'si**, see *Nares*. **V. o'ris**, see *Mouth*. **V. os'seum**, vestibule of the ear. **V. pharyn'gis me'dium**, isthmus of the fauces. **V. vâgi'næ**, vestibule. **V. ventric'uli laryn'gis**, inferior portion of laryngeal ventricle.

Ves'tige. A kind of fracture of flat bones consisting of a simple incision having the mark of the instrument that caused it. The term is also applied to a part of the body which may have no evident use in man, and yet may be greatly employed in animals. For example, the muscles of the external ear in man, the vermiform appendix of the cæcum, etc.

Vestigial (ves-tij'e-al) **fold of pericar'dium**. Reduplication of serous layer of pericardium in front of the root of the left lung; it contains remnants of the left duct of Cuvier.

Vestigium, ves-tij'e-um. Sole; vestige. **V. fora'minis ova'lis**, ovalis fossa. **V. pe'dis**, metatarsus.

Vestimen'tum. Clothing.

Vestitus, ves-te'tus (*vestio*, to clothe). *Vestment*, *Clothing*, *Dress*, *Vesture*. Any substance used for the purpose of covering nakedness or preserving from atmospheric temperature by being worn on the body. The best clothing in winter consists of articles that are bad conductors of caloric, and do not admit of ready evaporation of the matter of perspiration. In this respect woollen vestments deserve the first place, cotton the second. Color has to be regarded—the darkest hues transmitting solar heat most readily through them. It has been found that the same rule applies to odors—the darker colors retaining a greater amount of odorous particles than the lighter. Hence the necessity of white walls, white bedclothes, etc. in hospitals, for probably that law applies to contagious miasms.

Vest'ment. Vestitus.

Vest'ure. Vestitus.

Ves'uvin. Triamidoazobenzol, a brown aniline dye suitable for staining nuclei and unicellular micro-organisms.

Ve'ta. Form of mountain sickness, known as puna. See *Marea*.

Vetch'ling. Lathyrus, a botanical genus.

Veterana, vet-er-an'ah. Rubeola.

Veterinarian, vet-er-in-a're-an. Specialist in veterinary medicine.

Veterinarius, vet-er-in-ar'e-us. See *Hippiater* and *Veterinary*.

Veterinary, vet'er-in-a-re (*veterinus*, bearing burdens, perhaps from *veho*, to carry). Pertaining to beasts of burden; hence veterinary surgeon, veterinary medicine, etc. **V. anat'omy**, see *Anatomy*. **V. art**, art of treating the diseases, etc. of animals, as the horse, cattle, etc. **V. med'icine**, veterinary art.

Veternoma'nia (*veternus*, lethargy, *mania*). Typhomania.

Veternositas, vet-er-nos'it-as (*vetus*, aged, because old persons are subject to somnolency). Coma vigil.

Veternus, vet-er'nus. Lethargy. See *Coma vigil*.

Vetiveria odorata, vet-e-va're-ah o-dor-at'ah. Andropogon muricatus.

Vetton'ica (after the Vettones of Spain). Betonica officinalis.

Vet'ula. Sacrum.

Vetyver, vet'i-vair. Andropogon muricatus.

Vexil'la (pl. of **Vexillum**) **tuba'rum Fallo'pii**. See *Tube*, *Fallopian*.

Via, ve'ah. Way. **V. curan'di**, method of cure. **V. stom'achi et ven'tris**, œsophagus.

Viabil'ity. See *Viable*.

Viable, vi'a-b'l (*vita*, life, *habilis*, able). Epithet applied to a fœtus whose organs are properly formed and so developed as to permit its continued existence. Every fœtus is not viable. Anencephali have lived ten or twelve days, yet they are not viable. The

older the fœtus the more viable it is. It is an idle prejudice that a child born at the end of eight months is less likely to live than one born at the end of seven. The signs of viability are drawn from the weight, length, external conformation, etc. of the fœtus. It may be laid down as a general rule that a fœtus born before the end of the seventh month is not viable.

Viæ chyliferæ, ve'e kil-if'er-e. Chyliferous vessels. **V. clandesti'næ**, *Clandestine passages*, suppositious secret ways or passages or "royal roads," to account, for example, for the rapid transmission of substances taken into the stomach to the kidneys or bladder. **V. extraordina'riæ lac'tis**, secretion of milk elsewhere than in the breasts. **V. lacryma'les**, lacrymal passages. **V. pri'mæ**, ways, digestive. **V. secun'dæ**, ways, second.

Vi'al. A small glass bottle; a phial.

Vi'and. Any kind of food, but particularly flesh foods.

Vibernum, ve-bur'num. See *Viburnum*.

Vibices, vib'is-ees (pl. of **Vibex**, mark of a stripe). Large purple spots, like the marks produced by the strokes of a whip, appearing under the skin in certain malignant fevers. They are unfavorable indications, as they denote great prostration.

Vibramen, vib-ram'en (*vibro*, to quiver). Oscillation.

Vi'brans. Vibratory.

Vibratile, vi'bra-til. Possessed of oscillation; vibrating. Capable of vibratory motion. **V. cells**, ciliated epithelium.

Vibratility, vi-bra-til'it-e. Capability of being thrown into vibration.

Vibratio, vib-rah'she-o. Oscillation; vibration. **V. cardi'aca**, palpitation. **V. cor'dis**, palpitation.

Vibration, vi-bra'shun. Oscillation. **V., pec'toral**, see *Fremitus*. **V., tac'tile**, see *Fremitus*. **V., tus'sive**, see *Tussive*.

Vibra'tions of sound. See *Sound*.

Vi'bratives. Term applied to certain consonants because of their mode of production.

Vibrator, vi'bra-tor. Deferens vas. Also mechanical contrivance to passively exercise muscles.

Vibratory, vi'bra-to-re. *Vibrative.* An epithet applied to the pain accompanying some neuralgiæ, seeming to the patient to vibrate among the nerves. **V. mo'tion**, see *Cilia*.

Vibra'tus. Oscillation.

Vibrio, vib're-o (*vibro*, to quiver). A genus of infusory animalcules, of which different species are met with; for example, *V. prolifer*, in almost all putrescent fluids containing protein and in the pus of chancres, in which last the *V. lineola* has likewise been found. Bacteria are considered by many synonymous with vibriones; both indicate the existence of organic substances associated with putrefaction. See *Micrococci*. **V. butyric'ea**, bacillus butyricus. **V. pro'teus**, discovered by Finchler; probably same as comma-bacillus found in fecal matter by Nicati and Rietch. **V. ru'gula**, found in tartar of teeth and putrefying liquids. **V. sep'ticus**, bacillus found in septic and pyæmic pus. **V. ser'pens**, in liquids undergoing putrefaction. **V. un'dula** exists in putrid liquids containing mucus.

Vibrissæ, vib-ris'se (*vibro*, to quiver). Hairs growing at the entrance of the nostrils and of other apertures. In the feline tribe, the whiskers.

Vibur'nic acid. Acid from the bark of Viburnum prunifolium, identical with valerianic acid.

Vibur'nin. Bitter resinous body from Viburnum prunifolium.

Viburnum (vib-ur'num) **acerifo'lium.** *Maple-leaved arrow wood, Dockmackie*, ord. Caprifoliaceæ. A plant used by the Indians, and afterward by the Dutch, as external application to tumors. **V. cassinoï'des**, Ilex Paraguensis. **V. denta'tum**, *Arrow wood, Mealy tree, Tily* of the Indians; high indigenous shrub of the same family as V. lentago, the bark of which has been used by the Indians as a diuretic. **V. edu'le** flourishes in the Hudson Bay territory; fruit has orange color, less acid, more fleshy, and more agreeable to the taste than the cranberry. **V. læviga'tum**, Ilex Paraguensis. **V. lenta'go**, *Sweet viburnum, Nannyberry;* handsome indigenous tree used as antiperiodic. **V. obova'tum**, native shrub of Southern States having antiperiodic properties. **V. op'ulus**, shrub of United States and Europe; cranberry tree or snow-ball; the ornamental fruit is red, acid, and has been used as a substitute for the cranberry; has been supposed to possess antispasmodic virtues. **V. prunifo'lium**, *Black haw, Sloe-leaved viburnum, Sloe*; indigenous; leaves have been used as a tea; the bark is officinal under the name Viburnum (Ph. U. S.); it has been used as a remedial agent in the nervous disorders of pregnancy and uterine diseases. **V., sloe'-leaved**, V. prunifolium. **V., sweet**, V. lentago. **V. ti'nus**, *Laurestinus*, ornamental shrub of Europe; seeds are purgative.

Vicarious, vik-a're-us (*vicis*, change). Taking the place of another, as vicarious secretion, secretion which takes place in one part instead of another; v. hemorrhage, etc. **V. menstrua'tion**, bloody discharge from the nose, rectum, stomach, or any portion of the body in the female, substituting menstruation.

Vice (*vitium*). Defect, fault, depravity, or immorality. Also applied to constitutional defect or disease or fault of conformation, and to bad habits.

Vichy (vish'e), **min'eral wa'ters of.** Celebrated alkaline chalybeates, the sources of which are at Vichy, in the department of Allier, France. The springs are almost all thermal, give off bubbles of carbonic acid gas, have slightly sulphureous odor, and contain a very large amount of alkali. They range in temperature from 53° to 110° F. They are employed as tonics, particularly in chronic affections of the liver and abdominal viscera generally, in old catarrhs, diseases of the joints, diabetes, etc., and wherever the use of strongly alkaline waters is indicated. A factitious Vichy water is made in imitation, and may be had on draught at the soda-water counters of almost all druggists.

Vic'ia ervil'ia. Ervum. **V. fa'ba**, *Common garden bean;* ord. Leguminosæ. A native of Egypt. There are many varieties of beans, none of which are easy of digestion; they are proverbially flatulent, especially when old. When young they are more digestible and wholesome.

Vicinitractus, vis-in-e-trak'tus (*vicinus*, near, *traho*, to draw). Erysipelas.

Vicinitraha, vis-in-it'rah-hah. Erysipelas.

Vicissitude, vis-is'se-tude (*vicis*, change). Constant change. The vicissitudes of the atmosphere, regarding its barometric, thermometric, and hygrometric condition, have to be guarded against by the delicate, yet by the new impressions they produce are probably a cause of the greater mental and corporeal activity of the inhabitants of the temperate regions.

Vicq d'Azyr (vik daz-eer'), **bundle of.** Bundle of white fibres in the optic thalamus, around the base of the anterior nucleus. **V. d'A., cen'tra ova'lia of**, the white matter of the brain seen on horizontal section at the level of corpus callosum.

Victo'ria blue. Blue stain, used especially for elastic tissue. **V. re'gia**, species of water-lily, native of region of Amazon River, having leaves about seven feet in diameter and blossoms eighteen inches in width.

Victoria'lis femine'a. Gladiolus vulgaris. **V. lon'ga**, Allium victoriale. **V. rotun'da**, Gladiolus vulgaris.

Vic'tûs ra'tio (order of victuals) (*vivo, victum*, to live). Dietary.

Vid'ian ar'tery. A branch of the sphenomaxillary portion of the inferior maxillary artery accompanying the Vidian nerve, and distributed to the pharynx and Eustachian tubes. **V. canal'** (after Vidus Vidius), pterygoid canal. **V. nerve**, pterygoid nerve.

Vieï'rin. Bitter principle from bark of Remijia Vellozii of Brazil, where it is used as an antiperiodic and tonic, like quinine.

Vien'na paste and **pow'der.** See *Powder, Vienna.*

Vieussens (ve-u'sens), **cen'trum ova'le of.** The appearance presented by horizontal section of the cerebral hemispheres at the level of the corpus callosum. **V., gan'glion of,** solar plexus. **V., loop of,** ansa Vieussenii. **V., valve of,** valvula Vieussenii.

Vigilance, vij'il-ance. Insomnia.

Vigilan'tia, Vigila'tio, Vigil'la, or **Vigil'iæ** (*vigil,* on the watch). Watchfulness; morbid want of sleep.

Vigil'iæ nim'iæ. Morbid loss of sleep; coma vigil.

Vigil'ium. Watchfulness; morbid want of sleep.

Vig'na Sinen'sis. Plant of order Leguminosæ, native of China, where it is used as a food.

Vig'or (activity, force). Acme.

Villar'sia. Genus of aquatic plants belonging to order Gentianaceæ. Certain ones of the series contain a bitter principle. **V. In'dica,** aquatic medicinal plant of India.

Vil'late's liq'uor or **solu'tion.** Copper sulphate, 15 p.; zinc sulphate, 15; liq. plumbi subacetatis, 30; vinegar, 200. Has been employed locally in caries of bone. See *Liquor of Villate.*

Vil'li (*villus,* tuft of hair). See *Villous membranes.*

Villiferous, vil-lif'er-us (*villus,* wool, *fero,* to bear). Having hairs or villi.

Villitis, vil-le'tis. Coronitis.

Villosity, vil-los'it-e. Having long hairs or villi; hairy.

Vil'lous or **Vil'lose** (*villus,* tuft of hair). Having villi. **V. coats,** V. membranes. **V. growths,** papillomata. **V. mem'branes** are those covered with fine delicate prolongations, papillæ or villi, flocci, flocculi, vesiculæ, cylindri, tubi membranacei, constituted of blood-vessels, nerves, and absorbents, or covered with fine down, causing them to feel soft and velvety. The term is, however, chiefly restricted to the former. The name simple villous membranes is given by some to the serous membranes, and that of complicated or follicular villous membranes to the mucous membranes.

Vil'lus. Latin word meaning wool or hair. The plural, *Villi,* is applied to the projections on the valvulæ conniventes. Botanically, villi means the soft hairy filaments seen on various plants.

Vimineous, vim-in'e-us (*vimen,* a twig). Having twigs or resembling long slender twigs.

Vina medicata (medicated wines), ve'nah medik-at'ah. See *Vinum medicinale.*

Vin'ca. A genus of nat. ord. Apocynaceæ. **V. ma'jor** and **V. mi'nor,** leaves used for astringent, antihemorrhagic, and antigalactic properties.

Vincetoxicum, vin-se-toks'ik-um (*vinco,* to overcome, *toxicum,* poison). Asclepias vincetoxicum. **V. officina'le** belongs to the ord. Asclepiadaceæ, and possesses emetic and drastic properties.

Vinctura, vink-tu'rah (*vincio,* to bind). Fascia.

Vincula (vink'u-lah) (*vinculum,* a band) **accesso'ria.** On the thecæ of the fingers several small tendinous fasciculi are seen, which pass between the phalanges and the edges of the tendons, and are so called. **V. ten'dinum,** small fasciculi of fibrous connective tissue running from a tendon to its sheath. Fasciculi or bands uniting tendons of extensor communis digitorum on back of hand. Bands forming sheath for flexor tendons as they pass over the phalanges. Ligamenta vaginalia. **V. vasculosa,** vincula tendinum.

Vin'culum (*vincio,* to bind). Bandage, fascia. **V. cani'num,** frænum penis. **V. lin'guæ,** frænum linguæ. **V. præpu'tii,** frænum penis. **V. subfia'vum,** small tendon of yellow elastic tissue extending between the flexor tendons and the head of the second phalanx; belongs to the ligamentum breve digiti. **V. umbilica'le,** umbilical cord.

Vine. Vitis vinifera. **V., grape,** Vitis vinifera. **V., poi'son,** Rhus radicans. **V., wild,** pareira.

Vin'egar (*vinum,* wine, *acris,* sharp or sour). Acetum. **V., aromat'ic spir'it of,** see *Aceticum acidum.* **V. of blood'root,** acetum sanguinariæ. **V. of cantha'rides,** acetum cantharidis. **V. of carbol'ic ac'id,** carbolic acid, 1 p.; acetic acid, 20; water, 980 parts. **V. of col'chicum,** acetum colchici. **V. of col'chicum-root** consists of fresh colchicum-root, 20 p.; vinegar, 98; glacial acetic acid, 2; allow to macerate. **V., com'mon,** acetum. **V. of digita'lis,** acetum digitalis: digitalis, 5 p.; alcohol, 5; dilute acetic acid, 9; water, 36. **V., distilled,** see *Aceticum acidum.* **V., es'tragon,** see *Artemisia dracunculus.* **V. of lobe'lia,** acetum lobeliæ. **V., Marseilles,** acetum aromaticum. **V. of mead'ow saf'fron,** acetum colchici. **V., moth'er of,** see *Mother of vinegar.* **V. of o'pium,** acetum opii. **V. plant,** Penicillium glaucum. **V., rad'ical,** aceticum acidum. **V. of rose,** made by macerating red-rose petals in dilute vinegar. **V. of sanguina'ria,** sanguinaria, 10 p.; water, q. s. ad 100 parts; percolate. **V. of squills,** acetum aromaticum. **V., thieves',** acetum aromaticum. **V. whey,** see *Acetum.* **V. of wood,** see *Aceticum acidum.*

Vinetina, vin-et-e'nah. See *Oxyacantha Galeni.*

Vine'worts. Name given by some to ord. Vitaceæ.

Vi'nic ac'ids. Series of acids obtained by the action of acids upon alcohol.

Viniferous, vi-nif'er-us (*vinum,* wine, *fero,* to carry). Wine-producing.

Vinolenta, vin-o-len'tah (*vinum*). See *Temulentia.*

Vinolentia, vin-o-len'she-ah. Drunkenness.

Vinosus, vin-o'sus. Vinous.

Vinous, vi'nus (*vinum*). Relating to, having the character of, or resembling, wine. Made of wine.

Vi'num (*oinos*). Wine; sherry wine. See *Wine.* A medicinal wine. See *Vinum medicinale.* **V. absinthi'tes,** *Wine of wormwood* (fol. absinth. exsicc., absinth. pontic., āā ℥vj; vini albi, Oiv; macerate for 24 hours and strain); stimulant, tonic, febrifuge, vermifuge. **V. adus'tum,** brandy. **V. al'bum,** defined in the Ph. U. S. as a pale amber-colored or straw-colored alcoholic liquid, made by fermenting the unmodified juice of the grape, freed from seeds, stems, and skins; sherry wine; see *Wine.* **V. al'bum for'tius** (Ph. U. S.), made by fortifying V. album until it contains 20 to 25 per cent. of alcohol. **V. al'bum Hispan'icum,** see *Wine.* **V. al'bum monta'num,** see *Wine.* **V. al'oës** (Ph. U. S.), *Wine of aloes* (aloës, ℥ij; cardam., gr. cxlvj; zingib., gr. cxlvj; vini alb. fort., q. s. to make Oij); purgative and stomachic, according to the dose; dose, f℥j–ij. **V. ama'rum,** V. gentianæ compositum. **V. ama'rum scillit'icum,** V. diureticum amarum. **V. ama'rum cum spir'itû vi'ni,** V. gentianæ compositum. **V. aminæ'um,** aminæum vinum. **V. antimonia'le,** V. antimonii tartarizati. **V. antimonia'tum Hux'hami,** V. antimonii tartarizati. **V. antimo'nii** (Ph. U. S.), *Solution of tartarized antimony, Antimonial wine* (ant. et potass. tart., gr. lviij; aq. destillat. bullient., f ℥ij; vini albi fortius, q. s. to make Oij); each fluidounce contains two grains of the tartrate; dose, as an expectorant, 10 to 30 drops; as an emetic, ♏xxx–f℥j. **V. antimo'nii potassiotartra'tis,** V. antimonii tartarizati. **V. aromat'icum** (Ph. U. S.), *Aromatic wine* (gr. lxxij each of lavender, peppermint, wormwood, sage, rosemary, and origanum; stronger white wine, q. s. to make Oij); tonic and stimulant; used externally in fomentations, etc. **V. aromo-aloët'icum,** V. aloës. **V. auran'tii** (Ph. Br.), *Orange wine,* wine made by fermentation of a saccharine solution to which the fresh peel of the bitter orange has been added. **V. benedic'tum,** V. antimonii tartarizati. **V. campa'num,** champagne wine; sparkling wine of France; see *Wine.* **V. camphora'tum** (Ph. G.), wine of camphor. **V. Canari'num,** see *Wine.* **V. chalybea'tum,** Vinum ferri, wine of iron. **V. cincho'næ compos'itum,** V. de kinâ kinâ compositum. **V. cincho'niæ,** see *Vinum quiniæ.* **V. col'chici, V. col'chici radi'cis** (Ph. U. S.), *Wine of colchicum, W. of colchicum-root* (colchic. rad., ℥xiij; vini albi. fortius, q. s. to make Oij); diuretic, sedative, and purgative; chiefly used in gout; dose, ♏x–xx. **V. col'chici sem'inis,** *Wine of colchicum-seed* (colchic. sem., ℥v; vini albi fortius, q. s. to make Oij); dose, ♏xxx–f℥ij. **V. crema'tum,** brandy. **V. diuret'icum ama'rum,** *Bitter diuretic wine* (cort. cinchon., c. winteran., limon., āā ℥ij; rhois toxicodendr., scillæ cacumin., angelicæ, āā ℥ss; fol absinth., melissæ, āā ℥j; baccar. junip., macis, āā ℥ss; vin. alb., Oviij);

stimulant, tonic, and diuretic; dose, f℥ss–iss. **V. emet'icum,** V. antimonii tartarizati. **V. er'gotæ** (Ph. U. S.) (ergot., ℥v; vini albi fortius, q. s. to make Oij); dose, as a parturifacient, f℥ij–iij; for other actions of ergot, ♏xxx–f℥j or f℥ij. **V. ferra'tum,** V. ferri. **V. fer'ri,** *Steel wine, Wine of iron* (iron wire, ℥j; sherry wine, Oj imp.; Ph. Br.); tonic; dose, f℥j–iv. **V. fer'ri ama'rum** (Ph. U. S.), bitter wine of iron (liquor. ferri et quininæ citrat., f℥xvij; tinct. aurant. cort. dulcis, f℥iv; syrup., f℥x; vini albi fort., Oj); mild chalybeate tonic; dose, f℥ij–f℥ss. **V. fer'ri citra'tis,** *Wine of citrate of iron* (ferri et ammoniæ citrat., gr. lxxx; tinct. aurantii cort. dulcis, f℥v; syrup., f℥iij; vini albi fortius, f℥xxiij); dose, f℥j–ij. **V. gentia'næ,** *V. gentianæ compositum, Compound wine of gentian, Wine bitters* (rad. gentian. lutæ, ℥ss; cort. cinchon. offic., ℥j; cort. aurant., ℥ij; cauellæ alb., ℥j; alcohol. dilut., f℥iv; vini alb. Hispanic., Oiiss); dose, f℥j–f℥ss. **V. Hippocrat'icum,** claret. **V. Hispan'icum,** see *Wine.* **V. hordea'ceum,** cerevisia. **V. Hux'hami,** vinum antimonii. **V. hydato'des,** see *Hydatoid.* **V. ipecacuan'hæ** (Ph. U. S.), *Wine of ipecac, Ipecacuanha wine* (extract. ipecac. fluid., f℥xx; vini albi fortius, f℥xxx); emetic and diaphoretic; dose, as emetic, to adults, f℥ss-j; as expectorant and diaphoretic, ♏x–xxx. **V. de ki'nâ ki'nâ compos'itum,** *Compound bark wine* (cort. cinchon., ℔ss; quassiæ, cort. winteran., cort. aurant., āā ℥ss; alcohol., Oj; vini albi, Ovj); tonic, febrifuge, stomachic; dose, f℥ss–ij. **V. martia'tum,** V. ferri. **V. mar'tis,** V. ferri. **V. medica'tum,** see *Claret* and *V. medicinale.* **V. medicina'le,** *Medicated wine;* wine holding in solution one or more medicines. Medicinal wines are obtained by macerating or digesting medicinal substances in wine. They differ, of course, according to the nature of the medicines employed, the strength of the wine, etc. Few officinal wines—*Vina medicata*—are retained in the pharmacopœias, on account of their proneness to decomposition, and their consequent inferiority to tinctures. Stronger white wine—vinum album fortius—is generally adopted in the U. S. Pharmacopœia as the menstruum. See *Vinum.* **V. me'rum,** aëratum. **V. nicotia'næ taba'ci,** V. tabaci. **V. opia'tum fermentatio'ne para'tum,** laudanum abbatis Rousseau. **V. o'pii** (Ph. U. S.). *Wine of opium, Sydenham's laudanum, Ford's laudanum* (opii, gr. ccccIvj; cinnam., gr. xlv; caryophyll., gr. xlv; vini albi fort., q. s. to make up f℥x); narcotic; dose, 10 to 20 drops. **V. de o'pio compos'itum,** V. opii. **V. pica'tum,** pissites. **V. Portugal'icum,** wine of Portugal or of Oporto; port wine. A strong astringent wine, not much drunk in the United States, but greatly used in England. **V. qui'niæ** or **V. quini'næ,** *Wine of quinia* or *quinine, Quinine wine* (quininæ sulph., gr. xx; acid. citric., gr. xxx; vin. aurant., Oj; Ph. Br.); dose, f℥ss–f℥j, according as it is used as a stomachic or to arrest ague. *Vinum cinchoniæ* may be made in the same way. **V. rhabar'bari,** V. rhei palmati. **V. rhe'i** (Ph. U. S.), *Rhubarb wine, Wine of rhubarb* (rhei, ℥iii¼; calami, gr. cxl; vin. alb. fort., q. s. to make Oij); cordial laxative and stimulant; dose, f℥ij–iv or f℥j. **V. rhe'i palma'ti,** V. rhei. **V. Rhena'num,** see *Wine.* **V. ru'brum,** V. Portugallicum. **V. ru'brum Portugal'icum,** see *Wine.* **V. scillit'icum compos'itum,** compound wine of squill. **V. stibia'tum,** V. antimonii. **V. taba'ci,** *Tobacco wine* (tabac., ℥j; vini albi, Oj); narcotic, diuretic, and antispasmodic; used in dropsical cases, colica pictonum, and ileus; dose, gtt. xx to xxx. **V. Theba'icum** (P. Dan.), wine of opium. **V. Theba'icum croca'tum** (P. Dan.), Sydenham's laudanum. **V. vera'tri,** *Wine of white hellebore* (veratri, ℥iv; vini albi, Oj); in cutaneous affections and gout; dose, ♏x. **V. vera'tri al'ba,** V. veratri. **V. Xeren'se** or **Xer'icum,** sherry wine; see *Vinum album.*

Vi'ola. *Sweet violet.* Ord. Violaceæ; flowers of the sweet violet have a pleasant, peculiar odor, but scarcely any taste; they are slightly laxative. **V. cani'na,** *Dog violet;* root of this plant is emetic and cathartic; dose, ℈j. **V. cucul'la'ta,** common native blue violet. **V. ipecacuan'ha,** see *Ipecacuanha.* **V. lu'tea,** Cheiranthus cheiri. **V. mar'tia,** viola. **V. odora'ta,** sweet violet of Europe. **V. palus'tris,** Pinguicola vulgaris. **V. peda'ta,** this indigenous violet, growing from New England to Carolina, is regarded by some as a useful demulcent in pectoral affections. **V. sylves'tris,** V. canina. **V. tri'color** (Ph. U. S.), *Heart's-ease, Pansy, Pensy, Johnny-jump-up, Johnny-jumper.* Decoction of the plant has been recommended in diseases of the skin, etc.; its roots are also emetic and cathartic.

Violaceæ, ve-o-las'e-e. Natural order of plants growing in the temperate zone, including the viola, noisettia, lanvagesia, and the ionidium. The roots are supposed to possess emetic properties.

Viola'ceous. Violet-like; resembling violets.

Violaria, ve-o-lah're-ah. Viola.

Violation, vi-o-la'shun (*violo,* to deflower, to defile). Rape; defloration. See *Stuprum.*

Vi'olet. Viola; rays of visible spectrum possessing the highest refrangibility. **V. blind'ness,** blindness to violet rays of light. **V., dog,** Viola canina. **V., dog's tooth,** Erythronium Americanum. **V., sweet,** viola.

Vi'olet-bloom. Solanum dulcamara.

Vi'olin. Emetico-cathartic principle of Viola tricolor and V. odorata.

Viorna, ve-or'nah. Clematis vitalba.

Vi'per, Egyp'tian. Aspis; see *Vipera.* **V., ten-inch-long,** Echidna ocellata.

Vi'pera (*vivus,* alive, *pario,* to bring forth). Systematic name of the viper. Coluber berus.

Viperaria, vip-er-ah're-ah (*vipera*). Aristolochia serpentaria; scorzonera.

Vi'pergrass. Scorzonera.

Viperi'na Virginia'na (*vipera*). Aristolochia serpentaria.

Viperine, vi'per-een. A peculiar principle contained in the poison of venomous snakes.

Vi'per's dance. Chorea.

Vir (man). Aner; homo; penis. **V. effœmina'tus,** an effeminate man.

Vi'ra. Woman.

Virago, vir-ag'o (*vir,* man). A female with a beard.

Vi'res (*vires,* sense) (pl. of **Vis,** strength). Strength.

Virescent, vi-res'sent. Having a greenish color, shading into or becoming green.

Virga, vur'gah (rod). Penis. **V. au'rea,** golden rod. **V. ce'rea,** bougie. **V. cer'ebri,** pineal gland.

Virgate, vur'gate (*virga,* rod). Long, rod-like, straight, twig-like.

Virgilia, vur-jil'e-ah (after the poet Virgil). Cladastris tinctoria. **V. lu'tea,** see *Cladastris tinctoria.* **V. oil,** that flowing first from ripe pulp of the olive on expression.

Vir'gin. A female who has never had sexual intercourse. Applied also occasionally to the male so circumstanced. **V. hon'ey,** that flowing from honeycomb when cut or broken, without the application of heat or pressure. Also applied to the honey of young bees before they have ever swarmed. **V. Mary this'tle,** Centaurea benedicta. **V. scam'mony,** finest quality of scammony.

Vir'ginal (*virgo,* virgin). External genital organs of the virgin. Relating to a virgin, *Virginalis.* **V. gen'era'tion,** parthenogenesis. **V. mem'brane,** hymen.

Virgina'le claus'trum (a virginal fence). Hymen.

Virgin'ia cow'slip. Mertensia Virginica. **V. creep'er,** *Ampelopsis quinquefolia;* a vine of nat. ord. Vitaceæ; indigenous; used as an ornamental vine. In medicine has been employed as a tonic and alterative. **V. dog'wood,** Cornus florida. **V. lung'wort,** Mertensia Virginica. **V. poke,** Phytolacca decandra. **V. snake'root,** Aristolochia serpentaria. **V. stone'cross,** Penthorum sedoïdes; possesses astringent properties, and has been used in catarrhal troubles. **V. thyme,** Pycnanthemum linifolium.

Virginis vitiatio, vur'jin-is vish-e-ah'she-o (violation of a virgin). Defloration.

Virginitas, vur-jin'it-as. Virginity. **V. deflora'ta,** defloration.

Virginity, vur-jin'it-e. *Maidenhood, Maidenhead.* State of one who has never had carnal commerce.

Vir'gin's bow'er, com'mon. Clematis vitalba, Clematis Virginica. **V.'s bow'er, sweet-scent'ed,** Clematis flammula. **V.'s bow'er, up'right,** Clematis recta. **V.'s milk,** tincture of benjamin or of any other balsam, precipitated by the addition of water, which gives it a milky appearance; also subacetate of lead precipitated by water. It has been used as a cosmetic to remove freckles, etc.

Virgo, vur'go. Virgin. **V. au'rea,** Solidago virgaurea.

Virgula, vur'gu-lah (dim. of **Virga,** a rod). Penis.

Virgultum, vir-gul'tum (*virga,* a rod). Young slender twig, shoot, or branch.

Viri, vir'e (plural of **Vir**). See *Vir.*

Viride (vir'id-a) **æ'ris** (green of brass). Cupri subacetas. **V. monta'num,** cuprum.

Viridescent, vir-i-des'cent (*viridis,* green). Virescent.

Viridia, vir-id'e-ah. See *Veratrum viride.*

Viridiflo'rus (*viridis,* green, *flor,* flower). Having green flowers. Used to denote Melaleuca viridiflora, Acerates viridiflora, and other species.

Viridin, vir'id-in (*viridis,* green). Name proposed for chromule by De Candolle.

Virile, vir-e'la (*vir,* man). Penis.

Virile, vir'il (*vir,* man). Relating or appertaining to man or the adult age. **V. age,** see *Age.* **V. mem'ber,** penis.

Virilescence, vir-il-es'sence (*virilis, vir,* man, manly). State of the aged female in which she assumes some characteristics of the male.

Virilia, vir-il'e-ah (*vir,* man). Pudibilia.

Virilitas, vir-il'it-as. Adult age. See *Age.*

Virilita'tis ino'pia. See *Impotence.*

Virility, vir-il'it-e. Adult age. Mature manhood. See *Age.*

Viro'la. Genus of trees including various species of nat. ord. Myristicaceæ. Natives of S. America, grouped with the Myristica by many botanical authorities. **V. sebif'era,** indigenous to Brazil and Guiana; the seeds furnish a solid oil used in making candles. The juice of the bark has been used in medicine.

Virose, vi'rose. Virous.

Virosus, ve-ro'sus. Virous.

Vi'rous (*virus*). Possessed of noxious properties; also having a peculiar nauseous taste and odor.

Vir'tue. Faculty.

Vir'tus (power). Faculty; property. **V. forma'trix,** plastic force. **V. plas'tica,** plastic force.

Virulence, vir'u-lence. Malignancy. Intensity of action. The specific quality of any virus. See *Virus.*

Virulent, vir'u-lent (*virus*). That which is of the nature of virus or which is caused by a virus; highly noxious.

Vi'rus. A Latin word signifying poison, but having, in medicine, a somewhat different acceptation. By it is understood a principle, unknown in its nature and inappreciable by the senses, which is the agent for the transmission of infectious diseases. Thus we speak of the variolic, the vaccine, and the syphilitic viruses. Virus differs from venom in the latter being a secretion natural to certain animals, while the former is the result of a morbid process—a morbid poison. **V., atten'uated,** virus reduced or diluted in such way as to diminish its pathogenic force without depriving it of its power as a protective against disease. **V., i'chor,** poison; sanies. **V., vac'cine,** see *Vaccina.* **V. vita'le,** sperm.

Vis (allied to **Vir,** man). Force. **V. adhæsio'nis,** cohesion, force of. **V. attractio'nis,** cohesion, force of. **V. auc'ta,** sthenia. **V. cohæsio'nis,** cohesion, force of. **V. conserva'trix,** V. medicatrix naturæ. **V. elas'tica,** elasticity. **V. essentia'lis,** plastic force. **V. expul'trix,** organic force by which, it was supposed, useless effete materials were removed from the body. **V. formati'va,** plastic force. **V. fron'te** (force from the front), an action exerted from before, as that of the capillaries in the circulation of the blood. **V. genera'trix,** generative power. **V. imminu'ta,** asthenia. **V. iner'tiæ,** inertia. **V. in'sita,** irritability. **V. irritabilita'tis,** irritability. **V. medica'trix natu'ræ,** instinctive healing power in an animal or vegetable, by virtue of which it can repair injuries inflicted upon it or remove disease. **V. menta'lis,** mental power. **V. metabol'ica,** metabolic force. **V. mor'tua,** term to include mechanical properties of membrane—flexibility, extensibility, elasticity, etc. —which are totally independent of the vital properties. They remain some time after the complete extinction of life in all its functions, and seem to be connected with the mechanical arrangement of particles and the chemical composition of the substances in which they reside. **V. muscula'ris,** muscular power. **V. nervo'rum,** nervous power. **V. nervo'sa,** nervous power. **V. plas'tica,** plastic force. **V. reproducti'va,** plastic force. **V. ter'go** (force from behind), an action of impulsion or propulsion, as that of the heart in the circulation of the blood. **V. vi'tæ,** vital force. **V. vita'lis,** force distinguishing living matter from dead; also irritability. **V. zo'tica,** vis vitalis.

Viscago (vis-kah'go) **behen** (*viscum,* bird-lime). Cucubalus behen.

Viscera, vis'ser-ah. Entrails; uterus; contents of the abdomen. Internal organs of the body.

Vis'ceral. Splanchnic. **V. arches** and **clefts,** four narrow elongated apertures in lateral wall of cervical portion of embryo, separated by thickenings of the wall itself; in fishes they permanently remain during life. **V. cav'ity,** one of the two great cavities which may be said to be enclosed in the arrangement of the segments of the skeleton; see *Neural cavity.* **V. hypochondri'asis** or **mel'ancholy,** delusions connected with the abdominal organs, as dread of obstruction of the bowels, etc. **V. plates,** the lateral parts of the middle layer of the embryo lying beyond the chorda dorsalis, afterward uniting to form the mesial plate. **V. por'tion of the pericar'dium,** that portion of the pericardial sac which is closely attached to the heart and commencement of the great vessels at the base of the heart. **V. skel'eton,** those parts forming the hæmal arches—viz. sternum, ribs, and costal cartilages.

Visceral'gia (*viscus, algos,* pain). Pain in the viscera.

Viscera'lis. Splanchnic; stomachal; visceral.

Viscera'tion. Exenterismus.

Vis'cid (*viscum,* bird-lime or bird-glue). Sticky; adhesive; used to denote semiliquid, glue-like material.

Viscid'ity or **Viscos'ity.** Possessing viscid properties.

Vis'cin (*viscum,* bird-lime). A viscid, glutinous substance in mistletoe, Viscum flavescens, and other species of plants.

Viscoid, vis'koid. Relating to or resembling birdlime; also pertaining to or resembling mistletoe.

Visconia, vis-ko'ne-ah. Physconia.

Vis'cose. A glue-like material secreted or produced by the micrococcus viscosus.

Vis'cous. Gluey; sticky; viscid.

Vis'cum. *Mistletoe.* A parasitic plant growing on a number of trees; ord. Loranthaceæ. That of the oak, viscum quercinum, has been most celebrated, but it does not differ from the others. It was at one time much used in epilepsy and other neuroses, the wood or leaves being given in powder. The berries, from their supposed virtues, are drastic, and when applied externally are maturative. **V. al'bum,** mistletoe, consisting of a small evergreen parasitic shrub growing in Europe on various trees. **V. Capen'se,** S. African parasitic shrub growing on the stems of several species of Rhus and Euclea. **V. flaves'cens,** *Yellow* or *Yellowish mistletoe,* indigenous, has been given in the same cases as viscum album. **V. verticilla'tum,** V. flavescens.

Viscus, vis'kus. Any internal organ of the body. See *Viscera.*

Visibil'ity (*video, visum,* to see). Term applied to anything capable of being seen.

Visio, viz'e-o. Pupil; vision.

Vision, vizh'un (*video, visum,* to see). *Sight.* The

action of seeing. The sight is one of the five senses, and the eye is its organ. By it we distinguish colors and appreciate most of the physical qualities of external objects. The eye is composed of different transparent media, whose curvatures and refractive powers are so combined as to render insensible the aberrations of sphericity and refrangibility, and to concentrate the numerous rays proceeding from more or less distant objects. These rays traverse, successively, the transparent cornea, the aqueous humor, the crystalline, and the vitreous humor, striking upon the retina, on which they impress the figure of the object whence they have proceeded; and, in order that no obscurity may arise from the reflections, which might otherwise occur, the anterior of the eye is lined by a membrane—the choroid—which is itself covered internally by a dark pigment. This absorbs the light, like the dark pigment in the interior of telescopes, and thus obviates confusion. **V., binoc'ular,** see *Binocular.* **V., cen'tral,** when image is formed upon the macula lutea. **V. for col'or,** chromatic visual sense. **V., col'ored,** chromopsia. **V., defec'tive** or **depraved',** dysopsia. **V., dichro'mic,** dichromism; achromatopsia. **V., direct',** perception from image formed at macula lutea. **V., distort'ed,** metamorphopsia. **V., doub'le,** diplopia. **V., field of,** the limit of indirect vision when the visual axis is fixed upon one point. **V. for form,** acuity of vision with white light. **V., indirect',** perception from image formed at other points on the retina than the macula lutea. **V., irides'cent,** chromopsia. **V., man'ifold,** polyopsia. **V., mul'tiple,** polyopsia. **V., periph'eral,** when image is formed upon the retina peripherally, and not upon the macula lutea. **V., pur'ple,** see *Rhodopsin.* **V., sin'gle,** see *Binocular.* **V., treb'le,** triplopia.

Vismia Guianensis, vis'me-ah gi-an-en'sis (after Visme, merchant-botanist of Lisbon). Hypericum Guianense. **V. longifo'lia,** small tree, native of Brazil; a yellow, purgative resin is obtained from it.

Visnomy, vis'no-me. Physiognomy.

Visorium organum, vis-o're-um or'gan-um (*video, visum,* to see). The eye.

Viso'rius. Visual.

Visual, vizh'u-al. Concerning the sight or belonging to vision. **V. an'gle,** the angle formed by the crossing of two rays, proceeding from opposite points of any body, in their passage from the pupil. It is by the size of this angle that we judge, to a certain extent, of the dimensions of objects. **V. mem'ory,** memory by objects seen in the mind's eye of the insane. **V. rays,** lines of light proceeding from any object to the eye.

Visus, ve'zus (*video, visum,* to see). Vision. **V. ac'rior,** nyctalopia. **V. ac'ris,** sharpness of vision. **V. bre'vior,** myopia. **V. colora'tus,** chromopsia. **V. debil'itas,** asthenopia. **V. decol'or,** achromatopsia. **V. defigura'tus,** metamorphopsia. **V. dimidia'tus,** hemiopia. **V. diur'nus,** hemeralopia. **K. duplica'tus,** diplopia. **V. hebetu'do,** amblyopia. **V. juve'num,** myopia. **V. lon'gior,** presbytia. **V. lu'cidus,** photopsia. **V. musca'rum,** see *Metamorphopsia.* **V. nebulo'sus,** nebula. **V. noctur'nus,** nyctalopia. **V. phantas'matum,** metamorphopsia. **V. reticula'tus,** perception of muscæ volitantes in shape of fine or coarse network. **V. seni'lis,** presbytia. **V. trip'lex,** triplopia.

Vita, ve'tah. Life. **V. pro'pria,** irritability.

Vitaceæ, vit-as'se-e. A natural order of plants abounding in mild and warm zones of both hemispheres, of which the most important member is the *Vitis* or grapevine.

Vi'tal (*vita,* life). Relating or appertaining to life. **V. air,** term sometimes applied to oxygen gas. **V. capac'ity,** *Pulmonic* or *Lung* or *Breathing capacity;* a term employed by Dr. Hutchinson to designate the number of cubic inches of air which a person can forcibly expire after a full inspiration. He found that for every inch of height—from five feet to six—eight additional cubic inches of air can be given out by a forced expiration. The quantity, however, is influenced also by weight and age. See *Respiration.* The average vital capacity for the male adult (Englishman) is 3770 (Hutchinson); the estimate for the Continent is less, about 3200 (Rosenthal); women, 2500. In middle life, at 35, the vital capacity reaches its maximum and then decreases. Between 50–60 years great variations occur, so that no regularity can be established (Wintrich). **V. cen'tre,** see *Centrum vitale.* **V. dynam'ics,** see *Dynamic.* **V. force,** vis vitalis. **V. func'tions,** see *Function.* **V. point,** see *Centrum vitale.* **V. prin'ciple,** *Vital flame;* the unknown principle which, in association with matter, as in organized bodies, controls its manifestations and properties, and distinguishes organized matter from the inorganic. **V. prop'erties,** see *Properties.* **V. statis'tics,** statistics, medical. **V. vor'tex,** life.

Vital'ba (*vitis,* vine, *albus,* white). Clematis vitalba.

Vitalism, vi'tal-ism (*vita,* life). The doctrine of the vitalist, who ascribes every function of the organism to the direct agency of a vital principle or force.

Vi'talist. See *Vitalism.*

Vital'ity. Vital principle or force. Vital action or movement. It is said to be dormant when the actions or movements of an organized body are so obscure as not to be perceptible unless under circumstances favorable for their manifestation.

Vitalize, vi'tal-ize. To give life to any part or body.

Vi'tals. Parts that are necessary for life—the heart, lungs, and nervous centres more especially.

Vitel'lary. Vitelline. **V. mem'brane,** zona pellucida.

Vitellif'erous (*vitellus,* yolk of egg, *fero,* to bear). Having or possessing a vitellus.

Vitel'lin. A natural proteid belonging to the Globulins. Principal proteid contained in yolk of egg, resembling casein.

Vitel'line (*vitellus,* the yolk of an egg). *Vitellary.* Appertaining to or resembling the vitellus or yolk. Also the yolk membrane. A modification of albumen found in the yolk of egg. See *Vesicula umbilicalis.* **V. apoph'ysis,** see *V. pedicle.* **V. cav'ity,** latebra. **V. disk,** proligerous disk. **V. duct,** see *Vesicula umbilicalis.* **V. fu'id,** see *Vesicula umbilicalis.* **V. ped'icle,** the pedicle attaching the umbilical vesicle to the embryo; see *Vesicula umbilicalis.* **V. pouch,** vesicula umbilicalis. **V. sac,** the sac containing the yolk. **V. veins,** omphalomesenteric veins. **V. ves'sels,** see *Omphalomesenteric.*

Vitellinus, vit-el-le'nus (*vitellus*). Term used to denote deep or reddish-yellow color, the color of the yolk.

Vitellomesenter'ic. Omphalomesenteric.

Vitello'ses. Products formed by action of gastric, pancreatic, and intestinal juices upon phytovitellin.

Vitel'lum o'vi. The yolk of an egg. See *Ovum.*

Vitel'lus formati'vus. Germinal yolk; formative yolk. **V. nutriti'vus,** nutritive yolk. **V. o'vi,** see *Ovum.*

Vi'tex. The chaste tree. The seeds, when fresh, have a fragrant smell and an acrid, aromatic taste. Formerly they were celebrated as antaphrodisiacs.

Vi'ti sal'tus. St. Vitus's dance; chorea.

Vitia (pl. of **Vitium**) **primæ conformationis,** vish'e-ah pre'me kon-for-mah-she-o'nis. See *Monster.*

Vitia'tio (*vitio,* to violate). Violation. See *Stuprum.*

Vitiation, vish-e-a'shun (*vitio,* to make foul). The corruption or contamination of anything; especially applied to air and water. Violation.

Viticula, vit-ik'u-lah. A trailing vine or stem.

Viticulose, vit-ik'u-lose. Term applied to plants possessing trailing vines or stems.

Vitilig'ines (pl. of **Vitiligo**). Ephelides; lineæ albicantes.

Vitiligo, vit-il-e'go (*vitulus,* a calf, hence calfskin). Achroma; herpes exedens; lepra; porrigo decalvans. **V. al'ba gra'vior,** lepra maculosa. **V. al'ba le'vior,** V. alphos. **V. al'phus,** lepra alphoïdes. **V. cap'itis,** alopecia areata. **V. congenita'lis,** incomplete albinism. **V. gra'vior,** lepra. **V. hepat'ica,** chloasma hepaticum. **V. me'las,** lepra nigricans. **V. ni'gra,** lepra nigricans.

Vitil'igoid (*vitiligo, eidos*). Like or resembling vitiligo.

Vitiligoi'dea (*vitiligo, eidos*, resemblance). A disease of the skin, so called from resembling the vitiligo of Willan. It appears under two forms: either as tubercles—V. tuberosa—varying from the size of a pin's head to that of a large pea, isolated or confluent; or as yellow patches of irregular outline, slightly elevated and with but little hardness—V. plana.

Vi'tis al'ba sylves'tris. Bryonia alba. **V. apyr'ena,** see *V. Corinthiaca.* **V. cordifo'lia,** a vine-like shrub indigenous to United States; frost-grape. **V. Corinthi'aca,** ord. Vitaceæ; this plant affords currants, the dried fruit of Corinthiaca or Vitis apyrena, and are similar in their properties to raisins. **V. idæ'a myrtil'lus,** Vaccinium myrtillus. **V. idæ'a palus'tris,** Vaccinium oxycoccos. **V. idæ'a puncta'ta,** Vaccinium vitis idæa. **V. labrus'ca,** Northern fox-grape; indigenous; by cultivation the Concord and Catawba varieties have been produced from it. **V. sati'va,** V. vinifera. **V. vinif'era,** *Grapevine, Vine;* vine, leaves, and tendrils have an astringent taste; formerly used in diarrhœa, hemorrhage, etc. The juice or sap, called lacryma, has been recommended in calculous disorders and in cases of chronic ophthalmia. The juice of the unripe fruit is called verjuice. The grape, when ripe, is a wholesome, delicious fruit, and when dried forms the *Uvæ passæ majores, U. sole siccatæ, Uva passa* (Ph. U. S.), *Uvæ* (Ph. Br.), *Raisins.* These are subacidulous, sweet, and mucilaginous, and are demulcent and nutritive. **V. vulpi'na,** Southern fox-grape, native of Southern United States; muscadine. These grapes are large, purple, and have the odor of musk somewhat.

Vitium, vish'e-um. Disease. **V. cadu'cum,** epilepsy. **V. conformatio'nis,** a disease or fault of conformation. **V. divi'num,** epilepsy. **V. hercule'um,** epilepsy. **V. scrophulo'sum,** scrofula.

Vitraria, vit-rah're-ah. Parietaria.

Vitreocapsulitis, vit-re-o-kap-su-le'tis (*vitreo,* appertaining to vitreous humor, *capsulitis,* inflammation of the capsule). Hyalitis.

Vitreous, vit're-us (*vitrum*). Hyaline. **V., artific'ial,** a glass globule inserted by certain operators after evisceration of the eye to preserve the form of the eyeball. **V. bod'y,** corpus vitreum. **V. cham'ber,** see *Chamber.* **V. degenera'tion,** atheroma or disease of the innermost coat of arteries. **V. hu'mor,** corpus vitreum. **V. hu'mor of the ear,** endolymph. **V. infiltra'tion,** small degenerative patches of inner layer of choroid, impinging upon a perforating retina. On ophthalmoscopic examination they appear as minute pinkish or yellowish patches. **V. ta'ble of the skull,** see *Table.*

Vitreus, vit're-us. Hyaline.

Vitrifac'tion. Vitrification.

Vitrification, vit-re-fik-a'shun (*vitrum,* glass, *facio,* to make). The conversion of mineral materials into glass; vitrefying or changing into glass.

Vitrina auditoria, vit-re'nah aud-i-to're-ah. Endolymph. **V. ocula'ris,** fluid draining away from the vitreous body when placed upon a filter.

Vitrine auditive, vit'reen o-dit-eve (Fr.). *Endolymph, Liquor* or *Fluid of Scarpa, Vitreous humor of the ear.* The fluid contained in the membranous labyrinth of the ear, so called from its resemblance to the vitreous humor of the eye.

Vitriol, vit're-ol (*vitrum,* glass). Ferri sulphas. **V., ac'id of,** sulphuric acid. **V., blue,** cupri sulphas. **V., green,** ferri sulphas. **V., oil of,** old term for sulphuric acid. **V., Ro'man,** cupri sulphas. **V., white,** zinci sulphas.

Vit'riolated so'da. Sulphate of sodium. **V. tar'tar,** sulphate of potassium.

Vitriolic (vit-re-ol'ik) **ac'id.** Sulphuric acid.

Vitriolum album, vit-re'o-lum al'bum. Zinci sulphas. **V. ammoniaca'le,** ammonii sulphas. **V. cæru'leum,** cupri sulphas. **V. cu'pri,** cupri sulphas. **V. cyp'rium,** cupri sulphas. **V. fer'ri,** ferri sulphas. **V. Goslarien'se,** zinci sulphas. **V. mar'tis,** ferri sulphas. **V. Roman'um,** cupri sulphas. **V. ven'eris,** cupri sulphas. **V. vir'ide,** ferri sulphas. **V. zin'ci,** zinci sulphas.

Vitrodentine, vit-ro-den'teen (*vitrum, dens,* tooth). The superficial layer of the true dentine in fishes, taking the place of the enamel.

Vitrosus, vit-ro'sus. Vitreous.

Vit'rum. *Glass.* Glass coarsely powdered has been sometimes used to remove specks of the cornea. The saline scum which swims on glass when first made has been used in tooth-powders; it is called *Sandiver, Glass gall, Fel ventri,* etc. **V. antimo'nii,** see *Antimonii vitrum.* **V. hypoclep'ticum,** a surgical instrument for separating the pericranium from the skull. **V. ocula're,** see *Spectacles.* **V. sublimato'rium,** aludel.

Vit'ta. Bandelette; caul.

Vittaria ceterach, vit-tah're-ah set'er-ak (*vitta,* a band, a fillet). Asplenium ceterach.

Vit'tie vayr. Andropogon muricatus.

Vit'ulary fe'ver. *Parturient apoplexy; Parturient fever.* A fatal disease occurring in connection with parturition in cows, characterized by tendency to congestion of the brain, apoplexy, etc.

Vi'tus's dance, St. Chorea.

Vivacious, viv-a'shus. Having a lively, animated disposition; tenacious regarding life, capable of longevity; botanically, perennial.

Vivarium, viv-ah're-um. Aquarium.

Viver'ra civet'ta. See *Civetta.* **V. zibe'thi,** zibeth of Southern Asia; produces some of the civet of commerce.

Vivianite, viv'e-an-ite. Hydrous iron phosphate, occurring in deep-blue or green crystals.

Vivip'arous (*vivus,* alive, *pario,* to bring forth). An epithet applied to animals whose young are brought forth detached, without requiring to be hatched, as in the oviparous. The condition may be termed viviparous. See *Generation.*

Viviparousness, vi-vip'ar-us-ness. See *Viviparous.*

Vivipa'tion. That mode of generation in which the ovum on leaving the ovary attaches itself to the maternal organs and thus develops until the time of birth.

Vivisectio, viv-e-sek'she-o (*vivus,* alive, *seco,* to cut). Vivisection.

Vivisection, viv-e-sek'shun (*vivus,* alive, *seco,* to cut). The act of opening or dissecting living animals; one who performs vivisections is a *Vivisector.*

Vleminckx (vlem'inks), **solu'tion of.** See *Calcis sulphuretum.*

Vo-and'zeia subterra'nea. A creeping herb of Africa, cultivated for its seeds and pods, which are used as food.

Vo'cal (*vox, vocis,* voice). Oral. **V. cords,** see *Cords, vocal.* **V. frem'itus,** see *Fremitus.* **V. lig'aments,** see *Cords, vocal.* **V. tube,** see *Tube, vocal.*

Voca'lis. Vocal. Vowel.

Vociferatio, vo-sif-er-ah'she-o. Exercise of the voice; vociferation.

Vogt, an'gle of. Angle included between the alveolo-nasal and nasobasilar lines.

Voice (*voco,* to call). An appreciable sound produced by the air when it is driven from the lungs, throwing the inferior ligaments of the glottis into vibration. The function by which this is effected has been called phonation. It is a function of animal life, and in other animals than man is limited to the production of the simple or instinctive voice, as it is in the idiot; but in intellectual man it becomes much more complicated and articulated, an evidence of his intellectual superiority. **V., artic'ulated,** *Speech;* voice produced by the glottis, modified by the motions of the tongue, lips, and other parts of the vocal tube. Most physiologists agree in regarding the glottis, or the space between the thyreo-arytenoid ligaments plus the ligaments themselves, as the part where vocal sounds are formed. The glottis and its ligaments with the vocal tube, or the space which the sound has to traverse after it is produced in the glottis, is regarded as a reed instrument like the clarionet, the inferior ligaments of the glottis constituting the reed. In speech, as ordinarily effected, the tongue, lips,

teeth, etc. are concerned, but it has been accomplished after the tongue has been removed. In such cases the articulated voice must have been produced in the glottis alone, or in it aided by an obscure action of the parts above it. The singing voice is not limited to the larynx; the pharynx would seem to be concerned also. The notes produced in the latter have been termed supralaryngeal, or notes of the second register. They constitute the pharyngeal voice, falsetto or faucette voice. The laryngeal voice, or voice of the first register, chest voice, is the *Voce di petto* (I.), *Voix de poitrine* (Fr.). The laryngeal voice, which is always more elevated, by an octave, in the female than in the male, furnishes types called soprano, alto or contralto, tenore, and basso. The first two belong to the female voice; the last two to the male. The baritone is between the bass and tenor. **V., bleat'ing**, egophony. **V., cav'ernous**, pectoriloquy. **V., chest**, see *Voice, articulated*. **V., chol'eric**, peculiar husky voice of those affected with cholera. **V., convul'sive**, neurosis of the voice, consisting in the production of discordant sounds—acute and grave—which cannot be brought to the natural tones by any act of volition. It seems to be caused by disordered contraction of the muscles of the larynx. **V., falset'to**, see *Voice*. **V., goat's**, egophony. **V., laryngeal**, laryngophony; see *Voice*. **V., pharyngeal**, see *Voice*. **V., trache'al**, laryngophony.

Vo'la. Palm. **V. ma'nūs**, palm. **V. pe'dis**, sole.

Vo'lar (*vola*, the palm). Relating to the palm of the hand.

Volatica, vo-lat'ik-ah (*volo*, to fly). Lichen.

Vol'atile. Term applied to any substance evaporating quickly. **V. al'kali**, ammonia. **V. lin'iment**, ammonia liniment. **V. oil**, volatile principle existing in organic and inorganic nature, found in cells or free upon the surface of various flowers and plants. It is soluble in alcohol, and is split up into stearopten and elæopten by cold. **V. oil of mus'tard**, a very pungent oil made by macerating black mustard with water and subsequent distillation of the liquid. **V. salt**, carbonate of ammonia.

Volatilization, vol-a-til-i-za'shun (*volo*, to fly). Operation of reducing volatilizable substances into gas or vapor.

Volatisatio, vol-at-iz-ah'she-o (*volo*, to fly). Volatilization.

Volition, vo-lish'un (*volo*, to will). The act of willing.

Volitional, vo-lish'un-al. Relating to volition. Thus, muscles may be moved by a volitional or by an emotional impulse.

Volk'mann's canals. Vascular canals of cortical layers of bone having no surrounding Haversian system.

Vol'nus. Wound.

Volsel'la (*vello*, to pluck). Forceps; tweezers for extracting hairs.

Volt. Unit of measurement of electro-motive force. **V. am'père**, the quantity of pressure attained by an ampère current with electro-motor force of one volt. It equals 44.2 foot-pounds per minute. **V. bat'tery**, the galvanic battery. **V. electric'ity**, galvanic electricity. **V. pile**, the primitive galvanic battery, consisting of zinc and copper plates, each pair separated by flannel moistened with strong salt solution. These were piled one upon the other; hence the name.

Voltaic, vol-ta'ik (aftar Volta, Italian scientist). Relating to voltaism. **V. arc**, the arc of light at the junction of carbons in the arc light.

Voltaism, vol'tah-izm. Galvanism.

Voltam'eter. Instrument originally invented by Faraday for registering the strength of electrical currents by means of observing the degree of chemical reaction produced. Thus, the water voltameter measures the volume of hydrogen and oxygen generated by electrolysis of water, while Edison's voltameter registers the amount of copper going from anode to cathode during the activity of the current. The latter instrument has also been termed a Coulombmeter.

Volta's laws. I. The difference of potential between any two metals equals the sum of differences of potentials between intervening metals in a contact series. II. The total electro-motive force of a series of cells arranged as a galvanic battery equals the electro-motive force of one cell multiplied by the number of cells.

Volt'meter. The instrument for measuring the strength of the current between any two points in a voltaic circuit, the strength being registered in volts. It is simply a galvanometer of high resistance. Also termed potential galvanometer.

Voltolini's (vol-to-le'ne's) **disease'.** A disease of childhood characterized by acute cerebral symptoms and followed by deafness.

Vol'tus. Countenance; face.

Vol'uble (*volvo*, to roll). Botanically, a spiral twisting around anything.

Vol'ume. Space occupied by any substance; the cubic measurement of anything. Gases combine with each other in definite volumes; that is, in simple proportion of their volumes. Thus, one volume of a certain gas will combine chemically with one, two, three, etc. times its own volume, and in no other proportion.

Volumetric, vol-u-met'rik (*volume*, *metron*, measure). Relating to the measurement of volumes, as the volumetric method of analysis for the urine, the principle of which consists in adding to a known quantity of urine the exact amount of a test liquid required to precipitate the whole of any one ingredient contained in it. It is frequently employed for the determination of the chlorine, urea, phosphoric and sulphuric acids, and sugar of the urine.

Voluntary, vol'un-ta-re (*voluntas*, will). Relating to the will, as voluntary muscles—muscles which act in obedience to the will and produce voluntary movements.

Volun'tas (*volo*, to will). Will or desire. **V. deseden'di**, desire to go to stool.

Volute' (*volvo*, to roll). Term applied to anything convoluted or rolled up.

Vol'va. Vulva.

Vol'vate. Pertaining to or possessing a vulva.

Volvulus, vol'vu-lus (*volvo*, to roll). Ileus. **V. intestino'rum**, intussusception.

Vomen'di cona'men ina'ne (vain effort at vomiting). Vomiturition.

Vo'mer (ploughshare). *Ploughshare bone.* One of the facial bones, so called from its resemblance. It is an azygous bone forming the posterior part of the septum narium. It is thin, flat, and quadrilateral; articulated, below, to the superior maxillary and palatine bones; above, to the sphenoid, ethmoid, and cornets of Bertin. Also the penis.

Vomerine, vom'er-een. Pertaining to the vomer.

Vomica, vom'ik-ah (*vomo*, to vomit, to cast up.) Term used by some authors for any encysted collection of purulent matter in the interior of a viscus. It is commonly, however, restricted to a purulent collection in the lungs, encysted or not, which may be discharged by the mouth, by breaking into the bronchial tubes. Two kinds are distinguished: one caused by the softening or breaking down of pulmonary tubercles; the other, more rare, by a circumscribed abscess of the lungs. Instead of opening into the bronchia, the abscess is sometimes discharged into the pleural cavity, causing empyema.

Vomicene, vom'is-een. Brucine.

Vom'icus (same etymon). Relating to vomiting. Used also in the same sense as vomica. See *Vomica*.

Vom'it (*vomo*, to vomit). Emetic. **V., black**, fever, yellow; melæna. **V., dry, of Mar'riott**, a once-celebrated emetic, called dry from its having been given without solution. It consisted of equal portions of tartrate of antimony and potassium and copper sulphate.

Vomitine, vom'it-een. Emetine.

Vom'iting. *Spewing, Puking, Sickness of the stomach* (although the latter expression may mean nausea only). Act by which solids and liquids contained in the

stomach are ejected by the mouth. Vomiting is the effect of some special irritation of the gastric nerves, calling, by reflex action, on the appropriate muscles to expel the contents of the stomach. It is not accomplished solely by the contraction of the stomach, as was for a long time believed. That organ, indeed, assists, but the main cause is the compression exerted upon the parietes of the stomach by the diaphragm and abdominal muscles. Vomiting is at times sympathetic, as in affections of the kidney, uterus, brain, etc.; at others symptomatic, as in gastritis, peritonitis, etc. When very troublesome it may often be palliated by effervescent draughts, aromatics, sinapisms, or blisters to the epigastric region, etc. **V. of blood**, hæmatemesis. **V. at pleas'ure**, regurgitation. **V., stercora'ceous**, vomiting of fæces.

Vomitio, vom-ish'e-o. Vomiting. **V. san'guinis**, vomiting of blood; see *Hæmatemesis*.

Vomition, vom-ish'un. Vomiting.

Vomitium, vom-ish'e-um. Vomiting.

Vomito nigro, vom'it-o ne'gro. Black vomit. Also yellow fever.

Vomitorium, vom-it-o're-um. Emetic.

Vom'itory. Emetic.

Vom'itum. Vomiting.

Vomiturition, vom-it-u-rish'un. *Retching, Reaching, Heaving.* Reversal of action of the stomach, leading to ineffectual efforts to vomit. Some authors usually mean by this term a vomiting of but little matter; sometimes that which is effected almost without effort.

Vomitus, vom'it-us (*vomo, vomitum*, to vomit). Vomiting. **V. cruen'tus**, vomiting of blood. **V. fæculen'tus**, vomiting of fecal matter. **V. mari'nus**, sea-sickness. **V. navigan'tium**, sea-sickness. **V. ni'ger**, yellow fever. **V. pituito'sus**, vomiting of mucus. **V. profu'sus**, hyperemesis. **V. purulen'tus**, vomiting of purulent matter. **V. san'guinis**, vomiting of blood. **V. stercora'ceus** or **ster'coris**, vomiting of fecal matter.

Voora'ra. Curare.

Voracity (vo-ras'it-e) or **Voraciousness**, vo-ra'shusness. Greed for food. Boulimia.

Vor'tex of the heart. A peculiar arrangement of the superficial muscular fibres of the ventricle, consisting of a coiling inward at the apex of the heart, around which they are arranged in a whorl-like form or vortex. **V., vi'tal** (vital whirlpool), life.

Vortices lentes, vor'tis-ees len'tees. A penniform or whorled appearance presented by the peculiar arrangement of the radiated fibres of the crystalline lens.

Vo'tive tab'let (*votum*, vow). A tablet hung up as an offering in the ancient temples by the sick, descriptive of their diseases and mode of cure, or by those who had been preserved from some calamity.

Vouacapou'a America'na. Geoffrea inermis.

Vow'el (*vox*, voice). Physiologically, a continuous breath or sound, produced in the glottis, but more or less modified by the form of the vocal tube, through which it has to pass. In the English language *a, e, i, o, u, w*, and *y* are vowels.

Vox. Voice. **V. abscis'sa**, aphonia. **V. choler'ica**, voice, choleric. **V. clandesti'na**, whispering. **V. clango'sa**, shrill and squalling voice, as in some affections of the larynx. **V. nasa'lis**, speaking through the nose. **V. rau'ca**, raucedo, raucous voice. **V. rauciso'na**, raucous voice.

Voy'ra. Genus of herbs belonging to the Gentianaceæ, growing in tropical America. **V. ro'sea**, species cultivated in Guiana for the roots, which are cooked and eaten like potatoes.

Vulcanite (vul'kan-ite), **den'tal** (*Vulcan*, god of fire). A compound of caoutchouc and sulphur or sulphur compounds, used in the formation of plates for artificial teeth, etc. The formation of vulcanite is termed *Vulcanization.*

Vulcaniza'tion. The formation of vulcanite by means of adding sulphur to caoutchouc under the influence of heat.

Vul'canized caout'chouc. A variety of caoutchouc used in the manufacture of surgical appliances. It is prepared by combining sulphur with ordinary caoutchouc under the action of heat. It is thus made less liable to the action of liquids, and also preserves its elasticity under changes of temperature to a much greater extent than the ordinary article.

Vulcanizer, vul'kan-i-zur. Name of apparatus used in vulcanization.

Vul'canizing. Vulcanization.

Vulg. Abbreviation for *Vulgariter*, meaning commonly.

Vul'ga. Vulva.

Vulga'ris (*vulgus*, common people). Commonplace; vulgar; ordinary.

Vulnera sclopetaria, vul'ner-ah sklop-et-ah're-ah (pl. of **Vulnus** and **Sclopetum**, gun). See *Sclopetarius* and *Wound.* **V. sclopet'ica**, see *Sclopetarius* and *Wound.* **V. à sclope'tis**, see *Sclopetarius* and *Wound.*

Vulnera'ria a'qua. Any lotion assisting the healing of a wound.

Vulnerarius, vul-ner-ah're-us. Traumatic.

Vulnerary, vul'ner-a-re (*vulnus*, wound). Relating to a wound. *Traumatic.* A name applied by the ancients to medicines or plants which they considered capable of favoring the consolidation of wounds.

Vulneratio nervi, vul-ner-ah'she-o ner've (*vulnero*, to wound). Wounding of a nerve.

Vul'nerum vinctura, vink-tu'rah. Binding of wounds. Deligation.

Vul'nus. Wound. **V. lacera'tum**, see *Laceration.* **V. sclopeta'rium**, wound, gunshot. **V. sclopet'icum**, wound, gunshot. **V. sim'plex**, cut.

Vulnusculum, vul-nus'ku-lum (dim. of **Vulnus**). Wound.

Vul'pis mor'bus (disease of the fox). Alopecia.

Vulsel'lum for'ceps (*vello*, to pluck). See *Forceps* (vulsellum).

Vul'tus. Countenance; face. **V. tetri'cus et mœstus**, of a gloomy, depressed countenance, of bad augury in serious diseases.

Vul'va. *Female pudendum, Female organs of generation, Female parts, Shape.* A longitudinal opening between the projecting parts of the external organs of generation in the female, extending from the mons veneris to the perineum; called, also, fossa magna. Some anatomists mean by this term the whole of the external genital organs of the female; that is, mons veneris, labia majora, and the cleft or vestibule separating them, the clitoris, nymphæ, meatus urinarius, entrance of the vagina, with the hymen or the carunculæ myrtiformes, fossa navicularis, and fourchette. Also the uterus, especially of animals. **V. cer'ebri**, an opening at the junction of the optic thalami in the third ventricle of the brain and immediately beneath the anterior crus of the fornix.

Vul'var. Relating to the vulva. The external pudic arteries are so called because they are distributed to the vulva. **V. her'nia**, pudendal hernia.

Vulvaria, vul-vah're-ah. Chenopodium vulvaria.

Vulvismus, vul-viz'mus. Vaginismus.

Vulvitis, vul-ve'tis (*vulva, itis*). Inflammation of the vulva. **V. blennorrhag'ica**, profuse mucopurulent discharge from the vulvar mucous membrane.

Vulvo-uterine, vul'vo-u'ter-in. Relating or appertaining to the vulva and uterus. **V.-u. canal'**, vagina.

Vulvovagi'nal. Relating or appertaining to the vulva and vagina. **V. glands**, Cowper's glands in the female.

W.

Wa'bran or **Way'bread.** Plantago.

Wach'endorf's mem'brane. Membrane of the pupil of the eye of the fœtus, which undergoes atrophy about the seventh month of fœtal life.

Wad. Graphites.

Wa'fer ash or **tree.** Ptelea trifoliata.

Wag'ner, cor'puscles of. Corpuscula tactûs. **W., ves'icles of,** see *Molecule.*

Wagne'rian spot. See *Molecule.*

Wahoo'. See *Euonymus.*

Wair. See *Pila marina.*

Waist'coat, strait. A dress used for restraining maniacs or those laboring under violent delirium. It has long sleeves, which are tied behind the body, so that the arms cannot be extricated from them. It ought, of course, to be made of very resisting materials.

Wake'fulness. Insomnia.

Wake'robin. Arum maculatum; Trillium latifolium.

Wal'cheren fever. Form of remittent fever at one time prevalent in Walcheren, the most western of the islands of the Netherlands.

Walida. Wrightia antidysenterica.

Walk'ing. The action by which we change place by means of a succession of steps in the same direction. In walking forward the centre of gravity is constantly altered, and a series of small parabolic curves is described on the heads of the thigh-bones, the extent of which is regulated by volition under the guidance of vision.

Walle'rian degenera'tion. The degeneration which nerves undergo after separation from their trophic centres. **W. law of degenera'tion,** a nerve on being separated from its trophic centre degenerates in the direction in which it normally carries impulses.

Wall'eyed. Applied to a horse not perfectly white or cream-colored which has a white iris. Also applied to eyes having gray or white irises or leucoma of the cornea.

Wall'flower. Cheiranthus cheiri.

Wall-pel'litory. An herb, Parietaria officinalis; has diuretic and refrigerant virtues.

Wall'pepper. Sedum acre, common in the Eastern States.

Wall'rue. Asplenium ruta muraria.

Wall'teeth. Molar teeth.

Wal'nut. Juglans regia. **W., black,** Juglans regia. **W. oil,** see *Aleurites triloba.* **W. oil, Span'ish,** see *Aleurites triloba.* **W., white,** Juglans cinerea.

Wal'ther, an'gle of. Angle between lines drawn from forehead to root of nose, and through occipital protuberance and crista galli to intersect the first. **W., duct of,** see *Sublingual gland.*

Walthe'ria America'na (after A. F. Walther, medical professor at Leipsic). Native of Surinam having doubtful febrifuge properties. **W. douradin'ha,** a plant of Brazil, ord. Sterculiaceæ, used in diseases of the chest and in venereal affections. It is a demulcent.

Wam'bles. An old name for milk-sickness.

Wampee. Peltandra Virginica.

Wan'dering cells. See *Amœboid.*

Wang. The cheek. **W. teeth,** molar teeth.

Want. Imperious necessity which impels us to take food, drink, etc. See *Hunger* and *Thirst.* In a more general sense the impression transmitted by the organs to the brain when it is necessary that they should act. Such wants are called instinctive desires and internal sensations or stimuli. Such are the desires or wants to eat, drink, void the urine, breathe, etc. Want, in the sense of indigence, is the cause of a number of diseases, especially if it leads to filthy habits or is attended with exposure.

War'burg's fe'ver-drops. See *Bebeeru.* **W.'s tinc'ture,** see *Bebeeru.*

Ward-car'riage. An appliance used in hospitals to conveniently convey water, instruments, surgical dressings, etc. from place to place, by means of the wheels with which it is provided.

War'drop's disease. Malignant onyx. **W.'s opera'tion,** distal ligature of an artery for aneurism.

Ward's paste. Confection of black pepper.

Ware. See *Pila marina.*

Warm-blood'ed. Term applied to animals which have a normal uniform temperature regardless of their environment. Such animals have double circulation, pulmonic and systemic.

Warm'ing plas'ter. Emplastrum calefaciens.

Warne'ria Canaden'sis (after Mr. Richard Warner of Woodford, England). Hydrastis Canadensis.

War'rus, War'us, Wars, or **Vars.** Synonyms for kamala. Also an African or Arabian drug used as a tæniacide and dye.

Wart. Verruca. **W., cor'neous,** see *Cornu.* **W., fig,** ficus. **W., moist,** see *Acrothymion.* **W. pock** or **pox,** a term sometimes employed for varicella verrucosa. **W., post-mor'tem,** see *Verruca necrogenica.*

Warts of the a'nus. See *Condyloma.*

Wart'y. Full of warts. Resembling, relating, or belonging to warts. **W. tu'mor of cica'trices,** tumor which sometimes appears on an old scar, many years perhaps after the injury that caused it. The ulcer formed under such circumstances has been called the *warty ulcer of Marjolin,* having been well described by that surgeon.

Wash, black. See *Hydrargyri bichloridum.* **W., phageden'ic,** see *Hydrargyri submurias.* **W., red,** lotio rubra. **W., white,** liquor plumbi subacetatis dilutus. **W., yellow,** see *Hydrargyri oxymurias.*

Washed sul'phur. Sublimed sulphur mixed with dilute ammonia-water for two or three days, then washed with water and dried; *Sulphur lotum* (Ph. U. S.).

Wash'erwoman's scall or **itch.** See *Psoriasis.*

Wash'ing so'da. Impure sodium carbonate.

Wash-leath'er skin. A condition of system in some diseases, in which certain metals, particularly silver, produce a black line when drawn over the surface of the skin. This is said to occur in erysipelas, diseases of the kidney, phthisis, and hemiplegia, and is supposed to be dependent upon an abnormal condition of trophic or secretory nervous mechanism.

Wasp. A genus of gregarious insects, like the bee and ant, armed with a sting, which pours a poisonous fluid into the puncture made by it. See *Poisons* (table of). The best application is the spiritus ammoniæ aromaticus or some preparation of ammonia.

Wast'ing. Consumption; tabes. **W. pal'sy,** progressive muscular atrophy.

Watch'fulness. Sleeplessness or wakefulness.

Watch'ing. Insomnia; coma vigil.

Wa'ter. *Protoxide of hydrogen.* Water was at one time regarded as a simple element. It consists, however, of eight parts by weight of oxygen and one of hydrogen. It freezes at 32°, boils at 212° Fah., and is taken as the unit in all tables of specific gravity of solid and liquid substances. Water, as we meet with it, generally contains small quantities of saline matter; at other times, as in sea-water and mineral waters, it is largely impregnated. When cold, and especially when iced, it is one of the most useful refrigerants, and in the form of the cold, tepid, and warm bath it is serviceable in numerous diseases. See *Aqua, Eau, Bath,* and *Liquor;* also *Urine.* In adding water as an ingredient in prescriptions, care should be taken to mention distilled water whenever it is desirable to have the water perfectly pure, as in eye-washes.

The amount of water in various parts of the human body has been tabulated as follows:

Substance.	*Parts per 1000.*
Enamel	2
Epithelium	37
Teeth	100
Bones	130
Tendons	500
Cartilages	550
Skin	575
Liver	618
Muscles	725
Ligaments	768
Blood	780
Milk	887
Chyle	904
Bile	905
Urine	933
Lymph	960
Saliva	983
Gastric juice	984
Perspiration	986
Tears	990
Pulmonary vapor	997

Wat'er, acid'ulous, sim'ple, see *Acidulous water, simple.* **W., all'flower,** urine, cow's. **W. of ammo'nia, strong'er,** see *Liquor ammoniæ.* **W., an'gel,** angel water. **W., an'ise,** see *Pimpinella anisum.* **W. ap'ple,** apple-tree. **W. a'rum,** Calla palustris. **W. ash,** Fraxinus sambucifolius. **W. a'vens,** Geum rivale. **W., bar'ley,** decoctum hordei. **W. bath,** see *Bath, water.* **W. bed,** hydrostatic bed, invented by Arnott and used for paralytics and other bedridden cases. **W., Binel'li,** aqua Binelli. **W. of bit'ter almonds,** aqua amygdalarum concentrata. **W. blebs,** pemphigus. **W. on the brain,** hydrocephalus. **W. brash,** pyrosis. **W. brax'y,** bloody effusion into peritoneal cavity of sheep, with tendency to coagulation in the circulating apparatus. **W., Brocchie'ri,** aqua Brocchierii. **W. cal'aminth,** Mentha arvensis. **W., cam'phor,** mistura camphoræ. **W. can'cer,** cancer aquaticus. **W. can'ker,** cancrum oris. **W., car'away,** see *Carum carui.* **W., car'away, strong,** spiritus carui. **W., carbol'ic ac'id,** see *Carbolic acid.* **W. of car'bonate of ammo'nium,** liquor ammoniæ subcarbonatis. **W., Car'melite,** see *Melissa.* **W. of cas'sia,** see *Laurus cassia.* **W. cas'ter,** see *Uromantia.* **W., cher'ry-lau'rel,** see *Prunus laurocerasus.* **W., chick'en,** chicken-tea. **W., chlo'rine,** see *Chlorine.* **W., cin'namon,** aqua cinnamomi. **W., cin'namon, strong,** spiritus cinnamomi. **W. clos'et,** a contrivance for the reception of human excreta, consisting of a round or oval hollow basin, into which, after use, a volume of water is poured by a mechanical arrangement, thus removing contents into cesspool or sewer. **W. coil,** coiled rubber or tin tubing transmitting water of desired temperature, and employed as a topical application. **W., Cologne,** eau de Cologne. **W., cre'asote,** see *Creasote.* **W. cress,** Sisymbrium nasturtium. **W. of crystalliza'tion,** the water contained in chemical combination in crystals of the various salts, and without which they could not retain their physical constitution. **W. cup,** Sarracenia purpurea. **W. cure,** hydrosudotherapeia. **W. dill,** Anethum graveolens. **W., distilled,** *Holy water,* is generally ordered in extemporaneous prescriptions, but is rarely used. In some cases, however, it is absolutely necessary, the water containing any saline impregnation—hard water, for example—decomposing certain substances. *Distilled waters* consist of common water charged by distillation with the volatile principles of medicinal agents. See *Aquæ destillatæ.* **W. dock,** Rumex aquaticus. **W. doc'tor,** see *Uromantia.* **W. dress'ing,** treatment of ulcers and wounds by applications of water. It usually consists in dipping folds of lint in water and placing them on a part, the whole being covered with oiled silk, elastic gum, or spongiopiline. *Water-strapping* or *wet-strapping* means treatment of ulcers and certain cutaneous affections of the extremities, etc. with strips of linen or cotton saturated with water. **W. drop'wort,** Ænanthe crocata. **W. el'der,** see *Sambucus.* **W. far'cy,** disease of horses; lymphangitis of the leg. **W., fen'nel,** aqua fœniculi. **W. flag,** Iris pseudacorus; I. versicolor. **W., flor'ida,** a celebrated perfume; may be made of ol. bergami, f℥iv; tinct. benzoin. comp., f℥ij; alcohol., cong. **W. fright,** hydrophobia. **W. german'der,** Teucrium scordium. **W., Gou'lard,** liquor plumbi subacetatis dilutus. **W. gru'el,** see *Avena* and *Grits.* **W., hard,** common water, which decomposes and curdles soap, in contradistinction to *soft water,* which is readily miscible with soap. The hardness of water depends upon the presence in it of earthy salts, the most common of which is sulphate of calcium. **W. of the head,** hydrocephalus. **W., hell,** see *Toddy.* **W. hem'lock,** Cicuta aquatica. **W., ho'ly,** distilled water. **W., hon'ey,** see *Mel.* **W. hore'hound,** Lycopus Europeus. **W., Hun'gary,** spiritus rosmarini. **W. jags,** see *Varicella.* **W. knob'weed,** Polygonium amphibium. **W., lake,** is apt to be impure from decayed animal and vegetable matters. A great deal will, however, depend upon the magnitude of the lake and the degree of stagnation. **W., lau'rel,** see *Prunus laurocerasus.* **W., lav'ender,** spiritus lavandulæ. **W., lead,** liquor plumbi subacetatis dilutus. **W., lem'on-peel,** see *Lemon-peel tea.* **W. lil'y,** Nymphea odorata. **W., lime,** liquor calcis. **W., lime, com'pound,** liquor calcis compositus. **W., lith'ia, a'ërated,** see *Lithium, carbonate of.* **W., magne'sia, a'ërated,** magnesia, fluid. **W., magne'sia, car'bonated,** magnesia, fluid. **W., marsh,** is the most impure of all. It is generally stagnant and loaded with decomposing animal and vegetable matters. **W., med'icated,** see *Aquæ medicatæ.* **W., min'eral,** water holding in solution different saline and gaseous substances in sufficient quantity to be possessed of medicinal properties, or of a temperature different from that of the ordinary springs of the country. Mineral waters may be divided into four classes: 1. *Gaseous* or *Acidulous.* 2. *Chalybeate* or *Ferruginous.* 3. *Saline.* 4. *Sulphureous.* These may be thermal or cold, natural or artificial. Many of these divisions, however, run into each other, some of the substances which they hold dissolved belonging to one class as well as to others. Other classifications of a more minute character have been suggested:

1. *Gaseous, Acidulous,* or *Carbonated mineral waters, Soda* or *Beer springs.* The waters referred to this class are those that contain carbonic acid gas in such quantity as to communicate to them certain sensible qualities. Waters impregnated with free carbonic acid sparkle when drawn from the spring or when poured into a glass. They have a sharp, acidulous taste, but become vapid from exposure to the air. Along with the carbonic acid there are generally present portions of saline, earthy, or metallic matter, chiefly carbonates of calicum, magnesium, and iron. Waters highly impregnated with carbonic acid gas are grateful to the stomach, increase the appetite, and are diuretic, hence their utility in dyspepsia, hypochondriasis, and gout. Their properties are, of course, modified by the saline matter that may be also contained in them.

2. *Chalybeate* or *Ferruginous mineral waters.* These contain iron—sulphate, chloride, or carbonate, generally the latter—held in solution by an excess of acid. Chalybeate waters have a peculiar styptic taste. They are transparent when taken from the spring, but when exposed for some time to the air a pellicle forms on the surface and a deposit of the iron takes place. Chalybeate waters are used as tonics in debility of all kinds—in all cases, in fact, where iron is considered to be indicated. They are the most numerous of all the classes of mineral waters.

3. *Saline mineral waters.* Waters holding in solution different saline substances in greater quantity than the acidulous waters. The salts usually present are sulphates, chlorides, and carbonates, and the bases with which the acids forming these are combined are soda, magnesia, and lime. Saline mineral waters are usually aperient. To this class may also be added *Sea-water.*

4. *Sulphureous mineral waters.* These waters owe their distinguishing character to an impregnation

of sulphuretted hydrogen, and are at once recognized by their peculiar fetid smell, resembling that of rotten eggs. They usually contain saline substances which modify their powers. From the action of the hydrogen they are useful in cutaneous affections; and from the combined action of this and the saline matter they are valuable agents in diseases of the digestive organs. They are also employed in cutaneous eruptions, and the warm sulphur baths have been especially celebrated in such cases, as well as in rheumatic affections. *Thermal mineral waters* are valuable agents in rheumatic affections, the warmth being equable during the whole period the individual is immersed in them, which cannot be the case in the artificial thermal bath. *Artificial mineral waters* are imitations of the natural, and some of them answer the purposes of the natural water tolerably well. The acidulous and chalybeate waters are, however, most easily imitated. See *Acidulous water, simple.*

Water mint. Mentha aquatica. **W., nut'meg,** spiritus myristicæ. **W., or'ange-flow'er,** see *Citrus aurantium.* **W., ox'ygenated,** hydrogen peroxide. **W. pang,** pyrosis. **W. pars'neps, creep'ing,** sium. **W. pars'nip,** Sium latifolium. **W., pennyroy'al, spir'ituous,** spiritus pulegii. **W. pep'per,** Polygonum hydropiper. **W., pep'permint,** aqua menthæ piperitæ. **W., pimen'to,** see *Myrtus pimenta.* **W. plan'tain,** Alisma plantajo, rhizome of which has been used in various affections, while the leaves have been given internally for renal and cystic calculi, and applied exterually in fomentations. **W., pot'ash,** liquor potassæ effervescens. **W. pox,** see *Varicella.* **W., protox'ide of ni'trogen,** aquæ nitrogenii protoxidi. **W. pur'ple,** Veronica beccabunga. **W. purs'lane,** Ludingia palustris. **W. qualm,** pyrosis. **W. rad'ish,** Sisymbrium nasturtium. **W., rain,** when collected at a distance from houses and other elevated objects it is the purest natural water and has the least specific gravity. The only bodies which it usually holds in solution are carbonic acid and minute traces of carbonate of calcium and chloride of calcium. **W., rice,** see *Oryza.* **W., riv'er,** is derived from the conflux of numerous springs and rain-water; it is tolerably pure. **W., rose,** aqua rosæ. **W., sea,** this contains chlorides of sodium, magnesium, and potassium, bromide of magnesium, sulphate of calcium, carbonate of calcium, and sulphate of magnesium. It is cathartic, and forms the usual glyster at sea. It makes an excellent tonic bath, superior in most cases, especially in scrofula, to the fresh-water bath. **W., Sed'litz** or **Seid'litz,** Sedlitz water. **W., Seyd'schütz,** Sedlitz water. **W. sham'rock,** Menyanthes trifoliata. **W. shield,** Brasenia hydropeltis; B. peltata. **W. smart'weed,** Polygonum acre. **W., snow,** has usually been deemed unwholesome; it exactly resembles rain-water in composition, and is equally salubrious. **W., so'da,** acidulous water, simple. **W., soft,** see *Water, hard.* **W., spear'mint,** aqua menthæ viridis. **W., spring,** contains, in addition to the substances detected in rain-water, more or less sulphate of calcium. When this is to such an extent as to curdle soap, the water is said to be hard; if not, soft. Hard water is, of course, inferior to soft for domestic and medicinal purposes. **W. star'nut,** Callitriche verna. **W. strap'ping,** see *W. dressing.* **W. stroke,** see *Hydrocephalus internus.* **W., styp'tic, Syd'enham's,** solutio sulphatis cupri composita. **W., tar,** see *Pinus sylvestris.* **W. tar'get,** Brasenia hydropeltis. **W., toast,** see *Toast-water.* **W. tomes,** an old name for pyrosis. **W., ven'om-glob'ulin,** name applied by Mitchell and Reichert to a globulin gotten from venom of serpents by diluting it with water and precipitating. **W., well,** is the same as spring-water, but liable to impregnation, owing to the land springs filtering into the wells and conveying impurities into them.

Water-ham'mer pulse. See *Corrigan pulse.*

Wa'ters, The. Liquor amnii. **W., bag of,** see *Liquor amnii.* **W., bro'ken** or **discharged,** discharge or breaking of the waters at birth. **W., distilled,** aquæ destillatæ. **W., first,** first waters, or waters discharged before the extrusion of the fœtus. **W., green,** see *Lochia.*

Wa'tery eye. Epiphora.

Watt (from James Watt, 1736–1819). Synonym for volt-ampère; unit of electrical force. 1 watt equals $\frac{1}{9.81}$ kilogrammemetres, which represents $\frac{1}{746}$ horsepower.

Wat'tle-bark. Bark of an Australian tree, the Acacia decurrens. Also applied to bark of other Australian species of Acacia.

Wat'tle-gum. A gum obtained from Australia.

Wa'vellite. A mineral form of hydrated phosphate of aluminum, named after Dr. Wavel.

Wax. Cera. **W., ear,** cerumen. **W., Japan',** from Rhus succedanea of Japan. It is of a medium quality between beeswax and the ordinary vegetable tallows. **W. ker'nels,** enlarged submaxillary glands are popularly so called. **W., myr'tle,** *Bayberry tallow;* a wax from the fruit of Myrica cerifera. *Wax myrtle, Candleberry myrtle;* indigenous plant which yields the bayberry bark; tonic, stimulant, and astringent, and prescribed in dysentery. **W., veg'etable,** see *Cera flava.* **W., white,** cera alba. **W., yel'low,** cera flava.

Waxed sponge. Sponge impregnated with wax and then compressed; used in surgery.

Wax'ing ker'nels. *Waxenkernels.* A popular term for small tumors formed by the enlargement of the lymphatic glands—in the groins of children particularly. They have been looked upon as connected with the growth of the body, hence their name. See *Wax.*

Wax-work. Celastrus scandens.

Wax'y degenera'tion. See *Lardaceous.* **W. liv'er,** see *Lardaceous.* **W. spleen,** see *Lardaceous.*

Way. Canal.

Way'bread. Plantago major.

Ways, diges'tive. The series of hollow organs of digestion, composed of the mouth, œsophagus, stomach, and small and large intestines, especially the first three of these. **W., second,** *Second passages.* These comprise the chyliferous vessels, the lymphatics, and the blood-vessels.

Weak. Physically debilitated. Infirm. **W. of mind,** mentally defective, even if not positively insane.

Weak'ness. Debility. **W., spi'nal,** see *Spinal.*

Weak-sight'edness. Asthenopia.

Wean'ing. Act of depriving the infant permanently of the breast, in order to feed it on other and more solid nourishment. **W. brash,** see *Brash.*

Wear'ing. Consumption.

Weas'and. Trachea.

Weath'ercocks. Impatiens.

Weav'er's bot'tom. Chronic inflammation of a bursa over the tuberosity of the ischium, occasionally observed in weavers, due to pressure on the part.

Web. Caligo; pterygium. **W., mus'cular,** panniculus carnosus.

Webbed fin'gers. Union of the fingers with each other, usually congenital, but sometimes owing to burns, ulcerations, etc.

We'ber. Ampère. See *Unit.*

Webe'rian cor'puscle (after Weber, a German anatomist). See *Ejaculatory ducts.* **W. or'gan,** see *Ejaculatory ducts.*

We'ber's exper'iment. The vibrations of a tuning-fork placed upon the vortex are heard better when the ear is closed. **W.'s glands,** mucus-secreting glands of the tongue. **W.'s law,** a law proposed first by Heinrich Weber, professor of anatomy and physiology at Leipsic, and subsequently extended and elaborated by Fechner. This law is that the intensity of a sensation varies in a constant ratio with the logarithm of the stimulus producing the sensation. **W.'s par'adox,** when a muscle is overloaded, so that contraction is impossible, it may elongate.

Web'eye. Caligo; pterygium.

Web'ster's conden'ser. Appliance furnished with a lower convex lens and an upper achromatic lens, for the purpose of condensing light on microscopic specimens.

Wedged. The head of the fœtus is said to be wedged, locked, or impacted in the pelvis when it remains fixed, notwithstanding the uterine efforts.

Weed. See *Mastitis* and *Ephemera, puerperal.* **W., ar'row,** Sagittaria variabilis. **W., bee'tle,** Galax aphylla. **W., breast,** Saururus cernuus. **W. in the breast,** see *Mastitis.* **W., but'ter,** Erigeron Canadense. **W., can'cer,** Goodyera pubescens. **W., dy'er's,** Reseda luteola. **W., field,** Anthemis cotula. **W., horse,** Erigeron Canadense. **W., horse'fly,** Sophora tinctoria. **W., milk,** Apocynum androsæmifolium. **W., phthi'sis,** Ludwigia palustris. **W., pride,** Erigeron Canadense. **W., red,** Phytolacca decandra. **W., sil'ver,** Potentilla anserina. **W., sol'dier's,** matico. **W., thim'ble,** Rudbeckia laciniata. **W., wind,** Asclepias tuberosa.

Weep'ing. Lacrymation or excretion and effusion of tears. **W. tear,** tear.

Wee'sel. Trachea.

Weige'la. Genus of shrubs belonging to the Caprifoliaceæ, growing in Japan and China; cultivated for the sake of ornamentation.

Weight. A sensation of heaviness or pressure over the whole body or over a part—the stomach or head, for example. **W. of body** or **or'gans,** the average weight of the body has been estimated (Vierordt) at 65 kilogrammes in men; in women about 55 kilogrammes. The weight of the body of new-born children, on an average, in middle Europe, is as follows: general average, 3250 g.—boys, 3333 g.; girls, 3200; a twin weighs, on an average, 2501 g., the average weight of a male twin being 2554 g., of female twin, 2425 g. The average weight of each organ in the adult is, according to Quain, as follows:

Heart, male	11	ounces.
" female	9	"
Brain, male	49½	"
" female	44	"
Spinal cord	1 to 1¾	"
Liver	50 to 60	"
Pancreas	2½ to 3½	"
Spleen	5 to 7	"
Lungs, male	45	"
" female	32	"
Thyroid cartilage	1 to 2	"
Thymus (at birth)	½	"
Kidney	4½	"
Suprarenal capsules	2	drachms.
Prostate	6	"
Testes	¾ to 1	ounce.
Unimpregnated uterus	7 to 12	drachms.

Detailed estimates of the weights and measurements of the various organs are also given under each organ. See also *Man.*

Weights and Meas'ures. The importance of possessing a uniform system of weights and measures has impressed the scientific of all countries, and numerous endeavors have been made to accomplish the object. It is, however, a matter of considerable difficulty, and one not likely to be attained. The more modern French measures are upon decidedly the best footing, but they are not yet generally adopted. The greatest diversity, indeed, prevails in the measures both of weight and capacity. Some of the following tables will show that every subdivision of the pound, as well as the pound itself, differs in England and in France:

Weights (Ph. U. S.).

Troy Weight.

The weights employed by physicians and apothecaries in the United States in prescribing and dispensing medicines are those derived from the troy pound. The scale is as follows:

One Pound,	℔ = 12 Ounces	= 5760 Grains.
One Ounce,	℥ = 8 Drachms	= 480 "
One Drachm,	ʒ = 3 Scruples	= 60 "
One Scruple,	℈	= 20 "
One Grain,	gr.	= 1 "

This table may be differently stated as follows:

Lb.		*Oz.*		*Drachms.*		*Scrup.*		*Grs.*
1	=	12	=	96	=	288	=	5760
		1	=	8	=	24	=	480
				1	=	3	=	60
						1	=	20

Measures of Capacity (Ph. U. S.).

One Gallon (Congius),	C. = 8 Pints	= 61,440 M. = 231	cu. in.
One Pint (Octarius),	O. = 16 Fluidounces	= 7,680 M. = 28.875	"
One Fluidounce,	f℥ = 8 Fluidrachms	= 480 M. = 1.8047	"
One Fluidrachm,	f ʒ	= 60 M. = .2256.	"
One Minim,	♏		

The following are the weights and measures of the British Pharmacopœia, with their symbols:

Weights. (Ph. Br.).

Avoirdupois Weight.

Pound.		*Ounces.*		*Drachms.*		*Troy grains.*
1	=	16	=	256	=	7000
		1	=	16	=	437.5
				1	=	27.34375

Relative Value of Troy and Avoirdupois Weights.

1 pound troy	= 0.822857 avoirdupois	or 0 ℔ 13 oz. 72.5 gr.
1 avoirdupois	= 1.215277 troy	or 1 ℔ 2 oz. 280 gr.

The pound of 7680 grains avoirdupois = 7000 grains troy, and hence 1 grain troy = .97 grains avoirdupois.

Imperial Measures of Capacity (Ph. Br.).

1 Gallon, C. = 8 Pints = 160 Fluidounces = 1280 Fluidrachms = 76,800 Minims.
1 Pint, O. = 20 Fluidounces = 160 Fluidrachms = 9600 Minims.
1 Fluidounce, fl. oz. = 8 Fluidrachms = 480 Minims.
1 Fluidrachm, fl. dr. = 60 Minims.
1 Minim, ♏.

Measures of Length (Ph. Br.).

1 Line = $\frac{1}{12}$ inch.
1 Inch = $\frac{39}{39.1393}$ seconds pendulum.
12 Inches = 1 foot.
36 " = 3 feet = 1 yard.
Length of pendulum vibrating seconds of mean time in the latitude of London, in a vacuum at the level of the sea . . . . = 39.1393 inches.

Relation of Measure to Weights (Ph. Br.).

	Grs. of water.
1 Minim is the measure of	0.91
1 Fluidrachm is the measure of	54.68
1 Fluidounce " "	1 oz. or 437.5
1 Pint " "	1.25 ℔s. or 8750
1 Gallon " "	10 ℔s. or 70,000

The measures in the Ph. U. S. have the same names in the British, but their value is different, the pint weighing 16 oz. 291.2 grs. avoirdupois, and the fluidounce 455.7 grs. In the formulæ the acids and the oils are ordered by weight; other liquids by measure. The gallon is not used, that measure being always expressed in pints. In Continental Europe all medicines are weighed, and the gramme is becoming universally used.

Poids de Marc.

The *Poids de Marc* is that employed by the French *pharmaciens* when the new weights are not:

One Pound One Ounce One Drachm One Scruple One Grain	contains	16 Ounces. 8 Drachms. 3 Scruples. 24 Grains.

(For the relative values of the old French and English weights, see p. 1168.)

Weights and Measures of the Metrical System.

The French metrical or metric system of weights and measures is decimal and founded on the metre, which is the *unit of length,* based on the measurement of the quadrant of a meridian of the earth. The *unit of surface* is the *are,* which is the square of 10 metres. The *unit of capacity* is the *litre,* the cube of $\frac{1}{10}$ of a metre. The *unit of weight* is the *gramme,* the weight of distilled water, of maximum density, which fills a cube of $\frac{1}{100}$ of a metre. Multiples of each of these are expressed by *deka* or *deca,* ten, as decagramme; *hecto,* a hundred, as hectolitre; *kilo,* a thousand, as kilometre, etc. Fractional quantities are de-

noted by *deci*, one-tenth, as decigramme; *centi*, one-hundredth, as centimetre; *milli*, one-thousandth, as millilitre, etc.

Measures of Length (Metrical System).

One Myriametre = 10,000 Metres.
One Kilometre = 1,000 Metres.
One Hectometre = 100 Metres.
One Decametre = 10 Metres.
One Metre = The ten-millionth part of a quarter of the meridian of the earth.
One Decimetre = The tenth part of one Metre, or 0.1 Metre.
One Centimetre = The hundredth part of one Metre, or 0.01 Metre.
One Millimetre = The thousandth part of one Metre, or 0.001 Metre.

The value of these measures may be expressed in the ordinary scale of measures in use in the United States and England as follows:

	English inches.		*yd.*	*ft.*	*inch.*
Myriametre	393710.	=	10936.	1.	2.
Kilometre	39371·	=	1093.	1.	10.
Hectometre	3937.1	=	109.	1.	1.
Decametre	393.71	=	10.	2.	9.7
Metre	39.371	=	1.	0.	3.37
Decimetre	3.937				
Centimetre	0.393				
Millimetre	0.039				

Weights (Metrical System).

One Myriagramme = 10,000 Grammes.
One Kilogramme = 1,000 Grammes.
One Hectogramme = 100 Grammes.
One Decagramme = 10 Grammes.
One Gramme = The weight of a cubic Centimetre of water at 4° C.
One Decigramme = The tenth part of one Gramme, or 0.1 Gramme.
One Centigramme = The hundredth part of one Gramme, or 0.01 Gramme.
One Milligramme = The thousandth part of one Gramme, or 0.001 Gramme.

The value of these weights may be expressed in the troy scale as follows:

	Troy grains.		*lb.*	*oz.*	*dr.*	*gr.*
Myriagramme	154340.2344	=	26	9	6	0
Kilogramme	15434.0234	=	2	8	1	24
Hectogramme	1543.4023	=	0	3	1	44.4
Decagramme	154.3402	=	0	0	2	34.4
Gramme	15.4340					
Decigramme	1.5434					
Centigramme	.1543					
Milligramme	.0154					

Measures of Capacity (Metrical System).

One Myrialitre = 10 cubic Metres, or the measure of 10 Milliers of water.
One Kilolitre = 1 cubic Metre, or the measure of 1 Millier of water.
One Hectolitre = 100 cubic Decimetres, or the measure of 1 Quintal of water.
One Decalitre = 10 cubic Decimetres, or the measure of 1 Myriagramme of water.
One Litre = 1 cubic Decimetre, or the measure of 1 Kilogramme of water.
One Decilitre = 100 cubic Centimetres, or the measure of 1 Hectogramme of water.
One Centilitre = 10 cubic Centimetres, or the measure of 1 Decagramme of water.
One Millilitre = 1 cubic Centimetre, or the meusure of 1 Gramme of water.

The following tables, from the U. S. Phar. and British Phar., give an accurate view of the relations between the weights and measures adopted by them and those of the metrical system, to which are added many items of statistical interest in connection with this subject:

Relation of Measures of the U. S. Pharmacopœia to Cubic Measure.

One Gallon	=	231.0	Cubic Inches.
One Pint	=	28.875	Cubic Inches.
One Fluidounce	=	1.80468	Cubic Inches.
One Fluidrachm	=	0.22558	Cubic Inch.
One Minim	=	0.00375	Cubic Inch.

Relation of Weights and Measures of U. S. Pharmacopœia to each other.

In distilled water at the temperature of 60°.

To convert French grains into Troy, divide by . . . 1.2189
" Troy grains into French, multiply by . . 1.2189
" French ounces into Troy, divide by . . . 1.015734
" Troy ounces into French, multiply by . 1.015734
" French pounds (*poids de marc*) into Troy, multiply by 1.31268
" Troy pounds into French, divide by . . 1.31268

The *French medicinal pound* (*Livre médicinal*) of the same scale has a value of three-fourths of the *poid de marc*, or 6612 French grains, equivalent to 5670.5 troy grains. The *poids de marc* was in use prior to the Revolution of 1789, and was succeeded by the decimal system. In 1812 the old pound was made equal to half a kilogramme—500 grains—and this was taken as the unit. The French grain then became equivalent to .8365 troy grain or .0542 gramme. This modification was not made absolute until 1827, but so much confusion resulted that the decimal system was in 1837 made obligatory.

Table of Continental Medicinal Weights in Troy Grains.

The missohaos weighed	3	8	1	33
Aben, kirt, ejub, eberia, or Roman mina	1	6	0	00
The phial, haffilius, or hassitinus		10	1	18
The calix or rejelati		6	0	44
The handful, pugillum, cornusum		3	2	68
The hassuf, aesasse, or anesime		2	4	20
The conos or coatus, alcantus or almunesi, briale cuabus		1	5	34
The lesser bachates			5	56
The largest spoonful			4	44
A spoonful			1	52
The colanos or reclanarium			1	28
A small spoonful or flagerina or cyanes			1	11
The smallest spoonful or fahaliel				42

A good section on weights and measures is contained in the edition of "The Seven Books of Paulus Ægineta," by Mr. Francis Adams, published by the Sydenham Society of London, vol. iii. p. 609, London, 1847.

Approximate Weights and Measures.

Besides the weights and measures above mentioned employed by the moderns, there are modes of estimating the quantities of substances by approximation. For example:

A glassful or cupful ([F.] *verre*) is reckoned to contain 4 or 5 fluidounces.
A wineglassful, 1½ ounces or 2 fluidounces.
A tablespoonful ([F.] *cuiller à bouche*), about half a fluidounce.
A coffee or dessertspoonful, about 2 fluidrachms.
A teaspoonful, a fluidrachm.
A handful, manipulus ([F.] *poignée*), as much as can be held in the hand.
The pugillus ([F.] *pincée*), as much as can be held by the three fingers.

These last quantities are occasionally prescribed by the French practitioners. Their weights must, of course, vary according to the article. The authors of the Parisian Codex have valued them, as regards certain substances:

	French. oz.	dr.
A manipulus of barley weighs	3	2½
" linseed	1	4
" linseed meal	3	3
" dried mallow leaves	1	3
" dried chicory leaves	1	0
" dried flowers of the tilia	1	2½
	dr.	**gr.**
A pugillus of chamomile flowers weighs	2	
" arnica	1	48
" marshmallow	1	24
" mallow		60
" fennel seeds	1	60
" aniseed	1	12

Weil's disease'. An acute infectious febrile affection, characterized by a distinct fever range of eight or ten days' duration, jaundice with enlarged liver and spleen, persistent headache, and frequently complicated by acute nephritis. The mortality is small, and recovery is usually rapid and complete. This disease may be mistaken for typhoid fever.

Weit'brecht, car'tilage of. Interarticular cartilage of clavicular-acromial articulation. **W., lig'ament of,** ligament of Weitbrecht; oblique ligament.

Wel'come-to-our-house. Euphorbia cyparissias.

Weld. Reseda luteola.

Welk (like **Wheal**). *Whelk.* An inequality; a protuberance; a cutaneous eruption of this character; acne.

Wellingto'nia gigante'a. Sequoia gigantea, according to English botanists.

Wells's fa'cies. Ovarian facies.

Wen. Encysted sebaceous tumor, affecting chiefly the scalp and face; single or multiple.

Werl'hoff's disease'. Purpura hæmorrhagica.

West African pep'per. Ashantee pepper. **W. In'dian ki'no,** kino from Jamaica. **W. I. molas'ses,** the residue from manufacture of raw sugar.

West'brook's opera'tion. Cardicentesis or puncturation of the heart.

West'ern mug'wort. *Artemisia Ludoviciana.* Employed by Western Indians to arrest uterine contraction in labor and to stop hemorrhage.

West'phal's nu'cleus. Small gray nucleus situate beneath the Sylvian aqueduct near the median line. It is connected with the oculomotor nuclei. It is supposed to give origin to the fibres which supply the sphincter pupillæ muscles. **W.'s sign** or **symp'tom,** absence of knee-jerk or patellar reflex in locomotor ataxia.

Wet-brain. Excessive serosity of the brain or its membranes, as observed in delirium tremens, general paralysis, etc.

Wet-nurse. A woman suckling the child of another, in contradistinction to dry-nurse, who does not suckle infants.

Wet-pack. The enveloping of a patient in wet sheets covered by dry woollen blankets; used to control fever.

Wet-strap'ping. See *Water-dressing.*

Weyl's test. A test for kreatinin. A few drops of a slightly-brownish solution of sodium nitroprusside is added to the urine, followed by dilute sodium hydrate solution, which gives the mixture a red color, disappearing in a few minutes. When this mixture is heated with glacial acetic acid, if kreatinin be present, a green color changing to blue is produced.

Whahoo, whah-hoo. See *Euonymus.*

Wharto'nian jel'ly. Gelatin or jelly of Wharton. Name applied to mucous tissue of umbilical cord.

Wharton's duct (after Dr. Thomas Wharton, an English anatomist). Excretory duct of the submaxillary gland. **W.'s jel'ly,** see *Whartonian.*

Wheal. *Weal, Wale.* Ridge or elevation of the skin produced by a rod or whip, or as if produced in that manner. Such elevations are seen in urticaria.

Wheal'worm. Acorus autumnalis, or harvest-bug; A. scabiei.

Wheat. Triticum. **W., In'dian,** Zea mays. **W. phos'phates,** organized phosphates of the bran—usually discarded—are said to assist assimilation. **W., Tur'key,** Zea mays.

Wheel'house's opera'tion. A method of external urethrotomy in which the urethra is opened on a grooved staff in front of the stricture, which is then divided and dilated with appropriate instruments.

Wheeze. To breathe with difficulty and noise, as in asthma.

Wheez'ing. Form of respiration observed in asthma, croup, coryza, and certain forms of bronchitis.

Whelk (*wheal*). Acne; welk. **W., chin,** sycosis. **W., ro'sy,** gutta rosea.

Whet'tlebones. Vertebræ.

Whey. Serum lactis. **W. cure,** in the Kursaal of many German watering-places a space is set apart for whey-drinkers. Whey is a pleasant diluent, and the saccharine matter it contains may act as a eutrophic, but the main effect on the valetudinarian is probably produced by the new impressions made upon him by his visit to the watering-place. **W., mus'tard,** see *Sinapis.* **W., ren'net** see *Serum lactis.* **W. sack,** wine-whey. **W., tam'arind,** see *Tamarindus.* **W., vin'egar,** see *Acetum.* **W., wine,** see *Wine-whey.*

Whick'flaw. Whitlow.

Whiff'ing mur'mur. See *Murmur, respiratory.*

Whim'berry. Vaccinium myrtillus.

Whip'tongue. Gallium mollugo.

Whip'worm. Trichocephalus dispar.

Whirl'ing chair. See *Chair.*

Whis'key. See *Spirit.* **W. liv'er,** see *Liver, nutmeg.* **W. nose,** acne rosacea.

Whis'per, cav'ernous. See *Cavernous.*

Whis'pering. An example of onomatopœia. Articulation of the air sent through the vocal tube without any action of the glottis. **W. souf'fle,** see *Souffle.*

Whist'ling. See *Râle, sibilant.*

White ag'aric. A fungus, *Polyporus officinalis,*

used as a cathartic, and in small doses for night-sweats of phthisis. **W. al'der**, Clethra alnifolia. **W. ar'senic**, ordinary arsenious acid. **W. ash**, Fraxinus Americana. **W. at'rophy of the op'tic nerve**, form of atrophy due to some disease beyond the eye, as of cerebral origin. **W. a'vens**, Geum Virginianum. **W. ball**, Cephalanthus occidentalis. **W. bal'sam**, that obtained from fruit of Myroxylon Pereiræ by expression, coming chiefly from San Salvador; also Gnaphalium polycephalum. **W. bay**, Magnolia glauca. **W. bis'muth**, subnitrate of bismuth. **W. blis'ters**, rupia escharotica. **W. bole**, a silicate of aluminum found in nature; contains a trace of iron. Possesses absorbent and astringent properties. **W. ce'dar**, variety of cedar. **W. clo'ver**, Trifolium repens. **W. co'hosh**, Actæa alba. **W. col'umns**, white columns of spinal cord. **W. com'missure**, anterior portion of spinal commissure, also called anterior commissure. **W. cream of tar'tar**, see *Potassii supertartras*. **W. dit'tany**, Dictamnus albus. **W. of egg**, albumen ovi. **W. elm**, Ulmus Americana. **W. flag**, Florentine orris. **W. flake**, plumbi subcarbonas. **W. flux**, of India, diarrhœa alba or chylosa. **W. galls**, the nutgalls procured after the escape of the fly; they are inferior to black galls. **W. gin'ger**, a species of ginger; see *Ginger*. **W. gum**, Lichen strophulus. **W. hel'lebore**, Veratrum album; rhizome is used in medicine. It is an exceedingly violent emetic and cathartic; externally is employed as a parasiticide. **W. ipecacuan'ha**, root of Richardsonia scabra of Brazil. **W. lead**, plumbi carbonas. **W. leaf**, Pyrola maculata; Spiræa tomentosa. **W. leg**, phlegmatia dolens. **W. let'tuce**, Prenanthus albus. **W. lily**, the bulbs and flowers of Lilium album. Bulbs are used as a poultice, and an oily infusion of the flowers is also employed locally. **W. line of pel'vic fas'cia**, white line extending from the pubis to the spine of the ischium, aponeurotic in nature, situate on inner surface of obturator internus muscle, and marking the origin of the levator ani and rectovesical fascia. **W. lu'pine**, Lupinus albus. **W. mat'ter of the brain**, see *Cerebrum*. **W. mel'ilot**, Melilotus albus. **W. mus'tard**, Sinapis alba; seed is employed in medicine as emetic, counter-irritant, and stimulant. **W. oak bark**, bark of Quercus alba. **W. pep'per**, ripe fruit of Piper nigrum; rarely used. **W. Peru bal'sam**, soft resin compressed from fruit of Myroxylon pereiræ. **W. pine**, Pinus strobus. **W. pop'lar**, Liriodendron tulipifera. **W. precip'itate**, hydrargyrum ammoniatum (U. S. Ph.). **W. root**, Angelica lucida; Asclepias tuberosa; Lingusticum actæifolium. **W. ros'in**, ordinary rosin which has been fused and then mixed with water, thus being rendered opaque and white. **W. saun'ders**, Santalum album. **W. snake'root**, Eupatorium ageratoides. **W. soft'ening**, a form of softening occurring usually in the white matter, especially about tumors and abscesses. **W., Span'ish**, bismuth subnitrate. **W. sub'stance of Schwann**, see *Nerve-fibre*. **W. swell'ing**, hydrarthrus. **W. swell'ing of lying-in women**, phlegmatia dolens. **W. tar'tar**, crude impure bitartrate of potassium deposited during fermentation on outside of casks containing white wine. **W. tinc'ture**, composed of cinchona, 6 p.; gentian, 2; orange-peel, 2; cinnamon, 1; dilute alcohol, 50; macerate (Ph. G.). **W. tur'pentine**, officinal turpentine. **W. vera'trum**, Veratrum album. **W. ver'vain**, root of Verbena urticifolia; has been used in malaria. **W. vit'riol**, sulphate of zinc. **W. wal'nut**, Juglans cinerea. **W. wax**, bleached yellow wax. **W. weed**, Chrysanthemum leucanthemum. **W. wine**, according to U. S. Ph. the fermented juice of grapes free from seeds, skins, and stems; containing not less than 10 nor more than 12 per cent., by weight, of alcohol. **W. wood**, liriodendron; Tilia Americana.

White'cap. Spiræa tomentosa.

White'ness of complex'ion. Paleness.

Whitening. Carbonate of calcium.

Whites, The. Leucorrhœa.

Whi'ting. Prepared chalk; used as whitewash and in the manufacture of putty. Also Gadus merlangus.

Whitley'a stramonifo'lia (after Whitley, an English botanist). Anisodus luridus.

Whit'low. Paronychia. **W. grass**, genus Draba, of ord. Cruciferæ.

Whoop'ing-cough (from the attendant *whoop*). Pertussis.

Whorl. In botany, a number of organs arranged about the central axis of a plant; verticil. **W. of the heart**, vertex of the heart.

Whor'lywort. Leptandra purpurea.

Whor'tleberry. Vaccinium myrtillus; Vaccinium vitis idæa. **W., bear's**, Arbutus uva ursi.

Whorts, black. Vaccinium myrtillus.

Whytt's disease (after Dr. Robt. Whytt of Edinburgh). Hydrocephalus internus.

Wico'py. Dirca palustris.

Wid'owwail. Cneorum tricoccum; Daphne Alpina.

Wig'ger's er'gotin. Extract of ergot, prepared from ergot from which the fixed oil has been extracted with ether.

Wild. Uncultivated. An epithet given to the countenance when not in harmony with the condition of the individual, indicating strong mental emotion, as a wild look. **W. all'spice**, Benzoin odoriferum. **W. ba'sil**, Chenopodium vulgare; Pycnanthemum incanum. **W. ber'gamot**, Monarda fistulosa. **W. cab'bage**, Brassica oleracea. **W. cham'omile**, Martula cotula. **W. cher'ry**, Prunus Virginiana; sedative, tonic, and expectorant. **W. cherry bark**, bark of Prunus serotina. **W. cin'namon**, see *Cinnamon*. **W. clove**, Myrcia acris. **W. cof'fee**, see *Coffee*. **W. col'umbine**, see *Columbine*. **W. cu'cumber**, see *Cucumber*. **W. fire**, erysipelas. **W. fire rash**, ignis sylvaticus. **W. gar'lic**, Canadian snakeroot, Asarum Canadense; rhizome is used; has diaphoretic, stimulant, and carminative properties. **W. hip'po**, Euphorbia ipecacuanha; see *Hippo*. **W. hore'hound**, see *Horehound*. **W. in'digo**, see *Indigo*. **W. ip'ecac**, see *Ipecac*. **W. jal'ap**, see *Jalap*. **W. Job's tears**, Onosmodium Virginianum. **W. leek**, Allium triococcum. **W. lem'on**, see *Lemon*. **W. lich'en**, Lichen agrius. **W. lic'orice**, see *Licorice*. **W. mar'joram**, see *Marjoram*. **W. mint**, Mentha Canadensis. **W. monks'hood**, Aconitum uncinatum. **W. on'ion**, Allium cernuum. **W. pars'nip**, Sium latifolium. **W. pep'pergrass**, Lepidium Virginicum. **W. pota'to**, see *Potato*. **W. rad'ish**, Raphanus raphanistrum. **W. rice**, see *Rice*. **W. rose'mary**, Andromeda polyfolia. **W. sarsaparil'la**, see *Sarsaparilla*. **W. sen'na**, see *Senna*. **W. thyme**, see *Thymus serpyllum*. **W. yam**, rhizome of Dioscorea villosa, indigenous in the Eastern States; has been used in bilious colic.

Wilde, cords of. Transverse striæ on corpus callosum, showing course of fibres from one hemisphere to the other.

Wilde's incis'ion. Incision of soft parts in operation upon mastoid region.

Will. Voluntas.

Wil'lan. Salix.

Wil'lan's lu'pus. Tubercular lupus.

Wil'lis, circle of. See *Circulus*.

Wil'low. Salix. **W., Bed'ford**, Salix fragilis. **W., broad'-leaved**, Salix latifolia. **W., crack**, Salix fragilis. **W., great round'-leaved**, Salix caprea. **W. herb, com'mon**, Lythrum salicaria. **W. herb, great**, Epilobium angustifolium. **W. herb, pur'ple**, Lythrum salicaria. **W. herb, pur'ple-veined**, Epilobium coloratum. **W., low bush**, Salix humilis. **W., red**, Cornus sericea. **W. rose**, Cornus sericea. **W., speck'led**, Salix humilis. **W., sweet**, Myrica gale. **W., white**, Salix alba.

Wil'son's disease. Generalized exfoliative dermatitis. **W.'s mus'cle**, a muscle the existence of which is disputed, described in 1813 by Wilson as arising from the pubes and inserted with the one of the opposite side into the membranous urethra. This term has also been erroneously applied to the levator prostatæ.

Winc'kel's disease. An acute disease of new-born infants, characterized by icterus, cyanosis, hemorrhages from various organs, infarctions of the kidney, and fatty degeneration of the liver. It is an extremely fatal affection; nineteen cases observed by Winckel

in 1879 died within thirty-two hours after the onset of the disease. It is sometimes called epidemic hæmoglobinuria of the new-born.

Wind. Breath. See *Flatulence.* **W. of a ball** or **shot,** sometimes improperly termed *Windage;* a term applied to the compression of air supposed to be produced by the passage of a ball near a part of the body, so as to occasion what has been called a *wind contusion.* **W. contu'sion,** see *Wind of a ball.* **W. drop'sy,** emphysema; tympanites. **W. fer'tilized** or **Anemophilous,** term applied to flowers which require transportation of their pollen by the wind in order to effect fertilization. **W. flow'er,** anemone. **W. get'ting,** gradual increase in the capability of the heart, especially of the right cavities, as a result of training. **W. pipe,** trachea. **W. pox,** see *Varicella.* **W. root,** Asclepias tuberosa. **W. stroke,** acute spinal paralysis of the horse. **W. weed,** Asclepias tuberosa.

Wind'age. See *Wind of a ball.*

Wind'iness. Flatulence.

Wind'sor bean. *Horse-bean, Vicia faba.* Used as food in the U. S. and Europe.

Wind'y. Flatuient; caused by wind or flatulence, as windy food, windy colic, etc.; one affected with flatulence or troubled with wind.

Wine. A name given by chemists to all liquors which have become spirituous by fermentation. The term is generally, however, restricted to the fermented juice of the grape, or fruits the product of whose fermentation resembles in almost all respects that of the juice of the grape. Wine is composed of the following ingredients (Pareira): Water, alcohol, bouquet or aromatic substance, sugar, gum, extractives, gluten (except where tannin is present), acetic acid, bitartrate of potassium, tartrate of potassium, aluminum (in German wines), sulphate of potassium, potassium and sodium chlorides, tannin, and coloring matter (in red wines), carbonic acid (in champagne). The extractive coloring matter is chiefly met with in red wines. All these constituents, except the alcohol, are found ready formed in the grape. The alcohol proceeds from the decomposition of the saccharine matter. A part of the acetic acid is also formed during fermentation. In all wines there is more or less of an odorous principle, partly derived directly from the grape and partly formed during fermentation, which has the characters of an essential oil, constitutes the perfume or *bouquet* of the wine, and is said not to exceed the forty-thousandth part of the wine. It is regarded as a true ether—a combination of oxide of ethyl with œnanthic acid.

From a table by Brande, exhibiting the quantity of spirit in different kinds of wines and liquors prepared for the London market, we obtain the following information as to the proportion of alcohol in each:

PROPORTION OF ALCOHOL, S. G. 0.825, IN ONE HUNDRED PARTS BY MEASURE OF THE FOLLOWING WINES AND MALT AND SPIRITUOUS LIQUORS.

Port—average of six kinds	23.48
" —highest	25.83
" —lowest	21.40

Irish "	53.90

The only wine recommended in some pharmacopœias is *Sherry.* It is a dry wine, the least variable in its properties, and agrees best with the dyspeptic. The brown sherries differ from the pale in the addition of a coloring liquid to the former, termed arrope, prepared by boiling sherry down to a syrup; but they frequently owe their hue to burnt sugar or caramel. The wines habitually drunk are almost innumerable. Those that are sweet or contain a large portion of free saccharine matter are decidedly the least wholesome to the dyspeptic. When wine is good and of a proper age, it is considered by many persons as tonic and nutritive; when new, flatulent and cathartic, disagreeing with the stomach and bowels. In medicine it is a valuable tonic in the last stages of debilitating or typhoid diseases, when the skin is not too hot and dry. Its use, however, requires great caution, and when once commenced under proper circumstances, it cannot be suddenly dropped without mischief. It is, perhaps, the best permanent stimulus in the catalogue of the materia medica.

Wine of al'oes. Vinum aloës. **W., aminæ'an,** once esteemed as stomachic. **W., antimo'nial,** vinum antimonii. **W., antiscorbu'tic,** vinum antiscorbuticum. **W., aromat'ic,** vinum aromaticum. **W., bark, com'pound,** vinum de kinâ kinâ compositum. **W., bar'ley,** cerevisia. **W., bit'ter, diuret'ic,** vinum diureticum amarum. **W., ce'dar,** cedrinum vinum. **W., champagne',** vinum campanum. **W., Chian',** Chium vinum. **W. of col'chicum,** vinum colchici. **W. of col'chicum-root,** vinum colchici radicis. **W. of col'chicum-seed,** vinum colchici seminis. **W., diuret'ic,** a wine recommended by Trousseau as a hydragogue in organic affections of the heart, especially such as are accompanied with dropsy. It is made as follows: vin. albi, 750 grammes; scillæ corm., 5 grammes; bacc. junip., 50 grammes; digitalis fol., 10 grammes; macerate together for four days; add potass. acetat., 15 grammes, and filter; see *Vinum diureticum amarum.* **W. of er'got,** vinum ergotæ. **W. of gen'tian, com'pound,** vinum gentianæ compositum. **W. of hel'lebore, white,** vinum veratri. **W. of ipecacuan'ha,** vinum ipecacuanhæ. **W. of i'ron,** vinum ferri. **W. of i'ron, cit'rate of,** vinum ferri citratis. **W., med'icated,** vinum medicinale. **W., mulled,** see *Wine.* **W. of o'pium,** vinum opii. **W., or'ange,** vinum aurantii. **W. of pep'sin,** vinum pepsini. **W., port,** vinum Portugallicum. **W. of qui'nia,** vinum quiniæ. **W., rhu'barb,** vinum rhei. **W., sher'ry,** vinum. **W. of squill,** vinum scillæ. **W., steel,** vinum ferri. **W., tar,** see *Pinus sylvestris.* **W., tobac'co,** vinum tabaci. **W. vin'egar,** acetum vini; vinegar produced by acetic fermentation of wine. **W., white,** see *Wine.* **W. of worm'wood,** vinum absinthites.

Wine-bit'ters. The formulæ for these may be various. The following is as good and agreeable as any: rad. gentian., ℔ j; cort. aurant., ℥ x; sem. cardam. cort., ℥ iv; cinnam. cort., ℥ iv; wine, foreign or domestic, cong. iiiss; tonic and stomachic.

Wine-nose. Acne rosacea.

Wine-whey. *White-wine whey.* Take of good milk

two-thirds of a pint, and add water to make a pint. Take of sherry or any other good white wine two glasses, and of sugar a dessertspoonful. Place the milk and water in a deep pan on the fire, and the moment it boils pour into it the wine and sugar. Stir assiduously for twelve or fifteen minutes, while it boils. Strain through a sieve. It is a good mode of giving wine in adynamic states.

Winged elm. Ulmus alata. **W. scap'ulæ,** appearance presented by the scapulæ in tuberculosis of the lungs.

Wings of Ingras'sias. Wings of sphenoid. **W. of sphe'noid,** two pairs of lateral processes proceeding from the body of the sphenoid bone. The *greater wings* articulate posteriorly with the petrous and squamous portions of the temporal bone, anteriorly with the frontal, parietal, and malar bones. The *lesser wings* assist in forming the posterior portion of the roof of the orbit, articulating with the frontal bone.

Wing'seed. Ptelea trifoliata.

Wink'ers. Cilia.

Wink'ing. Nictation. Closure of the eyelids.

Wins'low, fora'men of. Hiatus of Winslow. **W., lig'ament of,** see *Genu.* **W., poste'rior lig'ament of,** see *Genu.*

Win'ter bloom. Hamamelis Virginiana. **W. cherry,** physalis; see *Cherry.* **W. clover,** Mitchella repens. **W. cough,** chronic bronchitis. **W. grapes,** frost grapes. **W. itch,** form of itch occurring in winter, chiefly on the lower extremities, attended by intense itching and burning sensation. The skin is commonly harsh and dry. **W. plum,** Diospyros Virginiana; ordinary persimmon. **W. sa'vory,** Satureia Montana.

Winte'ra (after Captain Winter, who first carried it to Europe) or **W. aromat'ica.** *Winter's bark tree,* ord. Magnoliaceæ. The bark, *Wintera,* is very much allied in its properties to Canella alba. **W. canel'la,** Canella alba.

Wintera'na aromat'ica. Wintera aromatica.

Win'terberry, smooth. Prinos lævigatus. **W., Virgin'ia,** prinos. **W., whorled,** prinos.

Wintergreen. Gaultheria. Pyrola. Pyrola maculata.

Win'ter's bark. Bark of Drimys winteri. Tonic. Wintera aromatica.

Wint'rich's sign. Change of pitch of percussion note over a cavity in the lungs, according as the mouth is opened or closed.

Wir'sung's duct. See *Pancreas.*

Wis'dom teeth. See *Dentition.*

Wismu'thum. Bismuth.

Wis'tar, pyr'amids of (after Professor Wistar of the University of Pennsylvania). Sphenoidal cornua.

Wista'ria or **Wiste'ria.** Genus of shrubs belonging to the order Leguminosæ, so named after Prof. Wistar of the University of Pennsylvania. They are cultivated chiefly for ornament. They are natives of the United States, China, and Japan.

Wit teeth. See *Dentition.*

Witch'en. Sorbus aucuparia.

Witch-ha'zel. Hamamelis Virginiana; Sorbus aucuparia.

Witch'meal. Lycopodium.

Witch'wood. Sorbus aucuparia.

With'ering. Atrophy of an organ or part.

With'erite. Form of barium carbonate found in nature.

With'ers. Ridges on either side above the shoulders of the horse, due to spinous processes of the dorsal vertebræ.

Wiz'en (weasand). Trachea.

Wladimeroff's opera'tion. An operation for excision of the tarsus with the lower ends of the tibia and fibula. The lower ends of tibia and fibula, astragalus, os calcis, and half of scaphoid and cuboid bones are excised. The cut surfaces of the scaphoid and cuboid are then approximated to those of the tibia and fibula, and the wound closed. This procedure is also called Mikulicz's operation.

Woad. Isatis tinctoria. **W. wax'en,** Genista tinctoria.

Wolf'bane. Veratrum viride.

Wolff'ian bod'ies. See *Corpus Wolffianum.* **W. duct,** duct of W. body.

Wolf'-grape. Solanum dulcamara.

Wölf'ler's opera'tion. Operation to establish a fistulous communication between the stomach and upper end of the small intestine in obstructive disease of the pylorus.

Wolf's'bane. Aconitum. **W., whole'some,** Aconitum anthora.

Wolf's'claw. Lycopodium.

Wolf's'jaw. See *Hare-lip.*

Wom'an. Adult human female.

Wom'anhood. The state of puberty in the female. State or qualities of a woman.

Womb. Uterus. **W., fall'ing down of the,** prolapsus uteri. **W. grain,** ergot. **W., inflamma'tion of,** see *Metritis.* **W., inflamma'tion of the li'ning mem'brane of,** see *Endometritis.* **W., lacera'tion of the,** rupture of the uterus. **W. pass'age,** see *Vagina.* **W., retroflex'ion of,** see *Uterus.* **W., retrover'sion of,** see *Uterus.* **W. stone,** uterine myoma which has undergone coagulation. **W., tym'pany of the,** physometra.

Wom'ival. Pereira medica.

Wood ap'ple. Fruit of Feronia elephantum, native of India; has been used as an astringent. **W. bet'ony,** Betonica officinalis. **W., Brazil,** Cæsalpinia echinata. **W. char'coal,** see *Charcoal.* **W., elk,** Andromeda arborea. **W. evil,** inflammation of the intestines or stomach and intestines of cattle. **W. lice,** onisci aselli. **W., March,** sanicle. **W. naph'tha,** acetone. **W., Nicara'gua,** see *Cæsalpinia.* **W. oil,** gurjun balsam; see *Dipterocarpus.* **W., peach,** see *Cæsalpinia.* **W., Pernambu'ca,** Cæsalpinia echinata. **W. roof, sweet-scent'ed,** Asperula odorata. **W. sage,** teucrium. **W. samp'fen,** Cæsalpinia sappan. **W. soot, salt of,** ammoniæ carbonas. **W. sor'rel,** Oxalis acetosella. **W., sour,** Andromeda arborea. **W. spir'it,** methylic alcohol. **W. straw'berry,** Fragaria vesca. **W. tar cre'asote,** creasotum (Ph. U. S.). **W. tea,** a mixture of sassafras, guaiac wood, ononis root, and licorice root, officinal in German Pharmacopœia. **W. vin'egar,** impure acetic acid obtained from destructive distillation of wood. **W. wax'en,** Genista tinctoria. **W. wex,** Genista tinctoria. **W., witch,** Sorbus aucuparia. **W., yel'low,** Oxalis stricta.

Wood'bine, com'mon. Lonicera periclymenum.

Wood'en tongue. Disease of cattle, due to a microorganism, consisting of nodular tumors in the lung and in the subcutaneous and intermuscular tissues.

Wood's meth'od. Suturing together the pillars of the ring for cure of inguinal hernia.

Woods, sudorif'ic. This term is applied collectively to guaiacum, sassafras, china, and sarsaparilla, which are often used together to form the sudorific decoction.

Wood'y night'shade. Solanum dulcamara.

Wool. Hair of sheep and certain other mammals. **W. fat,** lanolin.

Wools, Holmgren's. Collection of different colored wools used to detect and estimate the degree of color-blindness.

Wool-sort'er's disease. Anthrax.

Woora'li or **Woora'ra.** Curare.

Word-blind'ness. Loss of understanding of written or printed words, although the person so affected may be able to write and speak correctly, and even read by means of raised letters through the sense of touch. Ideation regarding visual perception of letters is lost.

Word-deaf'ness. Loss of understanding of spoken words, which are heard as sounds only, while power of reading and understanding written or printed matter is retained.

Worm. See *Alembic, Vermiform process,* and *Worms.* **W. disease,** helminthiasis. **W. fe'ver,** that due to intestinal worms. **W. grass,** Spigelia Marilandica. **W., Guin'ea,** dracunculus.

Worm'bark tree. Geoffræa inermis.

Worm'grass, peren'nial. Spigelia Marilandica.

Wor'mia excel'sa. Tree belonging to the Dilleniaceæ, native of Java, having large yellow blossoms.

Wormia'na os'sa or **ossic'ula.** *Wormian bones.* Small bones which are sometimes observable in the sutures of cranial bones, of which they form a part. They are called wormiana, from Olaus Wormius, who is said to have first described them. They had been previously, however, mentioned by G. Andernach, a physician at Strasburg. The ossa wormiana exist more commonly in the sutures of the vault of the skull, especially in the lambdoidal, sagittal, and squamous. They are uncommon at the base of the skull. Their size is very variable and shape irregular. Their structure and development are similar to those of the other bones of the cranium, and, like them, they are bounded by sutures.

Wormit. Artemisia absinthium.

Worm'root. Spigelia Marilandica.

Worms. *Entoparasites.* Animals whose common character is that of existing only in other animals (hence their name entozoa, *entos*, within, *zoon*, animal). They are met with not only in the natural cavities, but even in the tissues of the organs, but chiefly in the intestines.

CLASSIFICATION OF WORMS.

VERMES, HELMINTHA.

A. Platyelmia, flat worms.
First subclass.—Cestoïdea, cestode or tape-worms (*cestus*, band or girdle, *eidos*, resemblance).
First order.—Bothriocephali; bothriocephalus latus.
Second order.—Tæniæ.
I. Tæniæ, occurring in the mature state.—1. Tænia solium; 2. Tænia mediocanellata; 3. Tænia nana.
II. Immature tæniæ.—1. Cysticercus cellulosæ; 2. Cysticercus tenuicollis; 3. Echinococci; Appendix—acephalocysts; 4. Cysticercus vesicæ hominis.
Second subclass.—Trematoda—worms endowed with suckers for adhesion and imbibition (*trema*, hole).
Family I. Monostoma.—1. Monostoma lentis.
Family II. Distoma.—1. Distomum hepaticum; 2. Distomum lanceolatum; 3. Distomum heterophyes; 4. Distomum hæmatobium; 5. Distomum ophthalmobium.

B. Nematelmia, round- or thread-worms.
1. Trichocephalus dispar—trichina spiralis; 2. Oxyuris vermicularis; 3. Strongylus gigas; 4. S. longevaginatus; 5. Anchylostomum duodenale; 8. Ascaris lumbricoïdes.

The most common of these are the Oxyuris vermicularis, Ascaris lumbricoïdes, and Tæniæ, which are found in the intestines. The origin of these worms is extremely singular, and more favorable than any other fact to the hypothesis of spontaneous generation in the lowest tribes of animated nature. They are certainly not identical with any worms out of the body. They are most commonly met with in children improperly fed, but their presence cannot be positively detected by any symptoms, except that of the discharge of the worms themselves in the evacuations. They may, of course, give rise to every kind of irritation in the intestinal tube, and to sympathetic disturbance in most of the functions; but all these signs may be produced by intestinal irritation resulting from other causes. See *Anthelmintics*, *Acne*.

W., errat'ic, see *Erratic.*

Worm'seed. Artemisia santonica; Chenopodium anthelminticum. **W. goose'foot,** Chenopodium anthelminticum. **W., Levant',** Artemisia santonica. **W., Tarta'rian,** Artemisia santonica.

Worm'weed, Cor'sican. Corallina Corsicana; Polanisia graveolens. **W., white,** Corallina.

Worm'wood, bien'nial. Artemisia biennis. **W., Can'ada,** Artemisia Canadensis. **W., com'mon,** Artemisia absinthium. **W., creep'ing,** Artemisia rupestris. **W., les'ser,** Artemisia pontica. **W., Ro'man,** Artemisia pontica. **W., sea,** Artemisia maritima. **W., sil'ky,** Artemisia glacialis.

Wor'sum. Pus.

Wort. An infusion of malt formerly used in scurvy.

Wound. A solution of continuity in the soft parts produced by some mechanical agent. Wounds present innumerable differences as regards their situation, the parts interested, direction, size, shape, the nature of the instrument or agent producing them, their more or less simple or complex character, duration, etc. A wound is called *incised* when made by a cutting instrument; *punctured* when made by a pointed instrument; *lacerated* when parts are lacerated or torn by the vulnerating body; *poisoned* when some virulent or venomous substance has been introduced; and *contused* when produced by a blunt body. Gunshot wounds belong to the last division.

Wound'weed. Solidago odora.

Wound'wort. Stachys, a genus of plants.

Woura'li, Woura'ri, or **Woura'ru.** Curare.

Wour'nils. *Warbles.* Irritation of the skin of horses and cattle produced by the œstrus bovis, causing inflammation from deposits of lymph from the development of larvæ from the egg, suppuration, etc.

Wrack blad'der, yel'low. Fucus vesiculosus. **W., sea,** Fucus vesiculosus, Pila marina.

Wrap'ping up (of the hydropathists). Packing in dry or wet sheets, called respectively dry packing and wet packing, practised by the hydropathists to induce sweating.

Wreath. See *Karyokinesis.*

Wrench. Sprain.

Wret'weed. Euphorbia palustris.

Wrick. Sprain.

Wright'ia. Genus of shrubs belonging to the order Apocynaceæ, growing in India and the Eastern hemisphere. **W. antidysenter'ica** (after Dr. Wright, a physician and botanist of Jamaica). Nerium antidysentericum. **W. tincto'ria,** tree of India, leaves of which furnish an inferior quality of indigo.

Wright'ine. $C_{24}H_{40}N_2$. Alkaloid from barks of Wrightia antidysenterica and Holarrhena antidysenterica; used in diarrhœa and dysentery.

Wrink'le. A furrow or fold in the skin of the face, forehead, vagina, etc. See *Corrugation.*

Wrink'led. Full of wrinkles.

Wris'berg, abdom'inal brain of. The solar plexus. **W., car'tilages of,** cuneiform cartilages of the larynx. **W., gan'glion of,** cardiac ganglion. **W., nerve of,** cutaneous nerves of the arm, from the second and third dorsal nerves.

Wrist. Carpus. **W. clo'nus,** rhythmical contraction like those of ankle-clonus, produced by grasping the tips of the fingers and pressing the hand backward, so as to obtain hyperextension at the wrist.

Wrist'-drop. Paralysis of the muscles of the forearm, induced by lead-poisoning.

Wrist'-joint. Articulation of radius and triangular fibrocartilage with scaphoid, semilunar, and cuneiform bones of carpus.

Wri'ter's cramp. See *Cramp, writer's.* **W.'s pal'sy,** see *Cramp, writer's.* **W.'s spasm,** see *Spasm, writer's.*

Wrong heir. Cancellus.

Wry'neck. Torticollis.

Wura'li. Curare.

Wut'zer's opera'tion. An operation proposed by Wutzer for cure of inguinal hernia.

X.

X-leg. Bending of the leg inward.

Xalap'a. Convolvulus jalapa.

Xanthelas'ma palpebra'rum (*xanthos, elasma*, lamina). A condition like vitiligoïdea favosa, near the inner angle of the eyelids, usually associated with or dependent upon hepatic derangement. **X. pla'num**, see *Vitiligoïdea*.

Xanthic, zan'thik (*xanthos*, yellow). Having yellow color; frequently applied to color of urine. **X. ox'ide**, uric oxide; see *Calculi* and *Urine, examination of*.

Xan'thine. $C_5H_4N_4O_2$. Leucomaïne found in many parts of the body, in plants and seeds, and in urinary calculi; it may also be prepared synthetically. See *Leucomaïnes* (table) and *Uric oxide*.

Xan'thium (*xanthos*, yellow, because of the color the plant yields). *Lesser burdock, Burweed, Burthistle, Clotbur, Cocklebur*. This herb was once esteemed for the cure of scrofula. The seeds have been administered in cutaneous affections.

Xanthiu'ria. Xanthuria.

Xan'tho (*xanthos*, yellow). Prefix meaning yellow.

Xanthoceph'alus (*xanthos, kephale*, head). Term used to denote a species of animals having yellow heads; also used to denote a mushroom having a yellow capitulum.

Xanthochroi'a (*xanthos, chroa*, color). Xanthopathia.

Xanthocreatinine, zan-tho-kre-at'in-een. $C_5H_{10}N_4O$. Chief leucomaïne in muscles. Crystallizes in small yellow plates. In sufficient dose it is capable of producing dangerous symptoms, ushered in by stupor, great muscular weakness, with vomiting and diarrhœa. In active muscles it is present with creatinine in about the proportion of 1 to 10 of creatinine. See *Leucomaïnes* (table).

Xanthoder'ma (*xanthos, derma*, skin). Xanthopathia.

Xanthodontous, zan-tho-don'tus (*xanthos, odous*, tooth). Yellowness of the teeth.

Xan'thogen (*xanthos, gennao*, to produce). A vegetable coloring matter which has a yellow reaction with alkalies.

Xanthoky'anopy (*xanthos, kuanos*, blue, *ope*, vision). Form of color-blindness in which only yellow and blue are appreciated, red and green not being distinguished.

Xantho'ma (*xanthos, oma*). Xanthopathia. Neoplastic connective-tissue growths appearing as yellowish, variously shaped, non-indurated plates or tubercles, usually about the eyelids and rarely elsewhere. See *Vitiligoïdea*. **X. diabetico'rum**, lesions occurring sometimes in the course of diabetes, and resembling xanthoma, from which, however, it is pathologically different. **X. mul'tiplex**, lesions are multiple. **X. palpebra'rum**, X. affecting the eyelids. **X. pla'num**, X. having flat lesions. **X. tuberculo'sum** or **tubero'sum**, X. in which the lesions are in form of tubercles.

Xanthomel'anous (*xanthos, melas*, black). Epithet applied to people of yellow, brown, or olive skin and black hair.

Xanthopathi'a or **Xanthop'athy** (*xanthos, pathos*, affection). Yellow coloration of the skin produced by pigmentary change; including lentigo and chloasma.

Xanthophane, zan'tho-fane. An orange-yellow coloring matter derived from the retina.

Xanthophyll, zan'tho-fil (*xanthos, phullon*, leaf). Yellow pigment contained in leaves of plants and petals of flowers.

Xanthopicrin (zan-tho-pi'krin) or **Xanthopi'crite** (*pikros*, bitter). See *Xanthoxylum clava Herculis*. The term *Xanthopicrite* is also applied to a bitter yellow principle obtained from several other plants.

Xanthopro'teic acid. Acid produced by decomposition between nitric acid and proteids; it is non-crystallizable. **X. reac'tion**, that derived from adding ammonia to proteids which have been boiled with nitric acid. The result is a deep orange-yellow color.

Xanthop'sia (*xanthos, opsis*, vision). Yellow vision, as sometimes occurs in jaundice.

Xanthop'sin. Yellow coloring matter of the retina. A derivative of santonin, which gives color to the urine when santonica is taken internally.

Xanthopsydracia, zan-tho-sid-ras'e-ah (*xanthos, psudrax*, a pustule). Pimples or pustules having a yellow color.

Xanthopuccine, zan-tho-puk'seen. Alkaloid derived from hydrastis.

Xanthorhamnin, zan-tho-rham'nin. Yellow coloring matter found in berries of rhamnus.

Xanthorrhiza, zan-thor-rhe'zah (*xanthos, rhiza*, root). Xanthorrhiza apiifolia. **X. apiifo'lia**, *Yellowroot, Parsley-leaved yellowroot, Yellowwort, Shrub yellowwort;* root of this American plant—*Xanthorrhiza* (Ph. U. S.)—is a strong and pleasant bitter, and in the dose of two scruples agrees with the stomach.

Xanthorrhœa, zan-thor-rhe'ah (*xanthos, rheo*, to flow, from its yellow resin). *Grasstree*. A genus of trees in Australia, ord. Liliaceæ, of which there are several species. Two resins are obtained from them: one, the yellow resin of xanthorrhœa or of New Holland, Botany Bay resin or gum, acaroid resin or gum, which probably resembles tolu and storax in medicinal properties; the other the red resin of xanthorrhœa, blackboy gum.

Xan'thos (*xanthos*). Yellow.

Xantho'sis (*xanthos, osis*). A term applied to the yellow discoloration often observed in cancerous tumors, especially in encephaloid of the testicle.

Xanthostrumarin, zan-tho-strew'mah-rin. Yellow non-crystalline glucoside derived from fruit of Xanthium strumarium.

Xanthoxylaceæ, zan-thoks-il-ah'se-e. A natural order of trees growing in China and Japan; they all have aromatic properties.

Xanthoxylene, zan-thoks'il-een. $C_{20}H_{16}$. The volatile oil of Xanthoxylum piperitum after xanthoxylin has been separated from it.

Xanthox'yli fruc'tus. Prickly-ash berries. See *Xanthoxylum*.

Xanthox'ylin. See *Xanthoxylum clava Herculis*.

Xanthoxylum, zan-thoks'il-um (*xanthos, xulon*, wood). *Shrubby prickly ash, Toothache bush, Toothache tree, Pellitory, Yellowwood, Suterberry;* ord. Xanthoxylaceæ. A spirituous infusion of the bark—*Xanthoxylum* (Ph. U. S.)—has been recommended in violent colic. The fresh juice, expressed from the root of xanthoxylum, is said to afford relief in the dry belly-ache of the West Indies. A decoction of the bark is sometimes used as a wash for foul ulcers. **X. America'num**, prickly ash of the Northern and Middle States; X. fraxineum. **X. Caribbæ'um**, a West Indian shrub, said to possess antipyretic qualities. **X. Carolinia'num** has similar properties, but is more acrid. **X. cla'va Her'culis**, of the West Indies, is a strong stimulant and powerful sialagogue; has been given internally in rheumatism. A neutral, very bitter, and astringent substance has been obtained from it, called *Xanthopicrin, Xanthopicrite*, and *Xanthoxylin*. **X. fraxin'eum**, xanthoxylum. **X. fraxinifo'lium**, xanthoxylum. **X. nit'idum**, shrub of China; febrifuge. **X. octan'dra**, Fagara octandra. **X. piperi'tum**, Fagara piperita. **X. ramiflo'rum**, xanthoxylum. **X. tricar'pum**, xanthoxylum.

Xanthuria, zan-thu're-ah (*xanthos, ouron*, urine). A condition of the system and of the urine in which xanthic oxide is deposited from the urine.

Xanthuret, zan'thu-ret. The product of the combination of xanthogen with a metallic base.

Xantoli'na. Artemisia santonica.

Xenenthesis, zen-en'thes-is (*xenos,* a stranger, *tithemi,* to place). The act of putting any foreign body within the organism.

Xenodoceum, zen-o-do-se'um (*xenos,* stranger, *dechomai,* to receive). Hospital.

Xenodocheum (zen-o-dok-e'um) or **Xenodochi'um** (*xenodocheion*). Hospital.

Xenogamy, zen-og'am-e (*xenos,* stranger, *gamos,* marriage). Term applied to cross-fertilization of flowers by pollen from another plant of the same species. The pollen is carried by the wind and by various insects.

Xenogenesis, zen-o-jen'es-is. See *Heterogenesis.*

Xenomenia, zen-o-men'e-ah (*xenos,* foreign, *menia,* menstruation. Abnormal or vicarious menstruation.

Xenophthalmia, zen-of-thal'me-ah. Conjunctivitis caused by the presence of a foreign body in the eye; traumatic conjunctivitis.

Xeran'sis (*xeros,* dry). Arefaction; drying.

Xeran'tia (*xeros,* dry). Drying or desiccative medicines.

Xerantic, zer-an'tik (*xerantichos,* relating to the process of drying). Producing dryness or being dry.

Xera'sia (*xeros,* dry). A disease of the hairs, which become dry, cease to grow, and resemble down covered with dust. **X. cap'itis,** xerasia. **X. sauriöi'des,** an accumulation of sebaceous substance on the surface of the skin, desiccating in scales or spines.

Xe'rion (*xeros,* dry). Catapasma.

Xe'ro (*xeros,* dry). In composition, dry.

Xerocollyrium, zer-o-kol-lir'e-um (*xero, kollourion,* collyrium). A dry collyrium.

Xeroder'ma (*xero, derma,* skin). Diminution of secretion of the sebaceous glands. **X. ichthyo'des,** ichthyosis.

Xero'ma (*xero, oma*). Xerophthalmia. **X., conjuncti'val,** xerophthalmia. **X., lac'rymal,** suppression of the lacrymal secretion; see *Xerophthalmia.*

Xeromycter, zer-o-mik'ter. Xeromycteria.

Xeromycteria, zer-o-mik-ter'e-ah (*xero, mukter,* nose). Dryness of the nose.

Xerom'yron (*xero, muron,* ointment). A dry ointment.

Xerophagia (zer-o-faj'e-ah) or **Xeroph'agy** (*xero, phago,* to eat). Excessive use of dry ointment.

Xerophthalmia, zer-of-thal'me-ah (*xero, ophthalmia,* inflammation of the eye). An inflammation of the eye, without discharge. This term—as well as *Conjunctival* and *Lacrymal xeroma* and *Cuticular conjunctiva*—has been given to cases in which the conjunctiva is so changed that it presents more of the characters of skin than of mucous membrane. Lippitudo.

Xeros'toma or **Xerostomia,** zer-os-tom'e-ah (*xeros,* dry, *stoma,* mouth). Deficiency of secretion in the mouth. Aptyalism.

Xerotrib'ia (*xero, tribo,* to rub). See *Friction.*

Xerotripsis, ze-ro-trip'sis. Dry friction.

Ximenia, zim-en'e-ah. African plant, the leaves of which are anthelmintic. See *Agiahalid.*

Xiphister'num (*xipho, sternum*). Xiphoid cartilage.

Xiph'o (*xiphos,* sword). In composition, ensiform cartilage.

Xiphocostal (zi-fo-kos'tal) **lig'ament.** The ligament extending from the xiphoid to the cartilage of the seventh rib. See *Xiphoid ligament.*

Xiphodes, zif-o'dees. Xiphoid.

Xiphodymus (zif-od'im-us) or **Xiphod'ymus** (*xipho, dueo,* to mingle). Thoracogastrodidymus.

Xiphoid, zi'foid (*xipho, eidos,* shape). Sword-shaped. *Ensiform appendix, cartilage,* or *process.* Name of the appendix terminating beneath the sternum. **X. lig'ament,** *Costoxiphoid ligament,* is a small, very thin ligamentous fasciculus passing from the cartilage of prolongation of the seventh rib to the anterior surface of the xiphoid cartilage, where it is inserted by its fibres decussating with those of the opposite ligament.

Xiphoidian, zi-foid'e-an. Relating or attached to the xiphoid cartilage.

Xiphopages (zif-op'aj-ees) or **Xyphopa'ges** (*xipho, pegnumi,* to fix). Monstrosity in which twins are united by the epigastrium, as in the case of the Siamese twins.

Xiphoster'num. Xiphoid.

Xylene, zi'leen. Xylol.

Xylo-al'oes (*xulon,* wood, *aloes*). Agallochum.

Xylobal'samum. See *Amyris opobalsamum.*

Xylocar'pous (*xulon,* wood, *karpos,* fruit). Bearing woody fruit.

Xylocas'sia. Laurus cassia.

Xylocinnamo'mum. Laurus cinnamomum.

Xyloid, zi'loid (*xulon,* wood, *eidos,* resemblance). Wood-like, woody; having resemblance to wood.

Xyloidin, zi-loid'in. $C_6H_9(No_2)O_5$. Substance formed by action of nitric acid on potato starch. It is a tasteless white powder, soluble in boiling water and insoluble in alcohol.

Xylol, zi'lol (*xulon,* wood). Colorless hydrocarbon derived from coal-naphtha by distillation, mixture with sulphuric acid, and dry distillation, and subsequent purification. It has been employed in variola. It is given in doses of ten to fifteen drops to adults, three to five drops to children, every hour or two, in that disease. Chemically, dimethyl benzine.

Xyloma, zil-o'mah. Woody tumor of plants.

Xylophilous, zi-lof'il-us (*xulon,* wood, *phileo,* to love). Term applied to animals and plants living in or upon decayed wood.

Xylopia, zi-lo'pe-ah. Genus of shrubs of order Anonaceæ, growing in the West Indies and Brazil; possessing aromatic properties. **X. aromat'ica** bears aromatic fruit which is used as a condiment. **X. grandiflo'ra** bears fruit which possesses carminative properties.

Xylostyp'tic ether. Styptic collodion; used chiefly in surgery.

Xympathi'a. Sympathy.

Xy'ris (*xuron,* razor, from the shape of its leaves). Iris fœtidissima. **X. bulbo'sa,** *Yellow-eyed grass;* indigenous; ord. Xyridaceæ; roots and leaves are used by the Hindoos in lepra and chronic cutaneous diseases.

Xy'rum or **Xy'rus** (*xuron*). Razor.

Xy'sis (*xuo,* to scrape). Rubbing, scraping, tearing, rasping.

Xysma, zis'mah (*xusma,* shaving). Linteum; rasura; scobs.

Xysmus, zis'mus (*xuo,* to scrape). Scraping, as a bone.

Xys'ter (*xuster,* a scraper). Instrument for scraping.

Xystos, zis'tos (*xustos,* scraped). Linteum.

Xystrum, zis'trum (*xustron,* a scraper). Instrument for scraping. **X. ophthal'micum,** instrument for scraping the eye or the lids.

Xyxida'ceæ. A natural order of small shrubs, growing chiefly in the tropics.

Y.

Y-car'tilage. Cartilage uniting the three parts of the hip-bone in the acetabulum, before puberty; later in life it undergoes ossification.

Y-lig'ament. See *Ligament, ileo-femoral.*

Y-shaped cen'tre. Term sometimes applied to T-cartilage.

Yam. Esculent root principally obtained from Dioscorea alata, D. bulbifera, and D. sativa. They grow spontaneously in both the Indies, and their roots are eaten promiscuously, as the potato is with us. Their taste is somewhat like that of the potato. **Y. root, wild,** Dioscorea villosa.

Yard. Penis.

Yar'row, com'mon. Achillea millefolium.

Yau'pon. Ilex vomitoria.

Ya'va skin. Elephantiasis Arabum.

Yawn'ing. *Gaping.* A deep inspiration, with considerable separation of the jaws, executed slowly and in an involuntary manner, followed by a prolonged sonorous expiration. This respiratory movement is preceded by a feeling of oppression in the epigastric region and in the muscles of respiration and mastication. Yawning has been conceived to be owing to torpor in the pulmonary circulation, the causes producing it being commonly ennui, fatigue, sleepiness, monotonous sounds, hunger, sympathy, etc. Yawning often precedes the invasion of certain intermittents, attacks of hysteria, etc., and it may, by its frequency and obstinacy, become a true disease.

Yaw'root. Stillingia.

Yaws. Framboesia.

Yeast. A peculiar product which collects on the surface of beer while fermenting. Yeast is antiseptic. It is applied in the form of cataplasm to foul ulcers, acting by virtue of the generation of carbonic acid gas. **Y. plant,** Torula cerevisiæ.

Yelk. See *Ovum.*

Yel'low. One of the seven primitive colors. See *Spectrum.* **Y. ash,** Cladrastis tinctoria. **Y. at'rophy of liv'er,** an acute general disease of the liver attended by destructive changes in the cells. Also called malignant jaundice, because of its extreme fatality. **Y. bed'straw,** Galium verum. **Y. ber'ry,** Podophyllum montanum. **Y. cincho'na,** bark of Cinchona calisaya. **Y. dock,** Rumex crispus. **Y. dye tree,** Cœlocline polycarpa. **Y. elas'tic tis'sue,** form of connective tissue having anastomosing fibrillæ; elastic, broken ends curl up, and acids and alkalies do not affect it like ordinary connective tissue. **Y. eye,** Hydrastis Canadensis. **Y. fe'ver,** see *Fever, yellow.* **Y. fe'ver, mild,** see *Relapse.* **Y. gen'tian,** Gentiana lutea. **Y. i'odide of mer'cury,** mercurous iodide. **Y. Jack,** fever, yellow. **Y. jas'mine,** gelsemium. **Y. la'dies' bed'straw,** Galium verum. **Y. lig'aments** occupy the spaces between the vertebral plates, from the interval which separates the second vertebra from the third to that which separates the last vertebra from the sacrum. They are so called in consequence of their color. **Y. mel'ilot,** Melilotus altissimus. **Y. mercu'rial lo'tion,** yellow wash. **Y. mercu'ric ox'ide,** hydrargyri oxidum flavum (Ph. Br.). **Y. mus'tard seed,** white mustard. **Y. ox'ide of mer'cury,** mercuric oxide. **Y. paint,** Hydrastis Canadensis. **Y. paril'la,** Menispermum Canadense. **Y. pine,** Pinus palustris. **Y. pond'-lily,** Nuphar advena. **Y. pop'lar,** Liriodendron tulipifera. **Y. prus'siate of pot'ash,** ferrocyanide of potassium. **Y. puccoon',** Hydrastis Canadensis. **Y. res'in,** resina (Ph. U. S.). **Y. root,** Jeffersonia Bartoni. **Y. root, pars'ley-leaved,** Xanthorrhiza apiifolia. **Y. root, shrub,** Xanthorrhiza apiifolia. **Y. saun'ders,** Santalum album. **Y. star,** Helenium autumnale. **Y. subsul'phate of mer'cury,** mercuric basic sulphate; turpeth mineral. **Y. vis'ion,** xanthopsia, usually dependent on jaundice. **Y. wash,** made by addition of mercuric chloride to lime-water in proportion of 1 to 243 (Ph. Br.) or 1 to 300 (Cod.). It consists of mercuric oxide held in suspension by calcium-chloride solution. **Y. wa'ter-lily,** Nuphar advena. **Y. wax,** ordinary beeswax; to prepare, express the honey, melt the residue in boiling water, and pour into moulds. **Y. weed,** Ranunculus acris. **Y. wood,** Xanthoxylum fraxineum. **Y. wood, pars'ley-leaved,** Xanthorrhiza apiifolia. **Y. wood'sorrel,** Oxalis stricta.

Yel'lows. Cypripedium luteum. Icterus. See *Leucorrhœa* and *Ranunculus acris.*

Ye'men ul'cer. See *Beriberi.*

Yer'ba bue'na. Micromeria Douglasii. **Y. man'sa,** Anemopsis Californica. Leaves possess tonic, astringent, and stimulant properties, and have also been used in malarial fevers. **Y. maté,** Ilex Paraguayensis. Paraguay tea. **Y. reu'ma,** Frankenia grandifolia. **Y. san'ta,** Eriodictyon Californicum.

Yest. Yeast.

Yew'tree. Taxus baccata. **Y., Amer'ican,** Taxus Canadensis.

Yex (by onomatopœia). Singultus.

Y'lech. Ilech.

Ylia'ter. Ilech.

Yoke (by onomatopœia). Singultus.

Yolk (yelk). See *Ovum* and *Vesicula umbilicalis.* **Y. gran'ules,** small granules within the yolk. **Y. mem'brane,** see *Vesicula umbilicalis.* **Y. plates,** plate-like yolk-granules. **Y. rest,** central mass of cells forming segmentation spheres. **Y. sac,** the bag-like portion of the splanchnopleure extending beyond the body of the embryo. **Y. stalk,** the narrow part of the yolk-sac connecting it with the embryo.

Yo'pon. Ilex vomitoria.

Young-Helm'holtz the'ory. An hypothesis explaining color-sense by the supposition that there are three kinds of nervous elements corresponding to the primary colors, and that we perceive these colors by stimulation of these nerve-elements.

Young's rule. A rule for adjusting the dose of medicines to the age of the patient, Add twelve to the age and divide the age by the result. See *Doses.*

Youpon. Ilex cassine. "Black tea," formerly used by the Indians, consisted of a decoction of the leaves of this plant. It contains caffein, and is still used in the Southern United States as a beverage.

Youth. Adolescence.

Youth'wort. Drosera rotundifolia.

Ypseloglossus, ip-sel-o-glos'sus. Basioglossus.

Yrides, ir'id-ees. Orpiment.

Y. s. Abbr. for yellow spot.

Ysam'bra. An ancient Spanish poison, of which hellebore formed the greatest part.

Ys'ope. Hyssopus.

Yttria, it'tre-ah. An earth named from Ytterby, Sweden, where it was discovered.

Yttrif'erous. Relating to or containing yttria.

Yt'trium. A metal, the base of yttria. It is of a dark-gray color, never occurs free in nature, and very little is known concerning its properties.

Yuc'ca. Genus of Liliaceæ. Bear-grass. Spanish bayonet. **Y. filamento'sa** grows in Southern U. S. A tincture of its root has been recommended in gonorrhœa. Adam's needle is a popular name for this plant.

Yulan'. Magnolia conspicua, a Chinese tree cultivated as an ornament in the United States.

Yux (by onomatopœia). Singultus.

Y-wer-a. See *Spirit.*

Z.

Zac'charum. Saccharum.

Za'el. Borosail.

Zaf'fran. Crocus.

Zaf'fre. Smalt.

Zam'bo. See *Mulatto* and *Sambo.*

Zamia integrifolia, zam'e-ah in-teg-re-fo'le-ah. See *Arrow root.* **Z. pu'mila,** see *Arrow root.*

Zan'na. A kind of Armenian bole, used by the ancients as a desiccative; also called zarnacha.

Zanthorrhiza apiifolia, zan-thor-rhe'za ap-e-e-fo'-le-ah. Xanthorrhiza apiifolia.

Zanthox'ylum. Xanthoxylum.

Zappa'nia nodiflo'ra (after Zappa, Italian botanist). Anacoluppa.

Zar. A variety of hysteria among the Abyssinian women.

Zarnacha, zar-nak'ah. Zanna.

Zar'sa. Smilax sarsaparilla.

Zarzaparilla, zar-zap-ar-il'lah. Smilax sarsaparilla.

Ze'a. A genus of Graminaceæ including several species growing in the United States. **Z. mays** (*zea* or *zeia,* ancient name of a sort of corn, *zao,* to live), *Indian corn, Corn, Turkey* or *Indian wheat, Maize* (ord. Gramineæ), a native of America, much used over the whole continent as an article of diet. It is ground for the same purposes as wheat, forming excellent bread. The fecula or starch—corn-starch, maizena—makes an agreeable aliment.

Zedoaria, zed-o-ah're-ah. Kæmpferia rotunda. **Z. lon'ga,** see *Kæmpferia.* **Z. rotun'da,** see *Kæmpferia.*

Zed'oary. Kæmpferia rotunda.

Zeis'mus. Term used to denote the condition of the system induced by the consumption of diseased maize as food.

Zelosis, zel-o'sis. Zelotypia.

Zelotypia, zel-o-typ'e-ah (*zelos,* love, *tupos,* form, model). Violent mental affection produced by the acknowledged or presumed infidelity of a beloved object, and the consequences of such affection—melancholy, mania, etc.

Ze'ma. Decoction.

Zen'ker's degenera'tion. Waxy degeneration of muscle-substance seen after acute febrile attacks.

Zeocriton distichum, za-ok'rit-on dis'tik-um (*zea,* corn, *krithe,* barley). Hordeum.

Zer'ma. Impetigo ulcerata.

Zer'na. Impetigo ulcerata.

Zerum'bet. Cassumuniar. **Z. root,** rhizome of Zinziber zerumbet; possesses carminative powers.

Ze'sis. Effervescence; decoction.

Zest. See *Citrus medica.*

Zestolusia, zes-to-lu'se-ah (*zestos,* ebullition, *luo,* to wash). Hot bath.

Zibe'bæ. See *Vitis vinifera.*

Zib'ethum. Civetta.

Zietris'ikite. A native paraffin of Moldavia; it is solid and wax-like.

Zim'mermann's cor'puscles. The blood-plaques.

Zinc. A metal obtained from calamine and blende. Its color is bluish-white; the fresh surface has considerable lustre, but is soon dulled, from the facility with which it oxidizes; hard; s. g. 6.8. Melts at 700° Fah., burns with a bright flame in a higher temperature, and is volatilized in the form of a white flocculent oxide. Its use in medicine is in the formation of several preparations. **Z., ac'etate of,** zinci acetas. **Z. bro'mide,** a white granular, odorless powder having neutral reaction, saline taste, and deliquescing rapidly; it has been employed as a remedy for epilepsy. **Z., but'ter of,** zinci chloridum. **Z., car'bonate of,** zinci carbonas præcipitatus. **Z., car'bonate of, impure,** calamina. **Z., chlo'ride of,** zinci chloridum. **Z. chrysophan'ate,** red powder used as an application to wounds. **Z. col'ic,** see *Zinci oxidum.* **Z., cy'anide of,** zinci cyanuretum. **Z., ferrocy'anate of,** zinci cyanuretum. **Z., ferrocy'anide of,** zinci ferrohydrocyanas. **Z., flow'ers of,** zinci oxidum. **Z., gran'ulated,** see *Zinc.* **Z. gynocar'date,** yellow powder, used in same cutaneous diseases in which gynocardic acid is employed. **Z., hydrocy'anate of,** zinci cyanuretum. **Z., i'odide of,** zinci iodidum. **Z., io'duret of,** zinci iodidum. **Z., lac'tate of,** zinci lactas. **Z. and mor'phia, double i'odide of,** prepared by boiling iodide of iodhydrate of morphia with water and zinc, after they have acted on each other for some days, filtering, and crystallizing. It is considered to combine the properties of morphia and the salts of zinc, and has been prescribed as an anodyne and antispasmodic; dose, a quarter of a grain. **Z. o'leate,** oleatum zinci; see *Oleate* and *Oleatum.* **Z. ox'ide,** zinci oxidum. **Z. ox'ide, commer'cial,** zinci oxidum venale. **Z. ox'ide, impure,** tutia. **Z. oxychlo'ride,** preparation of zinc employed by the dentists for temporary filling and in the treatment of sensitive dentine; made by mixing a concentrated solution of the chloride with oxide of zinc recently prepared by burning zinc. **Z. perman'ganate,** a crystalline deliquescent brownish salt; used as an astringent and antiseptic locally; employed in urethritis. **Z. phos'phate,** zinci phosphas. **Z. phos'phide,** zinci phosphidum; grayish-black powder or in very small crystalline fragments. It is used in various forms of nervous diseases as a substitute for phosphorus; dose, gr. $\frac{1}{20}$ to gr. $\frac{1}{4}$. **Z. sal'icylate,** a crystalline salt derived from reaction between salicylic acid and zinc oxide. It is used as an antiseptic and astringent. **Z. and strych'nia, double i'odide of,** prepared by digesting for several days in hot water iodide of iodhydrate of strychnia and zinc, filtering, and crystallizing; used in the same cases as strychnia. **Z. sul'phate,** zinci sulphas. **Z. sulphocar'bolate,** see *Sulphocarbolate.* **Z. sulphy'drate,** white substance employed in chronic eczema, psoriasis, and parasitic skin diseases. **Z. vale'rianate,** zinci valerianas.

Zin'chum. Zincum.

Zin'ci ace'tas (Ph. U. S.) *Acetate of zinc,* $Zn(C_2H_3O_2)_2 3H_2O$. Frequently used to form a gently astringent wash in ophthalmia and other local inflammations, as an injection in gonorrhœa, in strength of gr. j–ij to f℥j of distilled water. **Z. bro'midum,** bromide of zinc, $ZnBr_2$; made by dissolving zinc in solution of hydrobromic acid; white soluble granular powder; has been used in epilepsy. **Z. carbo'nas impu'rus,** calamina. **Z. carbo'nas præcipita'tus** (Ph. U. S.), *Precipitated carbonate of zinc;* used to prepare the zinci oxidum. **Z. carbo'nas præpara'tus,** calamina præparata. **Z. chlore'tum,** zinci chloridum. **Z. chlo'ridi liquor,** see *Burnett's disinfecting liquid.* **Z. chlo'ridum** (Ph. U. S.), *Chloride* or *Chloruret of zinc;* it is very deliquescent in the air, forming the *Butter of zinc.* Chloride of zinc is a powerful escharotic, and is the basis of different caustic applications; see *Pasta zinci chloridi.* It is much employed as an effective antiseptic; see *Burnett's disinfecting liquid.* **Z. chlorure'tum,** Z. chloridum. **Z. cyanure'tum,** *Cyanide* or *Hydrocyanate of zinc.* (Salt formed by adding sulphate of zinc to hydrocyanate of potassium so long as any precipitate is thrown down. When dried and calcined at a low heat, the product is a mixture of cyanuret of zinc and potassium.) It has been recommended in nervous cardialgia; dose, gr. $\frac{1}{16}$–$\frac{1}{12}$. It is chiefly used as a caustic, one part of the chloride being mixed with four, three, or two parts of flour, according to the desired strength, and a few drops of water added to form a paste. **Z. ferrohydrocy'anas,** *Ferrocyanide* or *Ferrohydrocyanate of zinc,* recommended in the same cases as the last preparation. **Z. hydrocy'anas,** zinci cyanuretum. **Z. io'didum,** *Iodide* or *Ioduret of zinc;* an ointment com-

posed of a drachm to an ounce of lard has been used in cases where the external use of iodide of potassium is indicated. **Z. iodure'tum,** Z. iodidum. **Z. lac'tas,** *Lactate of zinc;* white soluble salt, given in epilepsy in doses of two grains, gradually increased to ten. **Z. nix,** zinci oxidum. **Z. ox'idum,** *Oxide of zinc, Flowers of zinc* (procured by exposing precipitated carbonate of zinc to a low-red heat, so as to drive off the carbonic acid and water; Ph. U. S.); said to be tonic and antispasmodic; externally detergent and desiccative. Employed in epilepsy, chorea, etc. Usual dose, gr. ij–x. For its external use in erysipelas and other affections, see *Unguentum zinci.* This oxide is said to be capable of producing a colic resembling lead colic, and called *Zinc colic.* **Z. ox'idum impu'rum,** tutia. **Z. ox'idum vena'le** (Ph. U. S.), *Commercial oxide of zinc;* a pure oxide of zinc, employed for making zinci acetas. **Z. phos'phas,** *Phosphate of zinc;* a white insoluble salt, employed in insanity occurring in convalescence from fevers, epilepsy, etc.; dose, in pill, one to three grains. **Z. phos'phidum,** zinc phosphide. **Z. prus'sias,** zinci cyanuretum. **Z. sal'icylas,** zinc salicylate. **Z. sul'phas** (Ph. U. S.), *Sulphate of zinc, White vitriol, White copperas;* sulphate of zinc is in white, semitransparent, efflorescent crystals, soluble in three parts of water at 60°. It is emetic, tonic, antispasmodic, and, externally, astringent; dose of the sulphate as an emetic, gr. x–xxx; as a tonic, gr. j to ij; used externally as a collyrium, gr. j to water f℥j. **Z. sulphocar'bolas,** $Zn(C_6H_5So_4)_2$, H_2O. See *Sulphocarbolate.* **Z. valeria'nas,** *Valerianate* or *Valerate of zinc;* salt formed by saturating valerianic acid with freshly-prepared carbonate of zinc, or by double decomposition of valerianate of sodium and sulphate of zinc; Ph. Br.); in pure white pearly scales; recommended as a tonic in neuralgic diseases, epilepsy, etc.; dose, one or two grains several times a day.

Zincic, zin'sik. Relating to zinc.

Zincif'erous (*zincum, fero,* to bear). Containing or relating to zinc.

Zincite, zin'site. A form of reddish zinc ore.

Zincoid, zin'koid. Resembling zinc.

Zin'cum. Zinc. **Z. ace'ticum,** zinci acetas. **Z. borus'sicum,** zinci cyanuretum. **Z. broma'tum,** zinc bromide. **Z. calcina'tum,** zinci oxidum. **Z. carbon'icum,** zinc carbonate. **Z. chlora'tum,** zinci chloridum. **Z. cyanogena'tum,** zinci cyanuretum. **Z. ferrohydrocyan'icum,** zinci ferrohydrocyanas. **Z. granula'tum,** see *Zinc.* **Z. ioda'tum,** zinci iodidum. **Z. lac'ticum,** zinc lactate. **Z. muriat'icum,** zinci chloridum. **Z. salicyl'icum,** zinc salicylate. **Z. sulphophenyl'icum,** zinc sulphocarbolate. **Z. valerian'icum,** zinci valerianas. **Z. vitriola'tum,** zinci sulphas. **Z. zoö'ticum,** zinci cyanuretum.

Zinc-white. Oxide of zinc, crude and impure.

Zin'giber. Amomum zingiber. **Z. al'bum,** Amomum zingiber. **Z. cassumu'niar,** see *Cassumuniar.* **Z. commu'ne,** Amomum zingiber. **Z. fus'cum,** Amomum zingiber. **Z. German'icum,** Arum maculatum. **Z. ni'grum,** Amomum zingiber. **Z. officina'le,** Amomum zingiber. **Z. purpu'reum,** see *Cassumuniar.* **Z. spu'rium,** see *Cassumuniar.* **Z. zerum'bet,** see *Cassumuniar.*

Zingibera'ceæ. Natural order of plants, including zingiber, renealmia, alpinia, and curcuma. They all possess aromatic and stimulant properties.

Zingib'eris ra'dix con'dita. See *Amomum zingiber.* **Z. ra'dix con'dita ex In'diâ alla'ta,** see *Amomum zingiber.*

Zink. Zinc.

Zin'kum. Zinc.

Zinn, lig'ament of. That portion of the tendon of the recti muscles of the eye which is free from attachment to the sheath of the optic nerve. **Z., zo'nule** or **zone of,** anterior portion of hyaloid membrane around the margin of the crystalline lens.

Zint. Zincum.

Zin'ziber. Amomum zingiber.

Zi'phac. Peritoneum.

Zir'bus. Epiploon. **Z. adipi'nus,** gastrocolic epiploon.

Zir'con. A mineral compound of zirconia and silica; crystalline, transparent, sometimes red. The red crystals are used as jewelry, being called hyacinths.

Zirco'nia. One of the primitive earths. Chemically, oxide of zirconium.

Zir'conite. Name used for grayish or brownish crystals of zircon.

Zirco'nium. Metallic base of zirconia; one of the elementary substances of nature; strongly resembling silicon in its properties, and assuming various allotropic forms.

Zitt'man's decoc'tion. Decoctum Zittmanni.

Ziza'nia aquat'ica. *Wild rice, Canada rice, Water oats;* ord. Gramineæ; called by the Indians Menomene; grows abundantly on the marshy margins of the northern lakes and waters of the upper branches of the Mississippi. The grain resembles oats.

Ziz'yphus ju'juba. See *Jujube.* **Z. lo'tus,** cultivated in Northern Africa for its fruit. **Z. nit'ida,** see *Jujube.* **Z. œnop'lia,** ord. Rhamnaceæ; common all over India. Fruit is eaten by the natives. Decoction of the bark of the fresh root is used to promote the healing of fresh wounds. **Z. sati'va,** see *Jujube.* **Z. sylves'tris,** see *Jujube.* **Z. vulga'ris,** native of Asia Minor; valued for its fruit.

Zoagria, zo-ag're-ah (*zoe,* life, *agreo,* to catch up). Saving and preservation of life—zoösis; reward for preserving life—zostrum. Votive offerings hung up in temples for a life saved.

Zoanthro'pia (*zoon, anthropos,* man). A species of monomania in which the patient believes himself transformed into an animal. Lycanthropia and cynanthropia belong to this species of monomania.

Zoa'ra. Insomnia.

Zo'e. Life.

Zoetrope, zo'e-trope (*zoe,* life, *trepo,* to turn). Instrument devised to revolve a series of pictures, giving to the eye the appearance of an animal moving. Each picture portrays phases of the act of motion.

Zograph'ia. Zoographia.

Zoïatri'a (*zoon, iatreia,* medical treatment). Veterinary art.

Zoïatrus, zo-e-at'rus (*zoon, iatros,* a physician). Hippiater; veterinary surgeon; one who attends to diseases of animals.

Zoïs'mus or **Zo'ism.** Animality.

Zoll'ner's lines. Parallel lines intersected obliquely by shorter ones, giving to the eye the appearance that they are not parallel.

Zomidin, zo'mid-in. One of the component parts of beef extract.

Zomid'ium (dim. of **Zomos,** soup). Broth; see *Jus.*

Zo'mos (*zomos*). Consommé. See *Broth.*

Zo'na (*zone,* a girdle). Herpes zoster. **Z. arcua'ta,** internal zone of basilar membrane. **Z. cartilagin'ea,** see *Lamina spiralis.* **Z. castita'tis,** hymen. **Z. choria'cea,** see *Lamina spiralis.* **Z. cilia'ris,** ciliary zone. **Z. coch'leæ,** see *Lamina spiralis.* **Z. coria'cea,** see *Lamina spiralis.* **Z. denticula'ta,** lamina denticulata. **Z. fascicula'ta,** see *Zona reticularis.* **Z. gangliona'ris,** ganglion spirale. **Z. glomerulo'sa,** see *Zona reticularis.* **Z. ig'nea,** herpes zoster. **Z. incer'ta,** anterior portion of the reticular formation situate beneath the optic thalamus. **Z. læ'vis,** Z. arcuata. **Z. media'na,** see *Lamina spiralis.* **Z. membrana'cea,** see *Lamina spiralis.* **Z. mol'lis,** see *Lamina spiralis.* **Z. ner'vea,** see *Lamina spiralis.* **Z. orbicula'ris,** circular fibres of the capsule of hip-joint. **Z. os'sea,** see *Lamina spiralis.* **Z. pectina'ta,** see *Lamina spiralis.* **Z. pellu'cida,** *Vitellary membrane, Chorion* (of some); the membrane surrounding the yolk in the mammalia; so called on account of its breadth and peculiar transparency. **Z. radia'ta,** name applied to Z. pellucida on account of its radiating pore-channels. **Z. reticula'ris,** the inner layer, as *Zona glomerulosa* is the outer layer, of the stroma of the cortical part of the suprarenal capsule; the main portion is *Zona fasciculata.* **Z. serpigino'sa,** herpes zoster. **Z. tec'ta,** inner part of the membranous spiral lamina of the internal ear, which is

covered by the organ of Corti. **Z. tendino'sa**, the whitish circle around each auriculoventricular orifice of the heart. **Z. Valsal'væ**, membranous spiral lamina. **Z. vesicula'ris**, see *Lamina spiralis*. **Z. virginita'tis**, hymen.

Zonæsthe'sia (*zona*, *aisthesis*, feeling). Morbid sensation of constriction of a part as by a rope or band.

Zo'nary. Name given to placenta of carnivora which forms a broad circular band around the chorion.

Zone. Cincture; girdle; the waist; herpes zoster. **Z. of Hal'ler**, ciliary zone. **Z., sclerot'ic**, sclerotic zone. **Z. of Zinn**, see *Zinn, zone of*.

Zones of bas'ilar mem'brane. These consist of an inner and outer zone; the former extending from the labium tympanicum to the base of the rods of Corti, while the latter extends from the rods of Corti to the ligamentum spirale.

Zo'nula (dim. of **Zona**) **cartilagin'ea.** Crista spiralis. **Z. cilia'ris**, vascular layer between margin of the retina and periphery of the crystalline lens. **Z. coch'leæ**, see *Lamina spiralis*. **Z. Hilda'ni**, cingulum Hildani. **Z. ner'vea lam'inæ spira'lis membrana'ceæ**, crista spiralis. **Z. os'sea lam'ina spira'lis**, lamina spiralis ossea. **Z. of Zinn**, zone of Zinn.

Zon'ular cat'aract. Form of cataract in which opaque layers exist between the cortex and nucleus, alternating with clear transparent layers; also called lamellar cataract.

Zoëam'ylin (*zoon*, *amylum*, starch). Glycogenic matter.

Zoöbiologia (zo-o-be-o-loj'e-ah) or **Zoöbiology**, zo-o-bi-ol'o-je (*zoon*, *bios*, life, *logos*, treatise). See *Physiology*.

Zoöbiotism, zo-o-bi'o-tism (*zoon*, *bios*, life). The life of animals; animal life.

Zoöcam'bium. Vital essence, fluid, or principle; blastema.

Zoöchemia, zo-o-kem-e'ah. Animal chemistry.

Zoöchem'ical or **Zoöchym'ical.** Appertaining or having relation to animal chemistry.

Zoöch'emy or **Zoöchymy**, zo-ok'im-e. Animal chemistry.

Zoö'des (*zoon*, *odes*). Relating to an animal.

Zoödynam'ia. The vital force or power of animals.

Zoögenesis, zo-o-jen'es-is. Generation of animals; breeding.

Zoögeny, zo-oj'en-e (*zoon*, *gennao*, to beget). The doctrine of animal formation.

Zoöglœa, zo-og-le'ah (*zoon*, *gloios*, glue). A developmental stage of certain micro-organisms, during which they present themselves as small masses surrounded by jelly-like material.

Zoögonia, zo-o-gon'e-ah (*zoe*, life, *gone*, production). Bearing or production of living young, in contradistinction to oviparous.

Zoögonology, zo-o-gon-ol'o-je (*zoon*, animal, *gone*, production). Doctrine of the origin and development of animal life.

Zoögonus, zo-og'o-nus. Producing living young. See *Zoögonia*.

Zoög'raphy (*zoon*, *graphe*, description). A description or natural history of animals.

Zoöhæmatine, zo-o-he'mat-een. Hæmatine.

Zoöhylas, zo-o-hil'as (*zoon*, *hule*, matter). Animal matter.

Zoöhyl'ica concremen'ta. Concretions formed of animal matter.

Zoöiasis, zo-o-e'as-is (*zoon*, *iasis*, curation). Veterinary art.

Zo'öid (*zoon*, *eidos*, resemblance). Resembling or belonging to an animal; a living cell, for instance.

Zo'ölite or **Zoölith**, zo'o-lith (*zoon*, animal, *lithos*, stone). Term applied to petrified fossil remains.

Zoölithiferous, zo-o-lith-if'er-us (*zoolith*, *fero*, to bear). Fossil-bearing; containing fossil relics of animals.

Zoölogical, zo-o-loj'ik-al (*zoon*, *logos*, a description). Relating or appertaining to the natural history of animals.

Zoölogist, zo-ol'o-jist. One skilled in the natural history of animals.

Zoöl'ogy. The natural history of animals.

Zoömagnetism, zo-o-mag'net-izm. Animal magnetism.

Zoömephitism, zo-o-mef'it-ism. Development of foul vapors from decomposing animal matter.

Zoömycus, zo-om'ik-us (*zoon*, *mukos*, mucus). Mucus.

Zoömyxa, zo-o-miks'ah (*zoon*, *muxa*, mucus). Mucus.

Zoön, zo'on. Animal.

Zoönomia, zo-on-o'me-ah (*zoon*, *nomos*, law). *Zoönomy.* The law governing the organic actions of animals in general; animal physiology.

Zoönoses, zo-on'o-sees (*zoon*, *nosos*, disease). Diseases produced by morbid animal poisons; as hydrophobia, glanders, etc.

Zoönosology, zo-o-no-zol'o-je (*zoon*, *nosos*, disease, *logos*, description). The nosology of animals.

Zoöpathol'ogy (*zoon*, *pathos*, disease, *logos*, description). The pathology of animals.

Zoöphagous, zo-of'ag-us (*zoon*, *phago*, to eat). Feeding on animals; carnivorous.

Zoöpharmacology, zo-o-farm-ak-ol'o-je. Science of veterinary pharmacy.

Zoöphthalmus, zo-of-thal'mus (*zoon*, *ophthalmos*, eye). Hydrophthalmia.

Zoöphysiol'ogy. Animal physiology; zoonomia.

Zoöphyte, zo'o-fite (*zoon*, *phuton*, plant). *Animal plant.* The lowest class of animals; transition between the animal and the vegetable kingdoms.

Zoöphytology, zo-o-fi-tol'o-je. Treatise on zoophytes.

Zoöpsychology, zo-o-si-kol'o-je. The psychology of animals. Doctrine of the existence of an intellect in animals.

Zoö'sis. Animation; zoagria.

Zoösper'mata or **Zoösperms**, zo'o-spurms. Spermatozoa.

Zoöspores, zo'o-spores. The spore of a zoophyte.

Zoötechnics, zo-o-tek'niks (*zoon*, *tekne*, art). Art of animal culture.

Zoöthap'sis (*zoe*, life, *thapto*, to inter). Burial alive; premature interment.

Zoötherapy, zo-o-ther'ap-e. Animal therapeutics.

Zoötic, zo-o'tik. Term applied to rock or earth containing remains of animals.

Zoöt'ic ac'id. Prussic acid.

Zoötocia, zo-o-to'se-ah (*zoe*, life, *tokos*, birth). Viviparous generation; bearing or production of living young.

Zoötomist, zo-ot'o-mist (*zoon*, *tome*, incision). One who dissects animals.

Zoötomy, zo-ot'o-me. *Theriotomy, Comparative anatomy.* The anatomy of animals; animal anatomy.

Zoötrophic, zo-o-trof'ik (*zoon*, *trophe*, nourishment). Relating to the nourishment of animals, as Z. powders, powders intended to improve the general nutrition.

Zopis'sa (*zoos*, living, *pissa*, pitch). See *Pinus sylvestris*.

Zo'pyron (*zoo*, to be alive, *pur*, fire). Fomites.

Zoroche. Mountain sickness experienced on the Andes.

Zos'ter (a girth). Herpes zoster. **Z. auricula'ris**, herpes zoster of the ear.

Zostera marina, zos-ta'rah mar-e'nah. Pila marina. **Z. marit'ima**, pila marina.

Zosteric, zos-ter'ik. Relating to herpes zoster.

Zo'zar, Zuc'aro, Zuc'carum, Zu'char, Zu'charum, or **Zu'chra.** Saccharum.

Zulapium, zu-lap'e-um. Julep.

Zygapophysis, zig-ap-of'is-is (*zugon*, yoke, *apophysis*). See *Vertebræ*.

Zygolabialis, zyg-o-lab-e-al'is. Zygomaticus minor.

Zygoma, zig-o'mah (*zugon*, yoke). Malar bone; zygomatic process.

Zygomat'ic. *Jugal.* Relating to the zygoma or cheek-bone. **Z. arch**, see *Zygomatic process*. **Z. bone**, malar bone. **Z. crest**, portion of great wing of sphenoid articulating with malar bone. **Z. fos'sa**, the space included between the posterior margin of the outer

ala of the pterygoid process and the crista which descends from the malar tuberosity to the superior alveolar margin. **Z. glands**, internal maxillary glands. **Z. head**, term applied by Henle to the zygomaticus minor muscles. **Z. mus'cles** are two in number: 1. *Zygomaticus major*, situate obliquely at the fore part and sides of the face; small rounded muscle, arising from the outer surface of the malar bone, and inserted at the commissure of the lips, which it raises and draws outward. It acts principally in laughing. 2. *Zygomaticus minor*, does not always exist; situate on the inner side of the last; arises from the outer surface of the malar bone, and is inserted at the corner of the mouth, or rather into the upper lip, which it raises and draws outward. **Z. nerves**, branches of facial to zygomatic muscles. **Z. pro'cess**, *Malar* or *Jugal process*, arises from the outer surface of the temporal bone by two roots, one transverse, the other longitudinal; between them is the glenoid cavity. The process passes forward and is articulated with the posterior angle of the malar bone, with which it forms a bony bridge called the zygomatic arch. The cavity beneath the bridge is sometimes called the zygoma. **Z. spine**, sharp angles on the upper posterior surface of the zygomatic tuberosity. **Z. sur'face**, surface of superior maxilla behind zygomatic process. **Z. su'ture**, suture between the zygomatic parts of the temporal and cheek bones, slants obliquely downward and backward. **Z. tuberos'ity**, rough surface on portion of superior maxilla articulating with the malar bone. **Z. width**, distance between the most prominent portions of the zygomatic arches.

Zygomat'ico-angula'ris. Small muscle arising from the malar bone near the orbital margin and inserted into the fascia about the external angle of the eye.

Zygomat'ico-auric'ular in'dex. Numerical relation between the biauricular and bizygomatic diameters of the skull, the former being taken as 100.

Zygomat'icum poste'rius. Zygomatico-temporal foramen.

Zygomat'icus. Zygomatic.

Zygomax'illary point. Inferior point of zygomaxillary suture.

Zy'go-or'bital point. Superior point of zygomaxillary suture.

Zygophyl'lum faba'go (*zugos*, yoke, pair, *phullon*, leaf). Ord. Zygophyllaceæ. A Syrian and Mauritanic plant having an acrid and bitter taste; vermifuge.

Zy'lonite. Celluloid.

Zyme, ze'ma (*zume*, ferment). Ferment.

Zymetology, zi-met-ol'o-je (*zume*, ferment, *logos*, treatise). A treatise on fermentation; doctrine of fermentation processes.

Zymic, zi'mik, Relating to fermentation.

Zymine, zi'meen. Specific virus of zymotic disease.

Zymogen, zi'mo-jen. A substance which produces ferments. Such a principle exists in the pancreas, giving rise to trypsin. Micro-organisms which produce fermentation are called *Zymogenes*.

Zymogenic, zi-mo-gen'ic. Term applied to any substance producing ferments.

Zymology, zi-mol'o-je (*zyme*, *logos*, discourse). The science of fermentation. Treatise on fermentation processes.

Zymolysis, zim-ol'is-is (*zyme*, *lusis*, solution). Decomposition effected by action of ferments.

Zymoma, zim-o'mah. Ferment.

Zymophytes, zi'mo-fites. Ferments composed of bacteria, liberating fatty acids from neutral fats.

Zymosimeter, zi-mo-sim'et-ur (*zumosis*, fermentation, *metron*, measure). Instrument to measure the degree of fermentation.

Zymosis, zim-o'sis. Fermentation. See *Zymotic*.

Zymotic, zi-mot'ik. Relating or appertaining to fermentation. **Z. disease**, any epidemic, endemic, contagious, or sporadic affection produced by a morbific principle acting on the organism similar to a ferment —as the major exanthemata. The word zymoses has been used by some to signify such affections. Zymotic diseases comprise diseases epidemic, endemic, communicable, inoculable, capable of propagation from existing foci, or of generation; induced by a specific material or poison, or by the want or bad quality of food. This class includes four orders—miasmatic, enthetic, dietic, and parasitic diseases. **Z. prin'ciples**, certain matters which, of themselves or by their transformation, propagate zymotic diseases, as variola, typhus, syphilis, etc. Taking their names from the diseases which they produce, they are called varioline, typhine, syphiline, etc. **Z. the'ory of disease**, see *Fermentation theory*.

Zythogala, zith-og'al-ah (*zythus*, cerevisia, *gala*, milk). Posset.

Zythum (zith'um) or **Zythus**, zith'us. Cerevisia.

LEA BROTHERS & CO.'S

CLASSIFIED CATALOGUE OF

Medical and Surgical Publications.

IN ASKING the attention of the profession to the works advertised in the following pages, the publishers would state that no pains are spared to secure a continuance of the confidence earned for the publications of the house by their careful selection and accuracy and finish of execution.

The printed prices are those at which books can generally be supplied by booksellers throughout the United States, who can readily procure for their customers any works not kept in stock. Where access to bookstores is not convenient, books will be sent by mail by the publishers postpaid on receipt of the printed price, and as the limit of mailable weight has been removed, no difficulty will be experienced in obtaining through the post-office any work in this catalogue. No risks however are assumed either on the money or on the books, and no publications but our own are supplied, so that gentlemen will in most cases find it more convenient to deal with the nearest bookseller.

Practical Medical Periodicals.

THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES, Monthly, $4.00 per annum.

THE MEDICAL NEWS, Weekly, $4.00 per annum.

To one address, postpaid, ***$7.50*** *per annum.*

THE MEDICAL NEWS VISITING LIST (4 styles, see page 2), $1.25. With either or both above periodicals, in advance, 75 cents.

THE YEAR-BOOK OF TREATMENT (see page 13), $1.50. With either JOURNAL or NEWS, or both, 75 cents. Or JOURNAL, NEWS, VISITING LIST AND YEAR-BOOK, $8.50, in advance.

THE MEDICAL NEWS.

Subscription Price Reduced to $4.00 Per Annum.

BY KEEPING closely in touch with the needs of the active practitioner, THE NEWS has achieved a reputation for utility so extensive as to render practicable its reduction in price from five to **Four Dollars** per annum. It is now by far the cheapest as well as the best large weekly medical journal published in America. Employing all the recognized resources of modern journalism, such as

(*Continued on next page.*)

THE MEDICAL NEWS—*Continued.*

the cable, telegraph, resident correspondents, special reporters, etc., THE NEWS furnishes in the 28 quarto pages of each issue the latest and best information on subjects of importance and value to practitioners in all branches of medicine. The foremost writers, teachers and practitioners of the day furnish original articles, clinical lectures and notes on practical advances; the latest methods in leading hospitals are promptly reported; a condensed summary of progress is gleaned each week from a large exchange list, comprising the best journals at home and abroad; a special department is assigned to abstracts requiring full treatment for proper presentation; editorial articles are secured from writers able to deal instructively with questions of the day; books are carefully reviewed; society proceedings are represented by the pith alone; regular correspondence is furnished by gentlemen in position to know all occurrences of importance in the district surrounding important medical centres, and minor matters of interest are grouped each week under news items. Everything is presented with such brevity as is compatible with clearness, and in the most attractive manner. In a word THE MEDICAL NEWS is a crisp, fresh weekly newspaper and as such occupies a well-marked sphere of usefulness, distinct from and complementary to the ideal monthly magazine, THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES.

The American Journal of the Medical Sciences

PUBLISHED MONTHLY AT $4.00 PER ANNUM.

For Commutation Rates see preceding page.

THE AMERICAN JOURNAL will enter with 1894 upon its seventy-fifth year, still maintaining the foremost place among the medical magazines of the world. A vigorous existence during two and a half generations of men amply proves that it has always adapted itself to meet fully the requirements of the time.

Being the medium chosen by the best minds of the profession during this period for the presentation of their ablest papers, THE AMERICAN JOURNAL has well earned the praise accorded it by an unquestioned authority—"from this file alone, were all other publications of the press for the last fifty years destroyed, it would be possible to reproduce the great majority of the real contributions of the world to medical science during that period." Original Articles, Reviews and Progress, the three main departments into which the contents of THE JOURNAL are divided, will be found to possess still greater interest than in the past. The brightest talent on both sides of the Atlantic is enlisted in its behalf, and no effort will be spared to make THE JOURNAL more than ever worthy of its position as the representative of the highest form of medical thought.

The Medical News Visiting List for 1894.

Published in four styles, Weekly (dated for 30 patients); Monthly (undated, for 120 patients per month; Perpetual (undated, for 30 patients weekly per year); and Perpetual (undated, for 60 patients weekly per year). The 60-patient Perpetual consists of 256 pages of assorted blanks. The first three styles contain 32 pages of important data and 176 pages of assorted blanks. Each style is in one wallet-shaped book, leather-bound, with pocket, pencil, rubber, and catheter-scale. Price, each, $1.25.

For convenience and elegance it is not surpassable.—*Obstetric Gazette.*

This list is all that could be desired. It contains a vast amount of useful information, especially for emergencies, and gives good tables of doses and therapeutics.—*Canadian Practitioner.*

A NEW MEDICAL DICTIONARY. READY VERY SHORTLY.

THE STUDENTS'

Dictionary of Medicine

AND THE ALLIED SCIENCES.

COMPRISING THE PRONUNCIATION, DERIVATION AND FULL EXPLANATION OF MEDICAL TERMS; TOGETHER WITH MUCH COLLATERAL DESCRIPTIVE MATTER, NUMEROUS TABLES, ETC.

By ALEXANDER DUANE, M.D.,
Assistant Surgeon to the New York Ophthalmic and Aural Institute; Reviser of Medical Terms for Webster's International Dictionary.

In one Square Octavo Volume of about 600 pages.

THIS handy volume gives succinct but full information concerning every word likely to be met with by students or physicians in the course of medical reading. Especial care has been devoted to making the definitions clear and complete, this main service of a dictionary being expanded to include much descriptive and explanatory matter under headings which would be inadequately represented by a definition, however full. Thus under Diseases are given their causation, symptoms and treatment; under important Organs, an outline of their structure and functions; under each Drug, its action, uses and preparations. Extensive tables of Bacilli, Muscles, Arteries, Veins, etc., are included and the pronunciation and derivation of all words are given in a manner to be readily understood. Each page contains an extraordinary amount of matter set in type of great clearness and beauty. In every detail DUANE'S *Medical Dictionary* has been planned to furnish to the student a standard guide to medical terms on a level with the existing advanced condition of the medical sciences.

The National Medical Dictionary,

INCLUDING ENGLISH, FRENCH, GERMAN, ITALIAN AND LATIN TECHNICAL TERMS USED IN MEDICINE AND THE COLLATERAL SCIENCES, AND A SERIES OF TABLES OF USEFUL DATA.

By JOHN S. BILLINGS, M.D., LL.D., Edin. and Harv., D.C.L., Oxon.,
Member of the National Academy of Sciences, Surgeon U. S. A., etc.

In Two very Handsome Royal Octavo Volumes containing 1574 Pages, with Two Colored Plates. Per Volume—cloth, $6.00; leather, $7.00; half Morocco, marbled edges, $8.50.

For sale by subscription only. Specimen pages on application. Address the Publishers.

Its scope is one which will at once satisfy the student and meet all the requirements of the medical practitioner. The work is remarkable, too, for its fulness. It presents to the English reader a thoroughly scientific mode of acquiring a rich vocabulary and offers an accurate and ready means of reference in consulting works in any of the three modern continental languages which are richest in medical literature. Apart from the boundless stores of information which may be gained by the study of a good dictionary, one is enabled by the work under notice to read intelligently any technical treatise in any of the four chief modern languages. There cannot be two opinions as to the great value and usefulness of this dictionary as a book of ready reference for all sorts and conditions of medical men. So far as we have been able to see, no subject has been omitted, and in respect of completeness it will be found distinctly superior to any medical lexicon yet published.—*The London Lancet*, April 5, 1890.

Hoblyn's Dictionary of Medicine.

A Dictionary of the Terms Used in Medicine and the Collateral Sciences. By RICHARD D. HOBLYN, M.D. Revised, with numerous additions, by ISAAC HAYS, M.D., late Editor of the American Journal of the Medical Sciences. In one large royal 12mo. volume of 520 double-columned pages. Cloth, $1.50; leather, $2.00.

NEW (21ST) EDITION. THOROUGHLY REVISED. JUST READY.

DUNGLISON'S DICTIONARY OF MEDICAL SCIENCE.

CONTAINING A FULL EXPLANATION OF THE VARIOUS SUBJECTS AND TERMS OF ANATOMY, PHYSIOLOGY, MEDICAL CHEMISTRY, PHARMACY, PHARMACOLOGY, THERAPEUTICS, MEDICINE, HYGIENE, DIETETICS, PATHOLOGY, SURGERY, OPHTHALMOLOGY, OTOLOGY, LARYNGOLOGY, DERMATOLOGY, GYNECOLOGY, OBSTETRICS, PEDIATRICS, MEDICAL JURISPRUDENCE AND DENTISTRY, ETC., ETC.

By ROBLEY DUNGLISON, M.D., LL.D.

Late Professor of Institutes of Medicine in the Jefferson Medical College of Philadelphia.

Edited by RICHARD J. DUNGLISON, A.M., M.D.

New (21st) edition.

Thoroughly revised, greatly enlarged and improved, with the

PRONUNCIATION, ACCENTUATION, AND DERIVATION OF THE TERMS.

In one magnificent imperial octavo volume of 1200 pages.

Cloth, $7 00; leather, $8.00.

THIS great medical dictionary, which has been for more than two generations the standard of the English-speaking, race is now, after several years of incessant labor, issued in a thoroughly revised and greatly enlarged and improved edition. The new words and phrases aggregate 44,000, and by themselves would fill a large volume. Space has been gained by the excision of everything obsolete, and the page has been much enlarged, so that while the new edition contains far more matter than its predecessor, the whole is accommodated within a volume convenient for the hand.

The revision has not only covered every word but it has resulted in a number of important new features designed to confer on the work the utmost usefulness, and to make it answer the most advanced demands of the times.

Pronunciation has been introduced throughout by means of a simple and obvious system of phonetic spelling. At a glance the proper sound of a word is clearly indicated and thus a most important desideratum is supplied.

Derivation affords the utmost aid in recollecting the meanings of words, and gives the power of analyzing and understanding those which are unfamiliar. It is here indicated in the simplest manner. Greek words are spelled with English letters, and thus placed at the command of those unfamiliar with the Greek alphabet.

Definitions, the essence of a dictionary, are clear and full, a characteristic in which this work has always been preëminent. In this edition much explanatory and encyclopedic matter has been added, especially upon subjects of practical value. Thus under the various Diseases will be found their symptoms, treatment, etc.; under Drugs their doses and effects, under Poisoning the symptoms, treatment and antidotes, etc., etc. A vast amount of information has been clearly and conveniently condensed into tables in the alphabet.

The typography is thoroughly in keeping with the excellence of the literary material. In a word, both the editor and the publishers have felt that the world-wide reputation of *Dunglison's Dictionary* has rendered it incumbent on them to ensure that in its remodelled and enlarged shape it should be found equal to all that the student and practitioner can expect from such a work.

Lea Brothers & Co., Publishers, 706, 708 & 710 Sansom Street, Philadelphia.

New (Thirteenth) Edition. Ready in a Few Days.

GRAY'S ANATOMY,

IN COLORS OR IN BLACK.

Anatomy, Descriptive and Surgical.

By HENRY GRAY, F.R.S.,
LECTURER ON ANATOMY AT ST. GEORGE'S HOSPITAL, LONDON.

Edited by T. PICKERING PICK, F.R.C.S.,
Surgeon to and Lecturer on Anatomy at St. George's Hospital, London, Examiner in Anatomy, Royal College of Surgeons of England.

A NEW AMERICAN FROM THE THIRTEENTH ENLARGED AND IMPROVED LONDON EDITION.

In one imperial octavo volume of 1100 pages, with 635 large and elaborate engravings on wood.
Price of edition with illustrations in colors (see below): Cloth, $7.00; leather, $8.00.
Price of edition with illustrations in black: Cloth, $6.00; leather, $7.00.

SINCE 1857 *Gray's Anatomy* has been the standard work used by students of medicine and practitioners in all English-speaking races. So preëminent has it been among the many works on the subject that thirteen editions have been required to meet the demand. This opportunity for frequent revisions has been fully utilized and the work has thus been subjected to the careful scrutiny of many of the most distinguished anatomists of a generation, and thus a degree of completeness and accuracy has been secured which is not attainable in any other way. In no former revision has so much care been exercised as in the present to provide for the student all the assistance that a text-book can furnish.

The engravings have always formed a distinguishing feature of the work, and in the present edition the series has been enriched and rendered complete by the addition of many new ones. The large scale on which the illustrations are drawn and the clearness of the execution render them of unequalled value in affording a grasp of the complex details of the subject. As heretofore the name of each part is printed in the engraving, thus conveying to the eye at once the position, extent and relations of each organ, vessel, muscle, bone or nerve with a clearness impossible when figures on lines of reference are employed. Distinctive colors have been used to give additional prominence to the attachments of muscles, and to the veins, arteries and nerves. For the sake of those who prefer not to pay the slight increase in cost necessitated by the use of colors the volume is published also in black alone.

The illustrations thus constitute a complete and splendid series, which will greatly assist the student in forming a clear idea of Anatomy, and will also serve to refresh the memory of those who may find in the exigencies of practice the necessity of recalling the details of the dissecting-room. Combining, as it does, a complete Atlas of Anatomy with a thorough treatise on systematic, descriptive and applied Anatomy, the work will be found of great service to all physicians who receive students in their offices, relieving both preceptor and pupil of much labor in laying the groundwork of a thorough medical education.

As this work covers a more extended range of subjects than is customary in the ordinary text-books, giving not only the details necessary for the student, but also the application of those details to the practice of medicine and surgery, it furnishes both a guide for the learner and an admirable work of reference for the active practitioner. A few notices of the previous edition are appended.

A work which has had the lead of all other text-books on anatomy throughout the civilized world comes to hand in such beauty of execution and accuracy of text and illustration as more than to make good the large promise of the prospectus. It would be indeed difficult to name a feature wherein *Gray* could be mended or bettered, and it needs no prophet to see that the royal work is destined for many years to come to hold the first place among anatomical text-books. The work is published with black and colored plates. It is a marvel of book-making.—*American Practitioner and News.*

The most popular work on anatomy ever written.—*Journal of the American Medical Association.*

Gray's *Anatomy* is the most magnificent work upon anatomy which has ever been published in the English or any other language.—*Cincinnati Medical News.*

As the book now goes to the purchaser he is receiving the best work on anatomy that is published in any language.—*Virginia Medical Monthly.*

Gray's standard *Anatomy* has been and will be for years the text-book for students. The book needs only to be examined to be perfectly understood.—*Medical Press of Western New York.*

Human Monstrosities.

By BARTON C. HIRST, M.D., *Professor of Obstetrics in the University of Pennsylvania.* and GEORGE A. PIERSOL, M.D., *Professor of Anatomy and Embryology in the University of Pennsylvania.*

Magnificent folio, containing 220 pages of text, illustrated with 123 engravings and 39 full-page photographic plates from nature. In four parts, price, each, $5.00. Complete work just ready. Limited edition, for sale by subscription only. *Address the Publishers.*

We have before us the fourth and last part of the latest and best work on human monstrosities. This completes one of the masterpieces of American medical literature. Typographically and from an artistic standpoint, the work is unexceptionable. In this last and final volume is presented the most complete bibliography of teratological literature extant. No library will be complete without this magnificent work.—*Journal of the American Medical Association*, May 6, 1893.

It will take its place as a standard work on teratology in medical libraries, and it must always retain the honor of being the first of its kind written in the English language. —*The British Medical Journal*, May 27, 1893.

The authors have sought to present in a concise and convenient form a treatise on Teratology which the obstetrician and pathologist can consult for an explanation and classification of the graver anomalies in development occasionally met with in medical practice. So far as we know there has been hitherto no comprehensive work on the subject in the English language, the literature of the subject in English being scattered and not always easy of access. The authors of the work before us have placed the English-speaking profession greatly in their debt by undertaking what must have largely been a labor of love and by producing a work which certainly fills a gap in English medical literature.—*Boston Medical and Surgical Journal*, January 12, 1893.

This work promises to be one for which a place must be found in the library of every anatomist, pathologist, obstetrician, and teratologist. It is the joint production of an obstetrician, and an embryologist and histologist, and this fact makes it certain that both the obstetric and anatomical sides of the subject will be fully represented and described. The book promises to be one of the greatest value to the English-speaking medical world.—*Edinburgh Medical Journal*, April, 1892.

Allen's System of Human Anatomy.

A System of Human Anatomy, Including its Medical and Surgical Relations. For the use of Practitioners and Students of Medicine. By HARRISON ALLEN, M.D., Professor of Physiology in the University of Pennsylvania. With an Introductory Section on Histology by E. O. SHAKESPEARE, M.D., Ophthalmologist to the Philadelphia Hospital. Comprising 813 double-columned quarto pages, with 380 illustrations on 109 full-page lithographic plates, many of which are in colors, and 241 engravings in the text. In six Sections, each in a portfolio. Price, per Section, $3.50; also bound in one volume, cloth, $23.00; half Russia, $25.00. *For sale by subscription only. Address the Publishers.*

Holden's Landmarks, Medical and Surgical.

Landmarks, Medical and Surgical. By LUTHER HOLDEN, F.R.C.S., Surgeon to St. Bartholomew's and the Foundling Hospitals, London. Second American from the third and revised English edition, with additions by W. W. KEEN, M.D., Professor of Artistic Anatomy in the Penna. Academy of Fine Arts. In one 12mo. volume of 148 pages. Cloth, $1.00.

Clarke & Lockwood's Dissector's Manual.

The Dissector's Manual. By W. B. CLARKE, F.R.C.S., and C. B. LOCKWOOD, F.R.C.S., Demonstrators of Anatomy at St. Bartholomew's Hospital Medical School, London. In one pocket-size 12mo. volume of 396 pages, with 49 illustrations. Limp cloth, red edges, $1.50. See *Students' Series of Manuals*, page 30.

Treves' Surgical Applied Anatomy.

Surgical Applied Anatomy. By FREDERICK TREVES, F.R.C.S., Senior Demonstrator of Anatomy and Assistant Surgeon at the London Hospital. In one pocket-size 12mo. volume of 540 pages, with 61 illustrations. Limp cloth, red edges, $2.00. See *Students' Series of Manuals*, page 30.

Bellamy's Surgical Anatomy.

The Student's Guide to Surgical Anatomy: Being a Description of the most Important Surgical Regions of the Human Body, and intended as an Introduction to Operative Surgery. By EDWARD BELLAMY, F.R.C.S., Senior Assistant-Surgeon to the Charing-Cross Hospital. In one 12mo. volume of 300 pages, with 50 illustrations. Cloth, $2.25.

Wilson's Human Anatomy.

A System of Human Anatomy, General and Special. By ERASMUS WILSON, F.R.S. Edited by W. H. GOBRECHT, M.D., Professor of General and Surgical Anatomy in the Medical College of Ohio. In one large and handsome octavo volume of 616 pages, with 397 illustrations. Cloth, $4.00; leather, $5.00.

Cleland's Dissector.

A Directory for the Dissection of the Human Body. By JOHN CLELAND, M.D., Professor of Anatomy, Queen's College, Galway. 12mo. 178 pages. Cloth, $1.25.

HARTSHORNE'S HAND-BOOK OF ANATOMY AND PHYSIOLOGY. Second edition, revised. 12mo., 310 pages, 220 woodcuts. Cloth, $1.75.

HORNER'S SPECIAL ANATOMY AND HISTOLOGY. Eighth edition. In two octavo volumes of 1007 pages, with 320 woodcuts. Cloth, $6.00.

Draper's Medical Physics.

Medical Physics. A Text-book for Students and Practitioners of Medicine. By JOHN C. DRAPER, M.D., LL.D., Professor of Chemistry in the University of the City of New York. In one octavo volume of 734 pages, with 376 woodcuts, mostly original. Cloth, $4.00.

While all enlightened physicians will agree that a knowledge of physics is desirable for the medical student, only those actually engaged in the teaching of the primary subjects can be fully aware of the difficulties encountered by students who attempt the study of these subjects without a knowledge of either physics or chemistry. These are especially felt by the teacher of physiology.

It is, however, impossible for him to impart a knowledge of the main facts of his subject and establish them by reasons and experimental demonstration, and at the same time undertake to teach *ab initio* the principles of chemistry or physics. Hence the desirability, we may say the necessity, for some such work as the present one.

No man in America was better fitted than Dr. Draper for the task he undertook and he has provided the student and practitioner of medicine with a volume at once readable and thorough. Even to the student who has some knowledge of physics this book is useful, as it shows him its applications to the profession that he has chosen. Dr. Draper, as an old teacher, knew well the difficulties to be encountered in bringing his subject within the grasp of the average student, and that he has succeeded so well proves once more that the man to write for and examine students is the one who has taught and is teaching them. The book is well printed and fully illustrated, and in every way deserves grateful recognition.—*Montreal Med. Jour.*, July, 1890.

Chemistry and Physics. Cloth, $1.00. See *The Students' Quiz Series*, page 30.

Power's Human Physiology.—Second Edition.

Human Physiology. By HENRY POWER, M.B., F.R.C.S., Examiner in Physiology, Royal College of Surgeons of England. Second edition. In one 12mo. volume of 509 pages, with 68 illustrations. Cloth, $1.50. See *Students' Series of Manuals*, page 30.

Robertson's Physiological Physics.

Physiological Physics. By J. MCGREGOR ROBERTSON, M.A., M.B., Muirhead Demonstrator of Physiology, University of Glasgow. In one 12mo. volume of 537 pages, with 219 illustrations. Limp cloth, $2.00. See *Students' Series of Manuals*, page 30.

The title of this work sufficiently explains the nature of its contents. It is designed as a manual for the student of medicine, an auxiliary to his text-book in physiology, and it would be particularly useful as a guide to his laboratory experiments. It will be found of great value to the practitioner. It is a carefully prepared book of reference, concise and accurate, and as such we heartily recommend it.—*Journal of the American Medical Association*, Dec. 6, 1884.

Dalton on the Circulation of the Blood.

Doctrines of the Circulation of the Blood. A History of Physiological Opinion and Discovery in regard to the Circulation of the Blood. By JOHN C. DALTON, M.D., Professor Emeritus of Physiology in the College of Physicians and Surgeons, New York. In one handsome 12mo. volume of 293 pages. Cloth, $2.00.

Dr. Dalton's work is the fruit of the deep research of a cultured mind, and to the busy practitioner it cannot fail to be a source of instruction. It will inspire him with a feeling of gratitude and admiration for those plodding workers of olden times, who laid the foundation of the magnificent temple of medical science as it now stands.—*New Orleans Medical and Surgical Journal*, Aug. 1885.

Bell's Comparative Anatomy and Physiology.

Comparative Anatomy and Physiology. By F. JEFFREY BELL, M.A., Professor of Comparative Anatomy at King's College, London. In one 12mo. volume of 561 pages, with 229 illustrations. Limp cloth, $2.00. See *Students' Series of Manuals*, page 30.

The manual is preëminently a student's book—clear and simple in language and arrangement. It is well and abundantly illustrated, and is readable and interesting. On the whole we consider it the best work in existence in the English language to place in the hands of the medical student.—*Bristol Medico-Chirurgical Journal*, March. 1886.

Ellis' Demonstrations of Anatomy.—Eighth Edition.

Demonstrations of Anatomy. Being a Guide to the Knowledge of the Human Body by Dissection. By GEORGE VINER ELLIS, Emeritus Professor of Anatomy in University College, London. From the eighth and revised London edition. In one very handsome octavo volume of 716 pages, with 249 illustrations. Cloth, $4.25; leather, $5.25.

Roberts' Compend of Anatomy.

The Compend of Anatomy. For use in the dissecting-room and in preparing for examinations. By JOHN B. ROBERTS, A.M., M.D., Lecturer in Anatomy in the University of Pennsylvania. In one 16mo. volume of 196 pages. Limp cloth, 75 cents.

Wöhler's Outlines of Organic Chemistry. Edited by FITTIG. Translated by IRA REMSEN, M.D., Ph.D. In one 12mo. volume of 550 pages. Cloth, $3.00.

LEHMANN'S MANUAL OF CHEMICAL PHYSIOLOGY. In one octavo volume of 327 pages, with 41 illustrations. Cloth, $2.25.

CARPENTER'S HUMAN PHYSIOLOGY. Edited by HENRY POWER. In one octavo volume.

CARPENTER'S PRIZE ESSAY ON THE USE AND ABUSE OF ALCOHOLIC LIQUORS IN HEALTH AND DISEASE. With explanations of scientific words. Small 12mo. 178 pages. Cloth, 60 cents.

Foster's Physiology.—Fifth Edition.

Text-Book of Physiology. By MICHAEL FOSTER, M.D., F.R.S., Prelector in Physiology and Fellow of Trinity College, Cambridge, England. New (fourth) and enlarged American from the fifth and revised English edition, with notes and additions. In one handsome octavo volume of 1072 pages, with 282 illustrations. Cloth, $4.50; leather, $5.50.

There can be no doubt that this text-book continues to lead all others in the English language. Although the work of the American editor in former editions has been by the author largely adopted in a modified form in this revision, much was still left to be done by the editor to render the work fully adapted to the wants of our American students, so that the American edition will undoubtedly continue to supply the market on this side of the Atlantic. The work, owing to its enormous sale, is offered at an extremely low price.—*Medical and Surgical Reporter*, Jan. 9, 1892.

Dr. Foster is unquestionably the leading English-speaking physiologist of to-day. In its original editions this work was intended principally for advanced students, and it was not fully appreciated in America until revised and enlarged to meet the wants of junior students also. This process of growth under the repeated revision by author and editor has resulted in a volume containing the matter necessary to constitute a complete text and reference book for student and physician. Notwithstanding the enormous amount now presented, the popularity of the work renders possible its publication at an extremely low price, a point in which the American student has greatly the advantage of his English confrère. It is in every respect an excellent and ideal text-book. The author has succeeded in giving a thoroughly practical and entertaining account of the science. The work is admirably and graphically illustrated. —*Southern Practitioner*, Dec. 1891.

Dalton's Physiology.—Seventh Edition.

A Treatise on Human Physiology. Designed for the use of Students and Practitioners of Medicine. By JOHN C. DALTON, M.D., Professor of Physiology in the College of Physicians and Surgeons, New York, etc. Seventh edition, thoroughly revised and rewritten. In one very handsome octavo volume of 722 pages, with 252 beautiful engravings on wood. Cloth, $5.00; leather, $6.00.

From the first appearance of the book it has been a favorite, owing as well to the author's renown as an oral teacher as to the charm of simplicity with which, as a writer, he always succeeds in investing even intricate subjects. It must be gratifiying to him to observe the frequency with which his work, written for students and practitioners, is quoted by other writers on physiology. This fact attests its value, and, in great measure, its originality. It now needs no such seal of approbation, however, for the thousands who have studied it in its various editions have never been in any doubt as to its sterling worth.—*N. Y. Medical Journal*, Oct. 1882.

Professor Dalton's well-known and deservedly-appreciated work has long passed the stage at which it could be reviewed in the ordinary sense. The work is eminently one for the medical practitioner, since it treats most fully of those branches of physiology which have a direct bearing on the diagnosis and treatment of disease. The work is one which we can highly recommend to all our readers.—*Dublin Journal of Medical Sciences*, Feb. 1883.

Chapman's Human Physiology.

A Treatise on Human Physiology. By HENRY C. CHAPMAN, M.D., Professor of Institutes of Medicine in the Jefferson Medical College of Philadelphia. In one octavo volume of 925 pages, with 605 engravings. Cloth, $5.50; leather, $6.50.

Matters which have a practical bearing on the practice of medicine are lucidly expressed; technical matters are given in minute detail; elaborate directions are stated for the guidance of students in the laboratory. In every respect the work fulfils its promise, whether as a complete treatise for the student or for the physician; for the former it is so complete that he need look no farther, and the latter will find entertainment and instruction in an admirable book of reference.—*North Carolina Medical Journal*, Nov. 1887.

Physiology.

Cloth, $1.00. See *The Students' Quiz Series*, page 30.

Schofield's Elementary Physiology.—Just Ready.

Elementary Physiology for Students. By ALFRED T. SCHOFIELD, M.D., Late House Physician London Hospital. In one 12mo. volume of 380 pages, with 227 engravings and 2 colored plates containing 30 figures. Cloth, $2.00.

This volume is neither more nor less than its title implies. It is most skilfully put together and a vast deal of ground is covered. The language is clear and perspicuous, the arrangement is natural and consecutive. The illustrations are numerous and well executed. The book deserves to become popular.—*The Medical News*, July 1, 1893.

Frankland & Japp's Inorganic Chemistry.

Inorganic Chemistry. By E. FRANKLAND, D.C.L., F.R.S., Professor of Chemistry in the Normal School of Science, London, and F. R. JAPP, F.I.C., Assistant Professor of Chemistry in the Normal School of Science, London. In one handsome octavo volume of 677 pages, with 51 woodcuts and 2 plates. Cloth, $3.75; leather, $4.75.

This work should supersede other works of its class in the medical colleges. It is certainly better adapted than any work upon chemistry with which we are acquainted to impart that clear and full knowledge of the science which students of medicine should have. Physicians who feel that their chemical knowledge is behind the times would do well to study this work. The descriptions and demonstrations are made so plain that there is no difficulty in understanding them.—*Cincinnati Medical News*, January, 1886.

Clowes' Qualitative Analysis.—Third Edition.

An Elementary Treatise on Practical Chemistry and Qualitative Inorganic Analysis. Specially adapted for use in the Laboratories of Schools and Colleges and by Beginners. By FRANK CLOWES, D.Sc., London, Senior Science-Master at the High School, Newcastle-under-Lyme, etc. Third American from the fourth and revised English edition. In one 12mo. volume of 387 pages, with 55 illustrations. Cloth, $2.50.

CLASSEN'S ELEMENTARY QUANTITATIVE ANALYSIS. Translated, with notes and additions, by EDGAR F. SMITH, Ph.D., Assistant Professor of Chemistry in the Towne Scientific School, University of Pennsylvania. In one 12mo. volume of 324 pages, with 36 illustrations. Cloth, $2.00.

Simon's Chemistry.—New (4th) Edition. Just Ready.

Manual of Chemistry. A Guide to Lectures and Laboratory work for Beginners in Chemistry. A Text-book specially adapted for Students of Pharmacy and Medicine. By W. Simon, Ph.D., M.D., Professor of Chemistry and Toxicology Coll. of Phys. and Surg., Baltimore; Professor of Chemistry in the Maryland College of Pharmacy. New (fourth) edition. In one 8vo. volume of 490 pages, with 44 woodcuts and 7 colored plates illustrating 56 of the most important chemical tests. Cloth, $3.25.

A work which rapidly passes to its fourth edition needs no further proof of having achieved a success. In the present case the claims to favor are obvious. Emanating from an experienced teacher of medical and pharmaceutical students the volume is closely adapted to their needs. This is shown not only by the careful selection and clear presentation of its subject matter, but by the colored plates of reactions, which form a unique feature. Every teacher will appreciate the saving of his own time, and the advantages accruing to the student from a permanent and accurate standard of comparison for tests depending on colors, and frequently upon their changes. To the practitioner, who is likely to be confronted at any time with important pathological or toxicological questions to be answered by the test-tube, the volume will be of the utmost value. Such it has proved in the past, and the author has accordingly been enabled, through frequent and thorough revisions to keep his work constantly in touch with the progress of its science and the best methods of its presentation.—*Kansas City Medical Index*, May, 1893.

The appearance within a year of another (the fourth) edition of Professor Simon's work indicates that our favorable opinion of the work as already expressed is shared both by teachers and students. The unique feature of representing color-reactions and colored precipitates by artistically-produced illustrations is attractive and cannot fail to become part of an object lesson, so necessary for the successful study of chemistry. It can be said to rank with the best text-books on pharmaceutic and medical chemistry in this country.—*The Medical News*, July 22, 1893.

Fownes' Chemistry.—Twelfth Edition.

A Manual of Elementary Chemistry; Theoretical and Practical. By George Fownes, Ph.D. Embodying Watts' *Physical and Inorganic Chemistry*. From the twelfth English edition. In one large 12mo. volume of 1061 pages, with 168 engravings and a colored plate. Cloth, $2.75; leather, $3.25.

Fownes' *Chemistry* has been a standard text-book upon chemistry for many years. Its merits are very fully known by chemists and physicians everywhere in this country and in England. As the science has advanced by the making of new discoveries, the work has been revised so as to keep it abreast of the times. It has steadily maintained its position as a text-book with medical students. In this work are treated fully: Heat, Light and Electricity, including Magnetism. The influence exerted by these forces in chemical action upon health and disease, etc., is of the most important kind, and should be familiar to every medical practitioner. We can commend the work as one of the very best text-books upon chemistry extant.—*Cincinnati Medical News*, Oct. 1885.

Attfield's Chemistry.—Twelfth Edition.

Chemistry, General, Medical and Pharmaceutical; Including the Chemistry of the U. S. Pharmacopœia. A Manual of the General Principles of the Science, and their application to Medicine and Pharmacy. By John Attfield, M.A., Ph.D., F.I.C., F.R.S., etc., Professor of Practical Chemistry to the Pharmaceutical Society of Great Britain, etc. A new American, from the twelfth English edition, specially revised by the Author for America. In one handsome royal 12mo. volume of 782 pages, with 88 illustrations. Cloth, $2.75; leather, $3.25.

Attfield's *Chemistry* is the most popular book among students of medicine and pharmacy. This popularity rests upon real merits. Attfield's work combines in the happiest manner a clear exposition of the theory of chemistry with the practical application of this knowledge to the everyday dealings of the physician and pharmacist. His book is precisely what the title claims for it. The admirable arrangement of the text enables a reader to get a good idea of Chemistry without the aid of experiments, and again it is a good laboratory guide, and finally it contains such a mass of well-arranged information that it will always serve as a handy book of reference. He does not allow any unutilizable knowledge to slip into his book; his long years of experience have produced a work which is both scientific and practical, and which shuts out everything in the nature of a superfluity, and therein lies the secret of its success. This last edition shows the marks of the latest progress made in chemistry and chemical teaching.—*New Orleans Medical and Surgical Journal*, Nov. 1889.

Chemistry & Physics. Cloth, $1.00. See *Students' Quiz Series*, page 30.

Bloxam's Chemistry.—Fifth Edition.

Chemistry, Inorganic and Organic. By Charles L. Bloxam, Professor of Chemistry in King's College, London. From the fifth London edition, thoroughly revised and much improved. In one octavo volume of 727 pages, with 292 illustrations. Cloth, $2.00; leather, $3.00.

Comment from us on this standard work is almost superfluous. It differs widely in scope and aim from that of Attfield, and in its way is equally beyond criticism. It adopts the most direct methods in stating the principles, hypotheses and facts of the science. Its language is so terse and lucid, and its arrangement of matter so logical in sequence that the student never has occasion to complain that chemistry is a hard study. Much attention is paid to experimental illustrations of chemical principles and phenomena, and the mode of conducting these experiments. The book maintains the position it has always held as one of the best manuals of general chemistry in the English language.—*Detroit Lancet*, Feb. 1884.

Luff's Manual of Chemistry.—Just Ready.

A Manual of Chemistry. For the use of Students of Medicine. By Arthur P. Luff, M.D., B.Sc., Lecturer on Medical Jurisprudence and Toxicological Chemistry, St. Mary's Hospital Medical School, London. In one 12mo. volume of 522 pages, with 36 engravings. Cloth, $2.00. See *Students' Series of Manuals*, page 30.

Greene's Medical Chemistry.

A Manual of Medical Chemistry. For the use of Students. By William H. Greene, M.D., Demonstrator of Chemistry in the Medical Department of the University of Pennsylvania. In one 12mo. volume of 310 pages, with 74 illustrations. Cloth, $1.75.

Vaughan & Novy on Ptomaines and Leucomaines.—2d Ed.

Ptomaines, Leucomaines and Bacterial Proteids; or the Chemical Factors in the Causation of Disease. By VICTOR C. VAUGHAN, Ph.D., M.D., Professor of Physiological and Pathological Chemistry, and Associate Professor of Therapeutics and Materia Medica in the University of Michigan, and FREDERICK G. NOVY, M.D., Instructor in Hygiene and Physiological Chemistry in the University of Michigan. New (second) edition. In one 12mo. volume of 389 pages. Cloth, $2.25.

This book is one that is of the greatest importance, and the modern physician who accepts bacterial pathology cannot have a complete knowledge of this subject unless he has carefully perused it. To the toxicologist the subject is alike of great import, as well as to the hygienist and sanitarian. It contains information which is not easily obtained elsewhere, and which is of a kind that no medical thinker should be without.—*The American Journal of the Medical Sciences*, April, 1892.

This volume brings prominently to view the correct pathology of a host of diseases. Modern chemistry has furnished no more striking evidence of its value than the discovery of these ultimate causes of disease, a step which necessarily precedes any rational knowledge of cure or prevention. The literature of these subjects, already vast, was before the preparation of this work scattered and unattainable by those who had most need of its help, namely general practitioners. For the student no more important branch of chemistry exists. The early demand for a second edition of a work on so new a department of science argues well for the curriculum of those colleges which have already made it a branch of study and for the growing promptness on the part of the profession to recognize and use the most enlightened methods for the benefit of their patients.—*Southern Practitioner*, Dec. 1891.

Remsen's Theoretical Chemistry.—New (4th) Edition.

Principles of Theoretical Chemistry, with special reference to the Constitution of Chemical Compounds. By IRA REMSEN, M.D., Ph.D., Professor of Chemistry in the Johns Hopkins University, Baltimore. Fourth and thoroughly revised edition. In one royal 12mo. vol. of 325 pages. Cloth, $2.00.

The principles of theoretical chemistry need to be put very plainly to the student, for unless he gains a clear insight into the laws which govern the constitution of matter his idea of the whole subject is seldom sound, and he will probably lose the full benefit of a practical course. The book gives clear accounts of all theories and modern speculations. We have noticed this book favorably on a previous occasion, since which time four editions have been printed, and it has recently been translated into the German and Italian languages.—*London Lancet*, May 6, 1893.

The fourth edition of Professor Remsen's well-known book comes again, enlarged and revised. Each edition has enhanced its value. We may say without hesitation that it is a standard work on the theory of chemistry, not excelled and scarcely equalled by any other in any language. Its translation into German and Italian speaks for its exalted position and the esteem in which it is held by the most prominent chemists. We claim for this little work a leading place in the chemical literature of this country.—*The American Journal of the Medical Sciences*, July, 1893.

Charles' Physiological and Pathological Chemistry.

The Elements of Physiological and Pathological Chemistry. A Hand-book for Medical Students and Practitioners. Containing a general account of Nutrition, Foods and Digestion, and the Chemistry of the Tissues, Organs, Secretions and Excretions of the Body in Health and in Disease. Together with the methods for preparing or separating their chief constituents, as also for their examination in detail, and an outline syllabus of a practical course of instruction for students. By T. CRANSTOUN CHARLES, M.D., F.R.S., M.S., formerly Assistant Professor and Demonstrator of Chemistry and Chemical Physics, Queen's College, Belfast. In one handsome octavo volume of 463 pages, with 38 woodcuts and 1 colored plate. Cloth, $3.50.

Dr. Charles is fully impressed with the importance and practical reach of his subject, and he has treated it in a competent and instructive manner. We cannot recommend a better book than the present. In fact, it fills a gap in medical text-books, and that is a thing which can rarely be said nowadays. Dr. Charles has devoted much space to the elucidation of urinary mysteries. He does this with much detail, and yet in a practical and intelligible manner. In fact, the author has filled his book with many practical hints.—*Medical Record*, December 20, 1884.

Hoffmann and Powers' Medicinal Analysis.

A Manual of Chemical Analysis, as applied to the Examination of Medicinal Chemicals and their Preparations. Being a Guide for the Determination of their Identity and Quality, and for the Detection of Impurities and Adulterations. For the use of Pharmacists, Physicians, Druggists and Manufacturing Chemists, and Pharmaceutical and Medical Students. By FREDERICK HOFFMANN, A.M., Ph.D., Public Analyst to the State of New York, and FREDERICK B. POWER, Ph.D., Professor of Analytical Chemistry in the Philadelphia College of Pharmacy. Third edition, entirely rewritten and much enlarged. In one octavo volume of 621 pages, with 179 illustrations. Cloth, $4.25.

Parrish's Pharmacy.—Fifth Edition.

A Treatise on Pharmacy: Designed as a Text-book for the Student, and as a Guide for the Physician and Pharmaceutist. With many Formulæ and Prescriptions. By EDWARD PARRISH, late Professor of the Theory of Practice of Pharmacy in the Philadelphia College of Pharmacy. Fifth edition, thoroughly revised, by THOMAS S. WIEGAND, Ph.G. In one handsome octavo volume of 1093 pages, with 256 illustrations. Cloth, $5.00; leather, $6.00.

No thorough-going pharmacist will fail to possess himself of so useful a guide to practice, and no physician who properly estimates the value of an accurate knowledge of the remedial agents employed by him in daily practice, so far as their miscibility, compatibility and most effective methods of combination are concerned, can afford to leave this work out of the list of their works of reference. The country practitioner, who must always be in a measure his own pharmacist, will find it indispensable.—*Louisville Medical News*, March 29, 1884.

Ralfe's Clinical Chemistry.

Clinical Chemistry. By CHARLES H. RALFE, M.D., F.R.C.P., Assistant Physician at the London Hospital. In one pocket-size 12mo. volume of 314 pages, with 16 illustrations. Limp cloth, red edges, $1.50. See *Students' Series of Manuals*, page 30.

New (5th) Edition.—Preparing.

The National Dispensatory.

CONTAINING THE NATURAL HISTORY, CHEMISTRY, PHARMACY, ACTIONS AND USES OF MEDICINES, INCLUDING THOSE RECOGNIZED IN THE PHARMACOPŒIAS OF THE UNITED STATES, GREAT BRITAIN AND GERMANY, WITH NUMEROUS REFERENCES TO THE FRENCH CODEX.

By ALFRED STILLÉ, M.D., LL.D., *Professor Emeritus of the Theory and Practice of Medicine and of Clinical Medicine in the University of Pennsylvania.*

and JOHN M. MAISCH, Phar.D., *Professor of Materia Medica and Botany in Philadelphia College of Pharmacy, Secretary to the American Pharmaceutical Association.*

New (fifth) edition thoroughly revised, and covering the new United States Pharmacopœia. In one magnificent imperial octavo volume of about 1750 pages, with about 325 elaborate engravings. Preparing.

A few notices of the previous edition are appended.

We think it is a matter for congratulation that the profession of medicine and that of pharmacy have shown such appreciation of this great work as to call for four editions within the comparatively brief period of eight years. The matters with which it deals are of so practical a nature that neither the physician nor the pharmaceutist can do without the latest text-books on them, especially those that are so accurate and comprehensive as this one. The book is in every way creditable both to the authors and to the publishers.—*The New York Medical Journal*, May 21, 1887.

The authors and publishers have reason to feel proud of this, the most comprehensive, elaborate and accurate work of the kind ever printed in this country. It is no wonder that it has become the standard authority for both the medical and pharmaceutical professions, and that four editions have been required to supply the constant and increasing demand since its first appearance in 1879. The entire field has been gone over and the various articles revised in accordance with the latest developments regarding the attributes and therapeutical action of drugs. The remedies of recent discovery have received due attention.—*Kansas City Medical Index*, November, 1887.

Maisch's Materia Medica.—New (5th) Edition.

A Manual of Organic Materia Medica; Being a Guide to Materia Medica of the Vegetable and Animal Kingdoms. For the use of Students, Druggists, Pharmacists and Physicians. By JOHN M. MAISCH, Phar.D., Professor of Materia Medica and Botany in the Philadelphia College of Pharmacy. New (fifth) edition, thoroughly revised. In one very handsome 12mo. volume of 544 pages, with 270 engravings. Cloth, $3.00.

This is an excellent manual of organic materia medica, as are all the works that emanate from the skilful pen of such a successful teacher as John M. Maisch. The book speaks for itself in the most forcible language. In the edition before us, which is the fifth one published within the comparatively short space of eight years (and this is the best proof of the great value of the work and the just favor with which it has been received and accepted), the original contents have been thoroughly revised and much good and new matter has been incorporated. We have nothing but praise for Professor Maisch's work. It presents no weak point, even for the most severe critic. The book fully sustains the wide and well-earned reputation of its popular author. In the special line of work of which it treats it is fully up to the most recent observations and investigations. After a careful perusal of the book, we do not hesitate to recommend Maisch's *Manual of Organic Materia Medica* as one of the best, if not the best work on the subject thus far published. Its usefulness cannot well be dispensed with, and students, druggists, pharmacists, and physicians should all possess a copy of such a valuable book.—*Medical News*, December 31, 1892.

Edes' Therapeutics and Materia Medica.

A Text-Book of Therapeutics and Materia Medica. Intended for the Use of Student and Practitioners. By ROBERT T. EDES, M.D., Jackson Professor of Clinical Medicine in Harvard University. Octavo, 544 pages. Cloth, $3.50; leather, $4.50.

Dr. Edes' book represents better than any older book the practical therapeutics of the present day. The book is a thoroughly practical one. The classification of remedies has reference to their therapeutic action.—*Pharmaceutical Era*, January, 1888.

It possesses all the essentials which we expect in a book of its kind, such as conciseness, clearness, a judicious classification, and a reasonable degree of dogmatism. All the newest drugs of promise are treated of. The clinical index at the end will be found very useful. We heartily commend the book and congratulate the author on having produced so good a one.—*N. Y. Medical Journal*, Feb., 18, 1888.

Bruce's Materia Medica and Therapeutics.—Fifth Edition.

Materia Medica and Therapeutics. An Introduction to Rational Treatment. By J. MITCHELL BRUCE, M.D., F.R.C.P., Physician and Lecturer on Materia Medica and Therapeutics at Charing-Cross Hospital, London. Fifth edition. In one 12mo. volume of 591 pages. Cloth, $1.50. See *Students' Series of Manuals*, page 30.

The pharmacology and therapeutics of each drug are given with great fulness, and the indications for its rational employment in the practical treatment of disease are pointed out. The Materia Medica proper contains all that is necessary for a medical student to know at the present day. The third part of the book contains an outline of general therapeutics, each of the symptoms of the body being taken in turn and the methods of treatment illustrated. A lengthy notice of a book so well known is unnecessary.—*Medical Chronicle*, May, 1891.

Materia Medica and Therapeutics. Cloth, $1.

See *The Students' Quiz Series*, p 30.

HERMANN'S EXPERIMENTAL PHARMACOLOGY. A Handbook of Methods for Determining the Physiological Action of Drugs. Translated, with the Author's permission, and with extensive additions, by R. M. SMITH, M.D. 12mo., 199 pages, with 32 illustrations. Cloth, $1.50.

STILLÉ'S THERAPEUTICS AND MATERIA MEDICA. A Systematic Treatise on the Action and Uses of Medicinal Agents, including their Description and History. Fourth edition, revised and enlarged. In two octavo volumes, containing 1936 pages. Cloth, $10.00; leather, $12.00.

A System of Practical Therapeutics,

BY AMERICAN AND FOREIGN AUTHORS.

Edited by HOBART AMORY HARE, M.D.,

Professor of Therapeutics and Materia Medica in the Jefferson Medical College of Philadelphia.

In a series of contributions by seventy-eight eminent authorities. In three large octavo volumes of 3544 pages, with 434 illustrations. Price, per volume: Cloth, $5.00; leather, $6.00; half Russia, $7.00. *For sale by subscription only. Address the Publishers. Full prospectus free to any address on application.*

The various divisions have been elaborated by men selected in view of their special fitness. In every case there is to be found a clear and concise description of the disease under consideration, corresponding with the most recent and well-established views of the subject, embracing apposite pictorial illustrations where these are necessary. In treating of the employment of remedies and therapeutical measures, the writers have been singularly happy in giving in a definite way the exact methods employed and the results obtained, both by themselves and others, so that one might venture with confidence to use remedies with which he was previously entirely unfamiliar. The practitioner could hardly desire a book on practical therapeutics which he could consult with more interest and profit.—*The North American Practitioner*, September, 1892.

The scope of this work is beyond that of any previous one on the subject. The goal, after all, is the treatment of disease, and a work which contributes to its successful management is to be looked upon as of vast use to humanity. It cannot be denied that therapeutic resources, whether the treatment be confined to the mere administration of drugs, or allowed its more extended application to the management of disease, have so greatly multiplied within the last few years as to render previous treatises of little value. Herein will be found the great value of Hare's encyclopedic work, which groups together within a single series of volumes the most modern methods known in the management of disease, and especially deals with important subjects comprehensively, which could not be done in a more limited treatise. We cannot commend Hare's *System of Practical Therapeutics* too highly; it stands out first and foremost as a work to be consulted by authors, teachers and physicians throughout the world.—*Buffalo Medical and Surgical Journal*, August, 1892.

Hare's Text-Book of Practical Therapeutics.—New (3d) Ed.

A Text-Book of Practical Therapeutics; With Especial Reference to the Application of Remedial Measures to Disease and their Employment upon a Rational Basis. By HOBART AMORY HARE, M.D., Professor of Therapeutics and Materia Medica in the Jefferson Medical College of Philadelphia; Secretary of Convention for Revision of United States Pharmacopœia of 1890. With special chapters by DRS. G. E. DE SCHWEINITZ, EDWARD MARTIN, J. HOWARD REEVES, and BARTON C. HIRST. New (third) and revised edition. In one octavo volume of 689 pages. Cloth, $3.75; leather, $4.75. *Just Ready.*

Hare's works on Therapeutics are remarkably well known. As its name would indicate, the book before us is a Text-Book on Practical Therapeutics. Its pretensions are not voluminous nor exhaustive, but they are honest, valuable and practical. The student of other works has often, indeed, very often, longed for less of the abstract materia medica and more of the practical application of drugs to disease. In this work that want is filled. The drugs are arranged alphabetically, which enables one to find any name quickly, and, with the excellent index at the end of the volume, naught is left to be desired in the way of quick reference. Each drug, including all the newer remedies which have been proven to possess true merit, is considered in a rational and scientific manner. This work also presents us with nearly 250 pages of practical therapeutics, as applied to the individual diseases. The subjects are arranged alphabetically. It is in the chapter on *Diseases* that the student finds the rationale of therapeutics. This section is properly the complement of the former, in which each drug was presented with notes as to its usefulness in numerous diseases, while in the latter each disease is considered very fully from a therapeutical stand-point, giving the applications and special indications of the different remedies in the different phases of that particular affection. It is not a wonder that this work was quickly adopted by many colleges as a text-book and so liberally purchased as to necessitate the publication of a third edition within two years; it is not surprising, but instead, just what we should reasonably expect. The student will find its pages filled with the choicest of therapeutical lore, systematically arranged and clearly and forcibly presented; the practitioner will appreciate its rationality and its general utility as an elbow consultant. It contains, without question, the best exposition of modern therapeutics of any text-book with which we are acquainted.—*The Chicago Clinical Review*, March, 1893.

Brunton's Therapeutics and Materia Medica.—Third Ed.

A Text-Book of Pharmacology, Therapeutics and Materia Medica. By T. LAUDER BRUNTON, M.D., D.Sc., F.R.S., F.R.C.P., Lecturer on Materia Medica and Therapeutics at St. Bartholomew's Hospital, London, etc. Including the Pharmacy, the Physiological Action and the Therapeutical Uses of Drugs. Adapted to the United States Pharmacopœia by FRANCIS H. WILLIAMS, M.D., of Harvard University Medical School. Third edition. Octavo, 1305 pages, with 230 illustrations. Leather, $6.50.

Farquharson's Therapeutics and Materia Medica.—4th Ed.

A Guide to Therapeutics and Materia Medica. By ROBERT FARQUHARSON, M.D., F.R.C.P., LL.D., Lecturer on Materia Medica at St. Mary's Hospital Medical School, London. Fourth American, from the fourth English edition. Enlarged and adapted to the United States Pharmacopœia, by FRANK WOODBURY, M.D., Professor of Materia Medica and Therapeutics and Clinical Medicine in the Medico-Chirurgical College of Philadelphia. In one handsome 12mo. volume of 581 pages. Cloth, $2.50.

It may correctly be regarded as the most modern work of its kind. It is concise, yet complete. Containing an account of all remedies that have a place in the British and United States Pharmacopœias, as well as considering all non-official but important new drugs, it becomes in fact a miniature dispensatory.—*Pacific Medical Journal*, June, 1889.

Farquharson's *Therapeutics and Materia Medica* has struck a happy medium between excessive brevity on the one hand and tedious prolixity on the other. It deals with the entire list of drugs embraced in the *British Pharmacopœia* in such a way as to give in a satisfactory form the established indications of each, excluding all irrelevant matter. An especially attractive feature is an arrangement by which the physiological and therapeutical action of various remedies are shown in parallel columns. This aids greatly in fixing attention and facilitates study. The American editor has enlarged the work so as to include all the remedies and preparations in the *United States Pharmacopœia*. Altogether the book is a most valuable addition to the list of treatises on this most important subject.—*The American Practitioner and News*, November 9, 1889.

Flint's Practice of Medicine.—Sixth Edition.

A Treatise on the Principles and Practice of Medicine. Designed for the use of Students and Practitioners of Medicine. By AUSTIN FLINT, M.D., LL.D., Professor of the Principles and Practice of Medicine, and of Clinical Medicine in Bellevue Hospital Medical College, N. Y. Sixth edition, thoroughly revised and rewritten by the Author, assisted by WILLIAM H. WELCH, M.D., Professor of Pathology, Johns Hopkins University, Baltimore, and AUSTIN FLINT, JR., M.D., LL.D., Professor of Physiology, Bellevue Hospital Medical College, New York. In one very handsome octavo volume of 1160 pages, with illustrations. Cloth, $5.50; leather, $6.50.

No text-book on the principles and practice of medicine has ever met in this country with such general approval by medical students and practitioners as the work of Professor Flint. In all the medical colleges of the United States it is the favorite work upon Practice; and, as we have stated before in alluding to it, there is no other medical work that can be so generally found in the libraries of physicians. In every State and Territory of this vast country the book that will be most likely to be found in the office of a medical man, whether in city, town, village, or at some cross-roads, is Flint's *Practice*. We make this statement to a considerable extent from personal observation, and it is the testimony also of others. The work may undoubtedly be regarded as fairly representing the present state of the science of medicine, and as reflecting the views of those who exemplify in their practice the present stage of progress of medical art.—*Cincinnati Medical News*, October, 1886.

Fothergill's Handbook of Treatment.—Third Edition.

The Practitioner's Handbook of Treatment; Or, The Principles of Therapeutics. By J. MILNER FOTHERGILL, M.D., Edinburgh, M.R.C.P., London, Physician to the City of London Hospital for Diseases of the Chest. Third edition. In one 8vo. volume of 661 pages. Cloth, $3.75; leather, $4.75.

To have a description of the normal physiological processes of an organ and of the methods of treatment of its morbid conditions brought together in a single chapter, and the relations between the two clearly stated, cannot fail to prove a great convenience to many thoughtful but busy physicians. The practical value of the volume is greatly increased by the introduction of many prescriptions. That the profession appreciates that the author has undertaken an important work and has accomplished it is shown by the demand for this third edition.—*New York Medical Journal*, June 11, 1887.

The Year-Book of Treatment for 1893.

A Comprehensive and Critical Review for Practitioners of Medicine and Surgery. In one 12mo. vol. of 501 pages. Cloth, $1.50. *** *For special commutations with periodicals see pages 1 and 2.*

The Year-Book of Treatment for 1893 easily holds its advanced place among the many annuals and abstracts forming so marked a feature of modern medical literature. Its pages give a critical and well-arranged review of the best that the year has brought forth in all departments of therapeutics. Among so much that is excellent one can scarcely choose. Commendable features are the Summary of Therapeutics and the Selected List of New Books. There is as usual a good index.—*The Medical News*, May 20, 1893.

The Year-Books of Treatment for 1891 and 1892.

12mos., 485 pages. Cloth, $1.50 each.

The Year-Books of Treatment for 1886 and 1887.

Similar to above. 12mo., 320-341 pages. Cloth, $1.25 each.

Hartshorne's Essentials of Practice.—Fifth Edition.

Essentials of the Principles and Practice of Medicine. A Hand-book for Students and Practitioners. By HENRY HARTSHORNE, M.D., LL.D., lately Professor of Hygiene in the University of Pennsylvania. Fifth edition, thoroughly revised and rewritten. In one 12mo. volume of 669 pages, with 144 illustrations. Cloth, $2.75; half leather, $3.00.

Within the compass of 600 pages it treats of the history of medicine, general pathology, general symptomatology, and physical diagnosis (including laryngoscope, ophthalmoscope, etc.), general therapeutics, nosology, and special pathology and practice. There is a wonderful amount of information contained in this work, and it is one of the best of its kind that we have seen.—*Glasgow Medical Journal*, November, 1882.

Practice of Medicine, Including Nervous Diseases.

Cloth, $1.00. See *Students Quiz Series*, page 30.

BRISTOWE'S PRACTICE OF MEDICINE. Seventh Edition. In one large octavo volume of 1325 pages. Cloth, $6.50; leather, $7.50.

REYNOLDS' SYSTEM OF MEDICINE. By J. RUSSELL REYNOLDS, M.D., Professor of the Principles and Practice of Medicine in University College, London. With notes and additions by HENRY HARTSHORNE, A.M., M.D., late Professor of Hygiene in the University of Pennsylvania. Three large octavo volumes, containing 3056 double-columned pages, with 317 illustrations. Price per volume, cloth, $5.00; sheep, $6.00; half Russia, raised bands, $6.50. Per set, cloth, $15.00; leather, $18.00; half Russia, $19.50. *Sold only by subscription.*

WATSON'S LECTURES ON THE PRINCIPLES AND PRACTICE OF PHYSIC. From the fifth English edition. Edited with additions, and 190 illustrations, by HENRY HARTSHORNE, A.M., M.D., late Professor of Hygiene in the University of Pennsylvania. In two large octavo volumes of 1840 pages. Cloth, $9.00; leather, $11.00.

FLINT ON PHTHISIS: ITS MORBID ANATOMY, ETIOLOGY, SYMPTOMATIC EVENTS AND COMPLICATIONS, FATALITY AND PROGNOSIS, TREATMENT AND PHYSICAL DIAGNOSIS; in a series of Clinical Studies. In one octavo volume of 442 pages. Cloth, $3.50.

FLINT'S PRACTICAL TREATISE ON THE DIAGNOSIS, PATHOLOGY AND TREATMENT OF DISEASES OF THE HEART. Second revised and enlarged edition. In one octavo volume of 550 pages, with a plate. Cloth, $4.

FLINT'S ESSAYS ON CONSERVATIVE MEDICINE AND KINDRED TOPICS. In one very handsome royal 12mo. volume of 210 pages. Cloth, $1.38.

STURGES' INTRODUCTION TO THE STUDY OF CLINICAL MEDICINE. Being a Guide to the Investigation of Disease. In one handsome 12mo. volume of 127 pages. Cloth, $1.25.

WALSHE ON THE DISEASES OF THE HEART AND GREAT VESSELS. Third American edition. In one octavo volume of 416 pages. Cloth, $3.00.

HOLLAND'S MEDICAL NOTES AND REFLECTIONS. One octavo volume of 493 pages. Cloth, $3.50.

Lyman's Practice of Medicine.

The Principles and Practice of Medicine. For the Use of Medical Students and Practitioners. By HENRY M. LYMAN, M.D., Professor of the Principles and Practice of Medicine, Rush Medical College, Chicago. In one octavo volume of 925 pages, with 170 illustrations. Cloth, $4.75; leather, $5.75.

This is an excellent treatise on the practice of medicine, written by one who is not only familiar with his subject, but who has also learned, through practical experience in teaching, what are the needs of the student, and how to present the facts to his mind in the most readily assimilable form. Each subject is taken up in order, treated clearly but briefly, and dismissed when all has been said that need be said in order to give the reader a clean-cut picture of the disease under discussion. The reader is not confused by having presented to him a variety of different methods of treatment, among which he is left to choose the one most easy of execution, but the author describes the one which is in his judgment the best. This is as it should be. What the student should be taught is the one most approved method of treatment. We have spoken of the work as one for the student, and this because the author occupies so prominent a position as a teacher, but we would not be understood that it is adapted only for students. He will find here each subject presented in its latest aspect, and only such theories mentioned as have been generally accepted by the highest authorities. The practical and busy man who wants to ascertain in a short time all the necessary facts concerning the pathology or treatment of any disease will find here a safe and convenient guide.—*Medical Record*, October 22, 1892.

Flint on Auscultation and Percussion.—Fifth Edition.

A Manual of Auscultation and Percussion; Of the Physical Diagnosis of Diseases of the Lungs and Heart, and of Thoracic Aneurism. By AUSTIN FLINT, M.D., LL.D., Professor of the Principles and Practice of Medicine in Bellevue Hospital Medical College, New York. Fifth edition. Edited by JAMES C. WILSON, M.D., Lecturer on Physical Diagnosis in the Jefferson Medical College, Philadelphia. In one handsome royal 12mo. volume of 274 pages, with 12 illustrations. Cloth, $1.75.

This little book through its various editions has probably done more to advance the science of physical exploration of the chest than any other dissertation upon the subject, and now in its fifth edition it is as nearly perfect as can be. The rapidity with which previous editions were sold shows how the profession appreciated the thoroughness of Professor Flint's investigations. For students it is excellent. Its value is shown both in the arrangement of the material and in the clear, concise style of expression. For the practitioner it is a ready manual for reference.—*North American Practitioner*, January, 1891.

Musser's Medical Diagnosis—In Press.

A Practical Treatise on Medical Diagnosis. For the Use of Students and Practitioners. By JOHN H. MUSSER, M.D., Assistant Professor of Clinical Medicine, University of Pennsylvania, Philadelphia. In one octavo volume of about 650 pages, richly illustrated.

Broadbent on the Pulse.

The Pulse. By W. H. BROADBENT, M.D., F.R.C.P., Physician to and Lecturer on Medicine at St. Mary's Hospital, London. In one 12mo. volume of 312 pages. Cloth, $1.75. See *Series of Clinical Manuals*, page 30.

Pepper's System of Practical Medicine.

BY AMERICAN AUTHORS.

Edited by WILLIAM PEPPER, M.D., LL.D.,

Provost and Professor of the Theory and Practice of Medicine and of Clinical Medicine in the University of Pennsylvania.

The complete work, in five volumes, containing 5573 pages, with 198 illustrations, is now ready. Price per volume, cloth, $5.00; leather, $6.00; half Russia, $7.00. *For sale by subscription only.*

The feeling of proud satisfaction with which the American profession sees this, its representative system of practical medicine, issued to the medical world, is fully justified by the character of the work. The entire caste of the system is in keeping with the best thoughts of the leaders and followers of our home school of medicine, and the combination of the scientific study of disease and the practical application of exact and experimental knowledge to the treatment of human maladies, makes every one of us share in the pride that has welcomed Dr. Pepper's labors. Sheared of the prolixity that wearies the readers of the German school, the articles glean these same fields for all that is valuable. It is the outcome of American brains, and is marked throughout by much of the sturdy independence of thought and originality that is a national characteristic. Yet nowhere is there lack of study of the most advanced views of the day.—*North Carolina Medical Journal*, September, 1886.

Habershon on the Abdomen.

On the Diseases of the Abdomen; Comprising those of the Stomach, and other parts of the Alimentary Canal, Œsophagus, Cæcum, Intestines and Peritoneum. By S. O. HABERSHON, M.D., Senior Physician to and late Lecturer on Principles and Practice of Medicine at Guy's Hospital, London. Second American from third enlarged and revised English edition. In one handsome octavo volume of 554 pages, with illustrations. Cloth, $3.50.

FULLER ON DISEASES OF THE LUNGS AND AIR-PASSAGES. Their Pathology, Physical Diagnosis, Symptoms and Treatment. From the second and revised English edition. In one octavo volume of 475 pages. Cloth, $3.50.

SLADE ON DIPHTHERIA; its Nature and Treatment, with an account of the History of its Prevalence in various Countries. Second and revised edition. In one 12mo. vol., 158 pp. Cloth, $1.25

SMITH ON CONSUMPTION; its Early and Remediable Stages. 1 vol. 8vo., 253 pp. Cloth, $2.25.

LA ROCHE ON PNEUMONIA. 1 vol. 8vo., 490 pages. Cloth, $3.00.

WILLIAMS ON PULMONARY CONSUMPTION; its Nature, Varieties, and Treatment. With an analysis of one thousand cases to exemplify its duration. In one 8vo. vol. of 303 pp. Cloth, $2.50.

Whitla's Dictionary of Treatment.

A Dictionary of Treatment; or Therapeutic Index, including Medical and Surgical Therapeutics. By WILLIAM WHITLA, M.D., Professor of Materia Medica and Therapeutics in the Queen's College, Belfast. Revised and adapted to the United States Pharmacopœia. In one square, octavo volume of 917 pages. Cloth, $4.00.

The several diseased conditions are arranged in alphabetical order, and the methods, medical, surgical, dietetic and climatic, by which they may be met, are considered. On every page we find clear and detailed directions for treatment. The book abounds with useful, practical hints and suggestions. The most experienced members of the profession may usefully consult its pages for the purpose of learning what is really trustworthy in the later therapeutic developments. The *Dictionary*, is, in short, the recorded experience of a practical scientific therapeutist, who has carefully studied diseases and disorders at the bed-side and in the consulting-room, and has earnestly addressed himself to the cure and relief of his patients. *The Glasgow Medical Journal*, April, 1892.

Bartholow on Cholera.—Just Ready.

Cholera: Its Causes, Symptoms, Pathology and Treatment. By ROBERTS BARTHOLOW, M.D., LL.D., Emeritus Professor of Materia Medica, General Therapeutics and Hygiene in the Jefferson Medical College of Philadelphia. In one 12mo. volume of 127 pages, with 9 illustrations. Cloth, $1.25.

Dr. Bartholow has produced a little book on cholera at once authoritative and complete in its detail. He has shown how all that is absolutely necessary for the practitioner to know about cholera may be compressed into a few pages. Nearly one half the book is given to treatment.—*Journal of the American Medical Association*, July 15, 1893.

We have here a practical book, in small compass, containing the very latest ideas concerning the treatment of cholera, together with the personal experience of the author who has passed through two epidemics of this disease. Historical accounts and long discussions on disputed etiological points are omitted and only that which is of most use to the general practitioner is included.—*The National Medical Review*, August, 1893.

BY THE SAME AUTHOR.

Medical Electricity. A Practical Treatise on the Applications of Electricity to Medicine and Surgery. Third edition. In one octavo volume of 308 pages, with 110 illustrations. Cloth, $2.50.

Professor Bartholow's practical treatise on the application of electricity to medicine and surgery, having reached a third edition, scarcely requires detailed notice. Originally intended for students and practitioners, it starts by assuming an "entire unacquaintance with the elements of the subject." The work is fitted by its extreme lucidity for the use of busy practitioners who require a guide in practical electro-therapeutics. — *London Lancet*, January 14, 1888.

Yeo's Manual of Medical Treatment.—Just Ready.

A Manual of Medical Treatment or Clinical Therapeutics. By I. BURNEY YEO, M.D., F.R.C.P., Professor of Therapeutics in King's College London. In two 12mo. volumes containing 1275 pages, with illustrations. Complete work, cloth, $5.50.

In this work disease is studied from the standpoint of treatment, the rational indications for therapeusis being reached through an explanation of the causation and phenomena of disease and of the properties and mode of action of the agencies available for alleviation or cure. The work is rich in selections of formulæ used by well-known physicians.

BY THE SAME AUTHOR.

Food in Health and Disease. In one 12mo. volume of 590 pages. Cloth, $2.00. See *Series of Clinical Manuals*, page 30.

Dr. Yeo supplies in a compact form nearly all that the practitioner requires to know on the subject of diet. The work is divided into two parts—food in health and food in disease. Dr. Yeo has gathered together from all quarters an immense amount of useful information within a comparatively small compass, and he has arranged and digested his materials with skill for the use of the practitioner. We have seldom seen a book which more thoroughly realizes the object for which it was written than this little work of Dr. Yeo.—*British Medical Journal*, February 8, 1890.

Richardson's Preventive Medicine.

Preventive Medicine. By B. W. RICHARDSON, M.D., LL.D., F.R.S., Fellow of the Royal College of Physicians, London. In one 8vo. volume of 729 pages. Cloth, $4.00; leather, $5.00.

SCHREIBER ON MASSAGE. A Manual of Treatment by Massage and Methodical Muscle Exercise. By JOSEPH SCHREIBER, M.D. Translated by WALTER MENDELSON, M.D., of New York. In one handsome octavo volume of 274 pages, with 117 fine engravings.

STILLÉ ON CHOLERA: Its Origin, History, Causation, Symptoms, Lesions, Prevention and Treatment. In one handsome 12mo. vol. of 163 pages, with a chart. Cloth, $1.25.

PAVY'S TREATISE ON THE FUNCTION OF DIGESTION; its Disorders and their Treatment. From the second London edition. In one octavo volume of 238 pages. Cloth, $2.00.

BARLOW'S MANUAL OF THE PRACTICE OF MEDICINE. With additions by D. F. CONDIE, M.D. In one octavo volume of 603 pages. Cloth, $2.50.

CHAMBERS' MANUAL OF DIET AND REGIMEN IN HEALTH AND SICKNESS. In one handsome octavo volume of 302 pages. Cloth, $2.75.

A TREATISE ON FEVER. By ROBERT D. LYONS, K.C.C. In one octavo volume of 354 pages. Cloth, $2.25.

LECTURES ON THE STUDY OF FEVER. By A. HUDSON, M.D., M.R.I.A. In one octavo volume of 308 pages. Cloth, $2.50.

LA ROCHE ON YELLOW FEVER, in its Historical, Pathological, Etiological and Therapeutical Relations. Two octavo volumes, 1468 pages. Cloth, $7.00.

TANNER'S MANUAL OF CLINICAL MEDICINE AND PHYSICAL DIAGNOSIS. Third American, from the second London edition. Revised and enlarged by TILBURY FOX, M.D. In one 12mo. volume of 362 pages, with illustrations. Cloth, $1.50.

DAVIS' CLINICAL LECTURES ON VARIOUS IMPORTANT DISEASES. By N. S. DAVIS, M.D. Edited by FRANK H. DAVIS, M.D. Second edition. 12mo., 287 pages. Cloth, $1.75.

TODD'S CLINICAL LECTURES ON CERTAIN ACUTE DISEASES. In one 8vo. volume of 320 pages. Cloth, $2.50.

FLINT'S PRACTICAL TREATISE ON THE PHYSICAL EXPLORATION OF THE CHEST AND THE DIAGNOSIS OF DISEASES AFFECTING THE RESPIRATORY ORGANS. Second and revised edition. In one handsome octavo volume of 591 pages. Cloth, $4.50.

Gray on Nervous and Mental Diseases.—Just Ready.

A Practical Treatise on Nervous and Mental Diseases. By LANDON CARTER GRAY, M.D., Professor of Diseases of the Mind and Nervous System in the New York Polyclinic. In one very handsome octavo volume of 681 pages, with 168 illustrations. Cloth, $4.50; leather, $5.50.

It must have been felt by all that the time had come for a new and representative book, and that the author would be both happy and fortunate who would meet this want in the reading and teaching ranks of the profession. This want we can now say has been met. It is evident that the author has drawn, and drawn profitably, from many sources for illustration and enrichment of his text. This gives the book a special value for literary reference. Another merit consists in the originality and distinctness of many of the photographic illustrations. Dr. Gray always speaks with the dogmatism that marks the original observer and that carries conviction. This tone in the book, which is always well modulated and thoroughly under control, will add attractiveness and weight to the author's utterances. Another general characteristic that strikes us most favorably is the prominence given to the symptoms and the treatment of these diseases. Hence Dr. Gray's book is a very practical one. It does not devote undue space to the microscopic appearances of diseases, nerves and tissues which the general practitioner and student sees hardly once in a lifetime. Pathology and morbid anatomy, so essential to the expert, are not neglected; but therapeutics, the goal of the practitioner, is completely and exhaustively discussed. Dr. Gray's book closes with an important section on mental diseases. This is a unique feature for a text-book on nervous diseases, and one, we are sure, that will commend it to many readers. After all, the two classes of subjects are closely allied, and a concise treatment of both within the same covers is, for many, a desideratum.—*American Journal of the Medical Sciences*, March, 1893.

Ross on Diseases of the Nervous System.

A Hand-book on Diseases of the Nervous System. By JAMES ROSS, M.D., F.R.C.P., LL.D., Senior Assistant Physician to the Manchester Royal Infirmary. In one octavo volume of 725 pages, with 184 illustrations. Cloth, $4.50; leather, $5.50.

This admirable work is intended for students of medicine and for such medical men as have no time for lengthy treatises. In the present instance the duty of arranging the vast store of material at the disposal of the author, and of abridging the description of the different aspects of nervous diseases, has been performed with singular skill, and the result is a concise and philosophical guide to the department of medicine of which it treats. Dr. Ross holds such a high scientific position that any writings which bear his name are naturally expected to have the impress of a powerful intellect. In every part this handbook merits the highest praise, and will no doubt be found of the greatest value to the student as well as to the practitioner.—*Edinburgh Medical Journal*, January, 1887.

Hamilton on Nervous Diseases.—Second Edition.

Nervous Diseases; Their Description and Treatment. By ALLAN MCLANE HAMILTON, M.D., Attending Physician at the Hospital for Epileptics and Paralytics, Blackwell's Island, N. Y. Second edition, thoroughly revised and rewritten. In one octavo volume of 598 pages, with 72 illustrations. Cloth, $4.00.

Savage on Insanity and Allied Neuroses.

Insanity and Allied Neuroses, Practical and Clinical. By GEORGE H. SAVAGE, M.D., Lecturer on Mental Diseases at Guy's Hospital, London. In one 12mo. volume of 551 pages, with 18 illustrations. Cloth, $2.00. See *Series of Clinical Manuals*, page 30.

Tuke on the Influence of the Mind upon the Body.

Illustrations of the Influence of the Mind Upon the Body in Health and Disease. Designed to elucidate the Action of the Imagination. By DANIEL HACK TUKE, M.D., Joint Author of the Manual of Psychological Medicine, etc. New edition, thoroughly revised and rewritten. In one 8vo. volume of 467 pages, with 2 colored plates. Cloth, $3.00.

Guided by an enlightened deduction, the author has reclaimed for science a most interesting domain in psychology, previously abandoned to charlatans and empirics. This book, well conceived and well written, must commend itself to every thoughtful understanding.—*New York Medical Journal*, September 6, 1884.

Clouston on Mental Diseases.

Clinical Lectures on Mental Diseases. By THOMAS S. CLOUSTON, M.D., Lecturer on Mental Diseases in the University of Edinburgh. With an Appendix, containing an abstract of the Statutes of the United States and of the Several States and Territories relating to the Custody of the Insane. By CHARLES F. FOLSOM, M.D., Assistant Professor of Mental Diseases, Medical Department of Harvard University. In one octavo volume of 541 pages, with 8 lithographic plates, 4 of which are colored. Cloth, $4.00.

☞Dr. Folsom's *Abstract* also separate, in one 8vo. volume of 108 pages. Cloth, $1.50

The descriptions of the diseases and cases are simple and practical, but true; and one sees as he reads that they are given by one perfectly familiar from daily observation with the cases and diseases he is speaking of. One feature of the book which commends it highly, and which is not to be found in any other work on mental diseases, are the hints and descriptions given as to the practical management and care of the cases. We can heartily recommend it to the student and busy general practitioner. Dr. Folsom's work greatly increases the value of Dr. Clouston's book for the American practitioner.—*Archives of Medicine*, June, 1884.

Playfair on Nerve Prostration and Hysteria.

The Systematic Treatment of Nerve Prostration and Hysteria. By W. S. PLAYFAIR, M.D., F.R.C.P. In one 12mo. volume of 97 pages. Cloth, $1.00.

BLANDFORD ON INSANITY AND ITS TREATMENT. Lectures on the Treatment, Medical and Legal, of Insane Patients. In one very handsome octave volume.

JONES' CLINICAL OBSERVATIONS ON FUNCTIONAL NERVOUS DISORDERS. Second American edition. In one handsome octavo volume of 340 pages. Cloth, $3.25.

Gibbes' Practical Pathology and Morbid Histology.

Practical Pathology and Morbid Histology. By HENEAGE GIBBES, M.D., Professor of Pathology in the University of Michigan, Medical Department. In one very handsome 8vo. volume of 314 pages, with 60 illustrations, mostly photographic. Cloth, $2.75.

This is, in part, an expansion of the little work published by the author some years ago, and his acknowledged skill as a practical microscopist will give weight to his instructions. Indeed, in fullness of directions as to the modes of investigating morbid tissues, the book leaves little to be desired. The work is throughout profusely illustrated with reproductions of micro-photographs. We may say that the practical histologist will gain much useful information from the book.—*The London Lancet*, January 23, 1892.

Abbott's Bacteriology.

The Principles of Bacteriology: a Practical Manual for Students and Physicians. By A. C. ABBOTT, M.D., First Assistant, Laboratory of Hygiene, University of Pennsylvania, Philadelphia. In one 12mo. volume of 259 pages, with 32 illustrations. Cloth, $2.00.

To a person desiring to learn the technique of bacteriological work, we cannot recommend any work which will be more suitable than the one before us. Dr. Abbott has shown great judgment in the selection and arrangement of his material. The student who follows it closely will be in a condition to carry forward the work for himself. Medical practitioners generally could read the work with profit, especially the chapters on sterilization and disinfection, and those on tuberculosis and diphtheria in the second part.—*The Canadian Practitioner*, Nov. 1, 1892.

Senn's Surgical Bacteriology.—Second Edition.

Surgical Bacteriology. By NICHOLAS SENN, M.D., Ph.D., Professor of Surgery in Rush Medical College, Chicago. New (second) edition. In one handsome octavo volume of 268 pages, with 13 plates, of which 10 are colored, and 9 engravings. Cloth, $2.00.

The book is really a systematic collection in the most concise form of such results as are published in current medical literature by the ablest workers in this field of surgical progress; and to these are added the author's own views and the results of his clinical experience and original investigations. The book is valuable to the student, but its chief value lies in the fact that such a compilation makes it possible for the busy practitioner, whose time for reading is limited and whose sources of information are often few, to become conversant with the most modern and advanced ideas in surgical pathology, which have "laid the foundation for the wonderful achievements of modern surgery."—*Annals of Surgery*, March, 1892.

Green's Pathology and Morbid Anatomy.—Seventh Edition.

Pathology and Morbid Anatomy. By T. HENRY GREEN, M.D., Lecturer on Pathology and Morbid Anatomy at Charing-Cross Hospital Medical School, London. Sixth American from the seventh revised English edition. Octavo volume of 539 pages, with 167 engravings. Cloth, $2.75.

There is scarcely an intelligent physician anywhere who has not the work in his library, for it is almost an essential. In fact it is better adapted to the wants of general practitioners than any work of the kind with which we are acquainted. The works of German authors upon pathology, which have been translated into English, are too abstruse for the physician. Dr. Green's work precisely meets his wishes. The fact that it is so generally employed as a text-book by medical students is evidence that we have not spoken too much in its favor.—*Cincinnati Medical News*, October, 1889.

Payne's General Pathology.

A Manual of General Pathology. Designed as an Introduction to the Practice of Medicine. By JOSEPH F. PAYNE, M.D., F.R.C.P., Lecturer on Pathological Anatomy, St. Thomas' Hospital, London. Octavo volume of 524 pages, with 152 illustrations and a colored plate. Cloth, $3.50.

Knowing, as a teacher and examiner, the exact needs of medical students, the author has in the work before us prepared for their especial use what we do not hesitate to say is the best introduction to general pathology that we have yet examined. A departure which our author has taken is the greater attention paid to the causation of disease, and more especially to the etiological factors in those diseases now with reasonable certainty ascribed to pathogenetic microbes. In this department he has been very full and explicit, not only in a descriptive manner, but in the technique of investigation. The Appendix, giving methods of research, is alone worth the price of the book, several times over, to every student of pathology.—*St. Louis Medical and Surgical Journal*, January, 1889.

Coats' Treatise on Pathology.

A Treatise on Pathology. By JOSEPH COATS, M.D., F.F.P.S., Pathologist to the Glasgow Western Infirmary. In one octavo volume of 829 pages, with 339 illustrations. Cloth, $5.50; leather, $6.50.

We are very much pleased with this book, which, for general practitioners and students, comes nearer to our idea of perfection than any we know on this subject, within the same dimensions. The style is exceedingly good, being plain, concise and practical without being like a dictionary. We have pleasure in recommending it to students, as we think it well adapted for their use.—*Canadian Practitioner*, December, 1883.

Klein's Histology.—Fourth Edition.

Elements of Histology. By E. KLEIN, M.D., F.R.S., Joint Lecturer on General Anatomy and Physiology in the Medical School of St. Bartholomew's Hospital, London. Fourth edition. In one 12mo. volume of 376 pages, with 194 illus. Limp cloth, $1.75. See *Students' Series of Manuals*, page 30.

The large number of editions through which Dr. Klein's little handbook of histology has run since its first appearance in 1883 is ample evidence that it is appreciated by the medical student and that it supplies a definite want. The clear and concise manner in which it is written, the absence of debatable matter, of conflicting views, and the convenient size of the book and its moderate price, will account for its undoubted success.—*Medical Chronicle*, Feb., 1890.

Histology, Pathology and Bacteriology. Cloth. $1. See *Students' Quiz Series*, p. 30.

Roberts' Modern Surgery.

The Principles and Practice of Modern Surgery. For the use of Students and Practitioners of Medicine and Surgery. By JOHN B. ROBERTS, M.D., Professor of Anatomy and Surgery in the Philadelphia Polyclinic. Professor of the Principles and Practice of Surgery in the Woman's Medical College of Pennsylvania. Lecturer on Anatomy in the University of Pennsylvania. In one very handsome octavo volume of 780 pages, with 501 illustrations. Cloth, $4.50; leather, $5.50.

This work is a very comprehensive manual upon general surgery, and will doubtless meet with a favorable reception by the profession. It has a thoroughly practical character, the subjects are treated with rare judgment, its conclusions are in accord with those of the leading practitioners of the art, and its literature is fully up to all the advanced doctrines and methods of practice of the present day. Its general arrangement follows this rule, and the author, in his desire to be concise and practical, is at times almost dogmatic, but this is entirely excusable considering the admirable manner in which he has thus increased the usefulness of his work.—*Medical Record*, January 17, 1891.

Ashhurst's Surgery.—Fifth Edition.

The Principles and Practice of Surgery. By JOHN ASHHURST, JR., M.D., Barton Professor of Surgery and Clinical Surgery in the University of Pennsylvania, Surgeon to the Pennsylvania Hospital, Philadelphia. Fifth edition, enlarged and thoroughly revised. In one octavo volume of 1144 pages, with 642 illustrations. Cloth, $6.00; leather, $7.00.

A complete and most excellent work on surgery. It is only necessary to examine it to see at once its excellence and real merit either as text-book for the student or a guide for the general practitioner. It fully considers in detail every surgical injury and disease to which the body is liable, and every advance in surgery worth noting is to be found in its proper place. It is unquestionably the best and most complete single volume on surgery, in the English language, and cannot but receive that continued appreciation which its merits justly demand.—*Southern Practitioner*, February, 1890.

Druitt's Modern Surgery.—Twelfth Edition.

Manual of Modern Surgery. By ROBERT DRUITT, M.R.C.S. Twelfth edition, thoroughly revised by STANLEY BOYD, M.B., B.S., F.R.C.S. In one 8vo. volume of 965 pages, with 373 illustrations. Cloth, $4.00; leather, $5.00.

Druitt's *Surgery* has been an exceedingly popular work in the profession. It is stated that 50,000 copies have been sold in England, while in the United States, ever since its first issue, it has been used as a text-book to a very large extent. During the late war in this country it was so highly appreciated that a copy was issued by the Government to each surgeon. The present edition, while it has the same features peculiar to the work at first, embodies all recent discoveries in surgery, and is fully up to the times. —*Cincinnati Medical News*, September, 1887.

Gross' System of Surgery.—Sixth Edition.

A System of Surgery. By SAMUEL D. GROSS, M.D., LL.D., Emeritus Professor of Surgery in the Jefferson Medical College of Philadelphia. Sixth edition. In two large imperial octavo volumes containing 2382 pages, illustrated with 1623 engravings. Leather, $15.00; half Russia, $16.00.

Surgery.

Cloth, $1.75. See *Students' Quiz Series*, page 30.

Young's Orthopædic Surgery.—In Press.

A Manual of Orthopædic Surgery, for Students and Practitioners. By JAMES K. YOUNG, M.D., Instructor in Orthopædic Surgery, University of Pennsylvania, Philadelphia. In one 12mo. volume of about 400 pages, fully illustrated.

Butlin on the Tongue.

Diseases of the Tongue. By HENRY T. BUTLIN, F.R.C.S., Assistant Surgeon to St. Bartholomew's Hospital, London. In one 12mo. volume of 456 pages, with 8 colored plates and 3 woodcuts. Cloth, $3.50. See *Series of Clinical Manuals*, page 30.

Gould's Surgical Diagnosis.

Elements of Surgical Diagnosis. By A. PEARCE GOULD, M.S., M.B., F.R.C.S., Assistant Surgeon to Middlesex Hospital, London. In one pocket-size 12mo. volume of 589 pages. Cloth, $2.00. See *Students' Series of Manuals*, page 30.

Schafer's Histology.—Third Edition.

The Essentials of Histology. By EDWARD A. SCHAFER, M.D., F.R.S., Jodrell Professor of Physiology in University College, London. New (third) edition. In one octavo volume of 311 pages, with 325 illustrations. Cloth, $3.00.

PEPPER'S SURGICAL PATHOLOGY. In one pocket-size 12mo. volume of 511 pages, with 81 illustrations. Limp cloth, red edges, $2.00. See *Students' Series of Manuals*, page 30.

PIRRIE'S PRINCIPLES AND PRACTICE OF SURGERY. Edited by JOHN NEILL, M.D. In one octavo volume of 784 pages, with 316 illustrations. Cloth, $3.75.

GANT'S STUDENT'S SURGERY. By FREDERICK JAMES GANT, F.R.C.S. Square octavo, 848 pages, 159 engravings. Cloth, $3.75.

MILLER'S PRACTICE OF SURGERY. Fourth and revised American edition. In one large octavo volume of 682 pages, with 361 illustrations. Cloth, $3.75.

MILLER'S PRINCIPLES OF SURGERY. Fourth American from the third Edinburgh edition. In one octavo volume of 638 pages, with 340 illustrations. Cloth, $3.75.

Erichsen's Science and Art of Surgery.—Eighth Edition.

The Science and Art of Surgery; Being a Treatise on Surgical Injuries, Diseases and Operations. By JOHN E. ERICHSEN, F.R.S., F.R.C.S., Professor of Surgery in the University College, London, etc. From the eighth and enlarged English edition. In two large octavo volumes of 2316 pages, with 984 engravings on wood. Cloth, $9.00; leather, $11.00.

For many years this classic work has been made by preference of teachers the principal text-book on surgery for medical students, while through translations into the leading continental languages it may be said to guide the surgical teachings of the civilized world. No excellence of the former edition has been dropped and no discovery, device or improvement which has marked the progress of surgery during the last decade has been omitted. The illustrations are many and executed in the highest style of art.—*Louisville Medical News*, February 14, 1885.

Bryant's Practice of Surgery.—Fourth Edition.

The Practice of Surgery. By THOMAS BRYANT, F.R.C.S., Surgeon and Lecturer on Surgery at Guy's Hospital, London. Fourth American from the fourth and revised English edition. In one large imperial octavo volume of 1040 pages, with 727 illustrations. Cloth, $6.50; leather, $7.50.

The fourth edition of this work is fully abreast of the times. The author handles his subjects with that degree of judgment and skill which is attained by years of patient toil and varied experience. The present edition is a thorough revision of those which preceded it, with much new matter added. His diction is so graceful and logical, and his explanations are so lucid, as to place the work among the highest order of text-books for the medical student. Almost every topic in surgery is presented in such a form as to enable the busy practitioner to review any subject in every-day practice in a short time. No time is lost with useless theories or superfluous verbiage. In short, the work is eminently clear, logical and practical.—*Chicago Medical Journal and Examiner*, April, 1886.

Wharton's Minor Surgery and Bandaging.

Minor Surgery and Bandaging. By HENRY R. WHARTON, M.D., Demonstrator of Surgery in the University of Pennsylvania. In one 12mo. volume of 498 pages, with 403 engravings, many being photographic. Cloth, $3.00.

This new work must take a first rank as soon as examined. Bandaging is well described by words, and the methods are illustrated by photographic drawings, so as to make plain each step taken in the application of bandages of various kinds to different parts of the body and extremities—including the head. The various operations are likewise described and illustrated, so that it would seem easy for the tyro to do the gravest amputation. The various established operations are described in detail. Hence this work becomes a most valuable companion-book to any of the more pretentious treatises on surgery, where simply the general advice is given to bandage, amputate, intubate, operate, etc. For the student and young surgeon, it is a very valuable instruction book from which to learn how to do what may be advised, in general terms, to be done.—*Virginia Medical Monthly*, October, 1891.

Treves' Operative Surgery.—Two Volumes.

A Manual of Operative Surgery. By FREDERICK TREVES, F.R.C.S., Surgeon and Lecturer on Anatomy at the London Hospital. In two octavo volumes containing 1550 pages, with 422 engravings. Complete work, cloth, $9.00; leather, $11.00.

Mr. Treves in this admirable manual of operative surgery has in each instance practically assumed that operation has been decided upon and has then proceeded to give the various operative methods which may be employed, with a criticism of their comparative value and a detailed and careful description of each particular stage of their performance. Especial attention has been paid to the preparatory treatment of the patient and to the details of the after-treatment of the case, and this is one of the most distinctive among the many excellent features of the book. We declare it the best work on the subject in the English language, and indeed, in many respects, the best in any language. It cannot fail to be of the greatest use both to practical surgeons and to those general practitioners who, owing to their isolation or to other circumstances, are forced to do much of their own operative work. We recommend the book so strongly for the excellent judgment displayed in the arduous task of selecting from among the thousands of varying procedures those most worthy of description; for the way in which the still more difficult task of choosing among the best of those has been accomplished; and for the simple, clear, straightforward manner in which the information thus gathered from all surgical literature has been conveyed to the reader.—*Annals of Surgery*, March, 1892.

Treves' Student's Hand-Book of Surgical Operations. In one square 12mo. volume of 508 pages, with 94 illustrations. Cloth, $2.50.

A Manual of Surgery. In Treatises by various Authors, edited by FREDERICK TREVES, F.R.C.S. In three 12mo. volumes, containing 1866 pages, with 213 engravings. Price per set, cloth, $6.00. See *Students' Series of Manuals*, page 30.

We have here the opinions of thirty-three authors, in an encyclopædic form for easy and ready reference. The three volumes embrace every variety of surgical affections likely to be met with, the paragraphs are short and pithy, and the salient points and the beginnings of new subjects are always printed in extra-heavy type, so that a person may find whatever information he may be in need of at a moment's glance.—*Cincinnati Lancet-Clinic*, August 21, 1886.

Treves on Intestinal Obstruction. In one 12mo. volume of 522 pages, with 60 illustrations. Limp cloth, blue edges, $2.00. See *Series of Clinical Manuals*, page 30.

Holmes' System of Surgery.—American Edition.

A System of Surgery; Theoretical and Practical. IN TREATISES BY VARIOUS AUTHORS. Edited by TIMOTHY HOLMES, M.A., Surgeon and Lecturer on Surgery at St. George's Hospital, London. AMERICAN EDITION, THOROUGHLY REVISED AND RE-EDITED by JOHN H. PACKARD, M.D. Three large octavo volumes of 3137 pages, with 979 illustrations on wood and 13 lithographic plates. Per set, cloth, $18.00; leather, $21.00. *Subscription only.*

Smith's Operative Surgery.—Revised Edition.

The Principles and Practice of Operative Surgery. By STEPHEN SMITH, M.D., Professor of Clinical Surgery in the University of the City of New York. Second and thoroughly revised edition. In one very handsome octavo volume of 892 pages, with 1005 illustrations. Cloth, $4.00; leather, $5.00.

This excellent and very valuable book is one of the most satisfactory works on modern operative surgery yet published. The book is a compendium for the modern surgeon. The present edition is much enlarged, and the text has been thoroughly revised, so as to give the most improved methods in aseptic surgery and the latest instruments known for operative work. It can be truly said that, as a handbook for the student, a companion for the surgeon, and even as a book of reference for the physician not especially engaged in the practice of surgery, this volume will long hold a most conspicuous place, and seldom will its readers, no matter how unusual the subject, consult its pages in vain. Its compact form, excellent print, numerous illustrations, and especially its decidedly practical character, all combine to commend it.—*Boston Medical and Surgical Journal*, May 10, 1888.

Holmes' Treatise on Surgery.—One Volume.

A Treatise on Surgery; Its Principles and Practice. By TIMOTHY HOLMES, M.A., Surgeon and Lecturer on Surgery at St. George's Hospital London. From the fifth English edition, edited by T. PICKERING PICK, F.R.C.S. In one octavo volume of 997 pages, with 428 illustrations. Cloth, $6.00; leather, $7.00.

To the younger members of the profession and to others not acquainted with the book and its merits, we take pleasure in recommending it as a surgery complete, thorough, well written, fully illustrated, modern, a work sufficiently voluminous for the surgeon specialist, adequately concise for the general practitioner, teaching those things that are necessary to be known for the successful prosecution of the surgeon's career, imparting nothing that in our present knowledge is considered unsafe, unscientific or inexpedient.—*Pacific Medical Journal*, July, 1889.

Hamilton on Fractures and Dislocations.—Eighth Edition.

A Practical Treatise on Fractures and Dislocations. By FRANK H. HAMILTON, M.D., LL.D., Surgeon to Bellevue Hospital, New York. New (eighth) edition, revised and edited by STEPHEN SMITH, M.D., Professor of Clinical Surgery in the University of the City of New York. In one octavo volume of 832 pages, with 507 illustrations. Cloth, $5.50; leather, $6.50.

Its numerous editions are convincing proof, if any is needed, of its value and popularity. It is preëminently the authority on fractures and dislocations, and universally quoted as such. In the new edition it has lost none of its former worth. The additions it has received by its recent revision make it a work thoroughly in accordance with modern practice theoretically, mechanically, aseptically. The task of writing a complete treatise on a subject of such magnitude is no easy one. Dr. Smith has aimed to make the present volume a correct exponent of our knowledge of this department of surgery. In examining the volume one is at once struck with the evidence of the vast amount of labor its compilation and reconstruction must have necessitated. The more one reads the more one is impressed with its completeness. The work has been accomplished, and has been done clearly, concisely and excellently well.—*Boston Medical and Surgical Journal*, May 26, 1892.

Stimson's Operative Surgery.—Second Edition.

A Manual of Operative Surgery. By LEWIS A. STIMSON, B.A., M.D., Professor of Clinical Surgery in the University of the City of New York. Second edition. In one royal 12mo. volume of 503 pages, with 342 illustrations. Cloth, $2.50.

The author knows the difficult art of condensation. Thus the manual serves as a work of reference, and at the same time as a handy guide. It teaches what it professes, the steps of operations. In this edition Dr. Stimson has sought to indicate the changes that have been effected in operative methods and procedures by the antiseptic system, and has added an account of many new operations and variations in the steps of older operations. We do not desire to extol this manual above many excellent standard British publications of the same class, still we believe that it contains much that is worthy of imitation.—*British Medical Journal*, January 22, 1887.

Stimson on Fractures and Dislocations.

A Treatise on Fractures and Dislocations. By LEWIS A. STIMSON, M.D. In two handsome octavo volumes. Volume I., FRACTURES, 582 pages, 360 illustrations. Volume II., DISLOCATIONS, 540 pages, with 163 illustrations. Complete work, cloth, $5.50; leather, $7.50. Either volume separately, cloth, $3.00; leather, $4.00.

The appearance of the second volume marks the completion of the author's original plan of preparing a work which should present in the fullest manner all that is known on the cognate subjects of Fractures and Dislocations. The volume on Fractures assumed at once the position of authority on the subject, and its companion on Dislocations will no doubt be similarly received. This volume exhibits the surgery of Dislocations as it is taught and practised by the most eminent surgeons of the present time. Containing the results of such extended researches, it must for a long time be regarded as an authority on all subjects pertaining to dislocations. Every practitioner of surgery will feel it incumbent on him to have it for constant reference.—*Cincinnati Medical News*, May, 1888.

Pick on Fractures and Dislocations.

Fractures and Dislocations. By T. PICKERING PICK, F.R.C.S., Surgeon to and Lecturer on Surgery at St. George's Hospital, London. In one 12mo. volume of 530 pages, with 93 illustrations. Limp cloth, $2.00. See *Series of Clinical Manuals*, page 30.

Marsh on the Joints.

Diseases of the Joints. By HOWARD MARSH, F.R.C.S., Senior Assistant Surgeon to St. Bartholomew's Hospital, London. In one 12mo. volume of 468 pages, with 64 woodcuts and a colored plate. Cloth, $2.00. See *Series of Clinical Manuals*, page 30.

JUST READY.

A Text-book of Ophthalmology.

By WILLIAM F. NORRIS, M.D., *Professor of Ophthalmology in the University of Pennsylvania.* and CHARLES A. OLIVER, M.D., *Surgeon to Wills Eye Hospital, Philadelphia.*

In one very handsome octavo volume of 641 pages, with 357 engravings and 5 colored plates. Cloth, $5.00; leather, $6.00.

The preparation of this magnificent work has engaged its eminent authors during a period exceeding seven years, their effort being to produce a guide for the student and practitioner which should represent the most advanced state of its science in the clearest possible manner. The volume embodies not only the results of large personal experience but also of most extensive acquaintance with the vast and rich literature of its department. By a careful selection of material and the employment of a terse style the Authors have presented an ample working knowledge of their subject in a volume of convenient size. The series of illustrations is singularly rich and is thoroughly in keeping with the literary material which it embellishes. The volume is assured of the foremost position as a text-book and work of reference.

Berry on the Eye.—New Edition. Just Ready.

Diseases of the Eye. A Practical Treatise for Students of Ophthalmology. By GEORGE A. BERRY, M.B., F.R.C.S., Ed., Ophthalmic Surgeon, Edinburgh Royal Infirmary. New (second) edition. In one octavo volume of 750 pages, and 197 illustrations, mostly lithographic. Cloth, $8.00.

The most notable feature of Berry's book is its wealth of beautifully colored illustrations introduced throughout in immediate connection with the related text. The present edition contains a large number of these that are entirely new, making in all eighty-seven, the finest collection of such illustrations of the normal and pathological appearances of the eye to be found in any work published in the English language. To the practitioner who has not the advantage of a large special clinic in which to become familiar with the rarer forms of eye disease, such illustrations are invaluable.—*Philadelphia Polyclinic*, June 15, 1893.

We are glad to see that a new edition of Mr. Berry's excellent manual has been called for. It has been enlarged to the extent of about fifty pages. The chapters have been rearranged and in many instances considerably augmented. The work is extremely well written, so that it gives the student a fairly complete account of the diseases of the eye he is likely to meet with in practice, and the treatment recommended may be thoroughly relied on as the result of careful observation and of considerable experience.—*The Lancet, London*, April 29, 1893.

Juler's Ophthalmic Science & Practice.—New Ed. Just Ready.

A Handbook of Ophthalmic Science and Practice. By HENRY E. JULER, F.R.C.S., Ophthalmic Surgeon to St. Mary's Hospital, Surgeon to the Royal Westminster Ophthalmic Hospital, London. New (second) edition, revised and enlarged. In one handsome octavo volume of 562 pages, with 201 engravings, 17 colored plates, test-types and color blindness test. Cloth, $5.50; leather, $6.50.

It is but comparatively a few years since the profession first had the opportunity of studying and appreciating the exhaustive and scientific work on ophthalmic science and practice from the pen of Mr. Juler. In that work, the second edition of which we now have the pleasure of noticing, the author was eminently successful in giving concise descriptions and typical illustrations of all the most important affections of the eye and of its appendages. The second edition of Mr. Juler's work has, we know, been anxiously waited for. The author has made numerous alterations and additions, alike in the text and in the illustrations, so that the reader is provided in a readable form, and with a conciseness thoroughly compatible with accuracy of description, with all that is most modern on the subject of ophthalmology. We would especially refer our readers to the chapter on the refraction of the eye, a subject of essential importance in the diagnosis and treatment of optical errors. We confidently anticipate a most cordial welcome to this work alike by students and practitioners of medicine.—*The Practitioner*, July, 1893.

Nettleship on the Eye.—Fifth Edition.

Diseases of the Eye. By EDWARD NETTLESHIP, F.R.C.S., Ophthalmic Surgeon at St. Thomas' Hospital, London. Surgeon to the Royal London (Moorfields) Ophthalmic Hospital. Fourth American from the fifth English edition, thoroughly revised. With a Supplement on the Detection of Color Blindness, by WILLIAM THOMSON, M.D., Professor of Ophthalmology in the Jefferson Medical College, Philadelphia. In one 12mo. volume of 500 pages, with 164 illustrations, selections from Snellen's test-types and formulæ, and a colored plate. Cloth, $2.00.

This is a well-known and a valuable work. It was primarily intended for the use of students, and supplies their needs admirably, but it is as useful for the practitioner, or indeed more so. It does not presuppose the large amount of recondite knowledge to be present which seems to be assumed in some of our larger works, is not tedious from over-conciseness, and yet covers the more important parts of clinical ophthalmology.—*New York Medical Journal*, Dec. 13, 1890.

Eye, Ear, Throat and Nose. Cloth, $1.00. See *Students' Quiz Series*, page 30.

Carter & Frost's Ophthalmic Surgery.

Ophthalmic Surgery. By R. BRUDENELL CARTER, F.R.C.S., Lecturer on Ophthalmic Surgery at St. George's Hospital, London, and W. ADAMS FROST, F.R.C.S., Joint Lect. on Oph. Surgery at St. George's Hospital, London. In one 12mo. volume of 559 pages, with 91 woodcuts, color-blindness test, test-types and dots, and appendix of formulæ. Cloth, $2.25. See *Series of Clinical Manuals*, p. 30.

WELLS ON THE EYE. In one octavo volume.

LAWSON ON INJURIES TO THE EYE, ORBIT AND EYELIDS: Their Immediate and Remote Effects. Octavo of 404 pages, with 92 illustrations. Cloth, $3.50.

LAURENCE AND MOON'S HANDY BOOK OF OPHTHALMIC SURGERY, for the use of Practitioners. Second edition. In one octavo volume of 227 pages, with 65 illustrations. Cloth, $2.75.

Burnett on the Ear.—Second Edition.

The Ear; Its Anatomy, Physiology and Diseases. A Practical Treatise for the Use of Medical Students and Practitioners. By CHARLES H. BURNETT, A.M., M.D., Professor of Otology in the Philadelphia Polyclinic; President of the American Otological Society. Second edition. In one handsome octavo volume of 580 pages, with 107 illustrations. Cloth, $4.00; leather, $5.00.

We note with pleasure the appearance of a second edition of this valuable work. When it first came out it was accepted by the profession as one of the few standard works on modern aural surgery in the English language, and in his second edition Dr. Burnett has fully maintained his reputation, for the book is replete with valuable information and suggestion. The revision has been carefully carried out and much new matter added. Dr. Burnett's work must be regarded as a very valuable contribution to aural surgery, not only on account of its comprehensiveness, but because it contains the results of the careful personal observation and experience of this eminent aural surgeon.—*London Lancet*, February 21, 1885.

We are very glad, after many years' use of the first, to welcome the second edition of this excellent text-book to our shelves. The first 138 pages are devoted to a lucid account of the anatomy, histology and physiology of this most complex organ. The cuts which accompany this part of the work will prove of much use to the student. The second part of the work consists of a clear and terse account of the diseases of the ear and their treatment. In the latter department the rules laid down are eminently practical. We can cordially commend the book to all who wish a text-book on the ear.—*New Orleans Medical and Surgical Journal*, February, 1885.

Field's Manual of Diseases of the Ear.—Just Ready.

A Manual of Diseases of the Ear. By GEORGE P. FIELD, M.R.C.S., Aural Surgeon and Lecturer on Aural Surgery in St. Mary's Hospital School, London. Fourth edition. In one octavo volume of 391 pages, with 73 engravings and 21 colored plates. Cloth, $3.75.

There can be no question of the need of more perfect knowledge of the pathology of the ear, on the part of general practitioners of medicine. Professor Field has given us a work which makes clear the intricacies of aural anatomy and pathology by the exactness and multiplicity of its illustrations no less than by the explanations of the text. Its popularity is evidenced by the fact that three editions have already been disposed of, the last numbering 3000 copies. The work has, of course, been revised to keep pace with the times.—*The Medical Age*, July 25, 1893.

This book is written by an authority on this subject, and may be recommended as a good text-book for the student and a safe and reliable guide for the practitioner.—*Edinburgh Medical Journal*, May, 1893.

Politzer's Text-Book of Diseases of the Ear.—New Ed. In Press.

A Text-Book of Diseases of the Ear and Adjacent Organs. By DR. ADAM POLITZER, Imperial-Royal Professor of Aural Therapeutics in the University of Vienna. Translated into English. In one large octavo volume of about 800 pages, with about 300 engravings.

Browne on the Throat and Nose.—New Ed. Just Ready.

The Throat and Nose and Their Diseases. By LENNOX BROWNE, F.R.C.S., E., Senior Physician to the Central London Throat and Ear Hospital. Fourth and enlarged edition. In one imperial octavo volume of about 750 pages, with 120 illustrations in color, and 235 engravings on wood. Cloth, $6.50. *A few notices of the previous edition are appended.*

The beautiful and typical colored plates form a valuable and instructive atlas, the equal of which is not to be found in any modern work treating of these subjects. Mr. Lennox Browne is to be congratulated on having produced the best practical text-book on diseases of the throat and nose extant. We are glad to learn that it is being translated into French and German.—*The Provincial Medical Journal*, August 1, 1890.

As a practical work on the treatment of diseases of the throat and nose this will be found an exceedingly valuable volume. The methods are fully set forth in the text, and references are made to a very complete and valuable list of formulæ. The engravings are upon wood, and all reproductions from the author's pen and ink drawings, by the photo-engraving process. Fifteen colored lithographic plates containing one hundred and twenty illustrations give an added value to the volume. While this work will be of essential service to the specialist it is one that should find a place in the library of every practising physician. It serves admirably to illustrate the progress that is being made in medical literature and especially in the departments which are considered.—*Journal of the American Medical Asso.*, Dec. 6, 1890.

Seiler on the Throat and Nose.—New (4th) Ed. Just Ready.

A Handbook of Diagnosis and Treatment of Diseases of the Throat, Nose and Naso-Pharynx. By CARL SEILER, M.D., Lecturer on Laryngoscopy in the University of Pennsylvania. New (fourth) edition. In one handsome 12mo. volume of 414 pages, with 107 illustrations and 2 colored plates. Cloth, $2.25.

The mere fact that this work has reached a fourth edition is sufficient evidence that it fills a want long felt by "average general practitioners." As a book of quick, ready reference it has no rival in the field of laryngology, and the directions are usually such as to be readily carried out, even by comparative tyros in the work. The first five chapters deal with the anatomy, physiology and methods of examination of the upper respiratory tract, and are most clear and practical, and are also excellently illustrated. This edition will probably be eagerly welcomed by those for whom it was written, and will be a useful addition to libraries of students and general practitioners.—*Medical News*, July 15, 1893.

The fourth edition of this work is up to the required standard, which is the highest for one of its scope. It is concise and practical, treating of the commoner diseases of the throat and naso-pharynx, and presenting the salient features in an intelligible and interesting manner.—*Medical Record*, June 24, 1893.

The fourth edition of Seiler's admirable work should be warmly received by both practitioners and students, as it well deserves. There is no special work of its size, on diseases of the throat and nose, that contains more information; yet it is arranged in such a concise, compact form that it makes an exceedingly handy reference book for the busy practitioner as well as a good text-book for the student.—*Pacific Medical Record*, May, 1893.

Diseases of the Eye, Ear, Throat and Nose.

Cloth, $1.00. See *Students' Quiz Series*, page 30.

BROWNE ON KOCH'S REMEDY IN RELATION TO THROAT CONSUMPTION. In one octavo volume of 121 pages, with 45 illustrations, 4 of which are colored, and 17 charts. Cloth, $1.50.

Roberts on Urinary and Renal Diseases.—Fourth Edition.

A Practical Treatise on Urinary and Renal Diseases, including Urinary Deposits. By SIR WILLIAM ROBERTS, M.D., Lecturer on Medicine in the Manchester School of Medicine, etc. Fourth American from the fourth London edition. In one handsome octavo volume of 609 pages, with 81 illustrations. Cloth, $3.50.

It may be said to be the best book in print on the subject of which it treats.—*The American Journal of the Medical Sciences*, January, 1886.

The peculiar value and finish of the book are in a measure derived from its resolute maintenance of a clinical and practical character. It is an unrivalled exposition of everything which relates directly or indirectly to the diagnosis, prognosis and treatment of urinary diseases, and possesses a completeness not found elsewhere in our language in its account of the different affections.—*The Manchester Medical Chronicle*, July, 1885.

Purdy on Bright's Disease and Allied Affections.

Bright's Disease and Allied Affections of the Kidneys. By CHARLES W. PURDY, M.D., Professor of Genito-Urinary and Renal Diseases in the Chicago Polyclinic. In one octavo volume of 288 pages, with illustrations. Cloth, $2.00.

The object of this work is to "furnish a systematic, practical and concise description of the pathology and treatment of the chief organic diseases of the kidney associated with albuminuria, which shall represent the most recent advances in our knowledge on these subjects;" and this definition of the object is a fair description of the book. The work is a useful one, giving in a short space the theories, facts and treatments, and going more fully into their later developments. On treatment the writer is particularly strong, steering clear of generalities, and seldom omitting, what text-books usually do, the unimportant items which are all important to the general practitioner.—*The Manchester Medical Chronicle*, October, 1886.

Gross on the Urinary Organs.

A Practical Treatise on the Diseases, Injuries and Malformations of the Urinary Bladder, the Prostate Gland and the Urethra. By SAMUEL D. GROSS, M.D., LL.D., D.C.L., etc. Third edition, thoroughly revised by SAMUEL W. GROSS, M.D. In one octavo volume of 574 pages, with 170 illustrations. Cloth, $4.50.

Morris on Surgical Diseases of the Kidney.

Surgical Diseases of the Kidney. By HENRY MORRIS, F.R.C.S., Surgeon to the Middlesex Hospital, London. 12mo. 554 pages, with 40 woodcuts, and 6 colored plates. Limp cloth, $2.25. See *Series of Clinical Manuals*, page 30.

Thompson on the Urinary Organs.

Lectures on Diseases of the Urinary Organs. By SIR HENRY THOMPSON, Surgeon and Professor of Clinical Surgery to University College Hospital, London. Second American from the third English edition. In one octavo volume of 203 pages, with 25 illustrations. Cloth, $2.25.

Thompson on the Pathology and Treatment of Stricture of the Urethra and Urinary Fistulæ. From the third English edition. In one octavo volume of 359 pages, with 47 engravings and 3 plates. Cloth, $3.50.

The American System of Dentistry.

In Treatises by Various Authors. Edited by WILBUR F. LITCH, M.D., D.D.S., Professor of Prosthetic Dentistry, Materia Medica and Therapeutics in the Pennsylvania College of Dental Surgery. In three very handsome octavo volumes containing 3160 pages, with 1863 illustrations and 9 full-page plates. Per volume, cloth, $6.00; leather, $7.00; half Morocco, gilt top, $8.00. *For sale by subscription only.*

As an encyclopædia of Dentistry it has no superior. It should form a part of every dentist's library, as the information it contains is of the greatest value to all engaged in the practice of dentistry.—*American Journal of Dental Science*, September, 1886.

A grand system, big enough and good enough and handsome enough for a monument (which doubtless it is) to mark an epoch in the history of dentistry. Dentists will be satisfied with it and proud of it—they must. It is sure to be precisely what the student needs to put him and keep him in the right track, while the profession at large will receive incalculable benefit from it.—*Odontographic Journal*, January, 1887.

Coleman's Dental Surgery.—American Edition.

A Manual of Dental Surgery and Pathology. By ALFRED COLEMAN, L.R.C.P., F.R.C.S., Exam. L.D.S., Senior Dental Surgeon and Lecturer on Dental Surgery at St. Bartholomew's Hospital and the Dental Hospital, London. Thoroughly revised and adapted to the use of American Students, by THOMAS C. STELLWAGEN, M.A., M.D., D.D.S., Professor of Physiology in the Philadelphia Dental College. In one handsome octavo volume of 412 pages, with 331 illustrations. Cloth, $3.25.

It should be in the possession of every practitioner in this country. The part devoted to first and second dentition and irregularities in the permanent teeth is fully worth the price. In fact, price should not be considered in purchasing such a work. If the money put into some of our *so-called* standard text-books could be converted into such publications as this, much good would result.—*Southern Dental Journal*, May, 1882.

BASHAM ON RENAL DISEASES: A Clinical Guide to their Diagnosis and Treatment. In one 12mo. volume of 304 pages, with 21 illustrations. Cloth, $2.00.

Taylor's Clinical Atlas of Venereal and Skin Diseases.

A Clinical Atlas of Venereal and Skin Diseases: Including Diagnosis, Prognosis and Treatment. By ROBERT W. TAYLOR, A.M., M.D., Clinical Professor of Genito-Urinary Diseases in the College of Physicians and Surgeons, New York; Surgeon to the Department of Venereal and Skin Diseases of the New York Hospital; President of the American Dermatological Association. In eight large folio parts, measuring 14 x 18 inches, and comprising 58 beautifully colored plates with 213 figures, and 431 pages of text with 85 engravings. Price, per part, $2.50. Bound in one volume, half Russia, $27.00; half Turkey Morocco, $28.00. *For sale by subscription only.* Specimen plates sent on receipt of 10 cents. A full prospectus sent to any address on application.

It would be hard to use words which would perspicuously enough convey to the reader the great value of this *Clinical Atlas*. This *Atlas* is more complete even than an ordinary course of clinical lectures, for in no one college or hospital course is it at all probable that all of the diseases herein represented would be seen. It is also more serviceable to the majority of students than attendance upon clinical lectures, for most of the students who sit on remote seats in the lecture hall cannot see the subject as well as the office student can examine these true-to-life chromo-lithographs. Comparing the text to a lecturer, it is more satisfactory in exactness and fulness than he would be likely to be in lecturing over a single case. Indeed, this *Atlas* is invaluable to the general practitioner, for it enables the eye of the physician to make diagnosis of a given case of skin manifestation by comparing the case with the picture in the *Atlas*, where will be found also the text of diagnosis, pathology, and full sections on treatment.—*Virginia Medical Monthly*, December, 1889.

Taylor on Venereal Diseases.—Sixth Edition. Preparing.

The Pathology and Treatment of Venereal Diseases. Including the results of recent investigations upon the subject. By ROBERT W. TAYLOR, A.M., M.D., Clinical Professor of Genito-Urinary Diseases in the College of Physicians and Surgeons, New York, Professor of Venereal and Skin Diseases in the University of Vermont. Being the sixth edition of Bumstead and Taylor. Entirely rewritten by Dr. Taylor. Large octavo volume, about 900 pages, with about 150 engravings, as well as numerous chromo-lithographs. *In active preparation.*

Gross on Impotence, Sterility, etc.—Fourth Edition.

A Practical Treatise on Impotence, Sterility, and Allied Disorders of the Male Sexual Organs. By SAMUEL W. GROSS, A.M., M.D., LL.D., Professor of the Principles of Surgery and of Clinical Surgery in the Jefferson Medical College of Philadelphia. Fourth edition, thoroughly revised by F. R. STURGIS, M.D., Professor of Diseases of the Genito-Urinary Organs and of Venereal Diseases, New York Post-Graduate Medical School. In one octavo volume of 165 pages, with 18 illustrations. Cloth, $1.50.

Three editions of Professor Gross' valuable book have been exhausted, and still the demand is unsupplied. Dr. Sturgis has revised and added to the previous editions, and the new one appears more complete and more valuable than before. Four important and generally misunderstood subjects are treated—impotence, sterility, spermatorrhœa, and prostatorrhœa. The book is a practical one and in addition to the scientific and very interesting discussions on etiology, symptoms, etc., there are lines of treatment laid down that any practitioner can follow and which have met with success in the hands of author and editor.—*Medical Record*, February 25, 1891.

Culver & Hayden's Manual of Venereal Diseases.

A Manual of Venereal Diseases. By EVERETT M. CULVER, M.D., Pathologist and Assistant Attending Surgeon, Manhattan Hospital, New York, and JAMES R. HAYDEN, M.D., Chief of Clinic, Venereal Department, College of Physicians and Surgeons, New York. In one 12mo. volume of 289 pages, with 33 illustrations. Cloth, $1.75.

This book is a practical treatise, presenting in a condensed form the essential features of our present knowledge of the three venereal diseases, syphilis, chancroid and gonorrhea. We have examined this work carefully and have come to the conclusion that it is the most concise, direct and able treatise that has appeared on the subject of venereal diseases for the general practitioner to adopt as a guide. The general practitioner needs a few simple, concise and and clearly presented laws, in the execution of which he cannot fail either to cure or prevent the ravages of the maladies in question and their direful results.—*Buffalo Medical and Surgical Journal*, May, 1892.

Genito-Urinary and Venereal Diseases.

Cloth, $1.00. See *Students' Quiz Series*, page 30.

Cornil on Syphilis.

Syphilis, its Morbid Anatomy, Diagnosis and Treatment. By V. CORNIL, Professor to the Faculty of Medicine of Paris, and Physician to the Lourcine Hospital. Specially revised by the Author, and translated with notes and additions by J. HENRY C. SIMES, M.D., Demonstrator of Pathological Histology in the University of Pennsylvania, and J. WILLIAM WHITE, M.D., Lecturer on Venereal Diseases, University of Pennsylvania. In one handsome octavo volume of 461 pages, with 84 very beautiful illustrations. Cloth, $3.75.

Hutchinson on Syphilis.

Syphilis. By JONATHAN HUTCHINSON, F.R.S., F.R.C.S., Consulting Surgeon to the London Hospital. In one 12mo. volume of 542 pages, with 8 chromo-lithographs. Cloth, $2.25. See *Series of Clinical Manuals*, page 30.

HILL ON SYPHILIS AND LOCAL CONTAGIOUS DISORDERS. In one octavo volume of 479 pages. Cloth, $3.25.

LEE'S LECTURES ON SYPHILIS AND SOME FORMS OF LOCAL DISEASE AFFECTING THE ORGANS OF GENERATION. In one octavo volume of 246 pages. Cloth, $2.25.

Hyde on the Skin.—Second Edition.

A Practical Treatise on Diseases of the Skin. For the use of Students and Practitioners. By J. Nevins Hyde, A.M., M.D., Professor of Dermatology and Venereal Diseases in Rush Medical College, Chicago. Second edition. In one octavo volume of 676 pages, with 2 colored plates and 85 illustrations. Cloth, $4.50; leather, $5.50.

We can heartily recommend it, not only as an admirable text-book for teacher and student, but in its clear and comprehensive rules for diagnosis, its sound and independent doctrines in pathology, and its minute and judicious directions for the treatment of disease, as a most satisfactory and complete practical guide for the physician.—*The American Journal of the Medical Sciences*, July, 1888.

In this volume the author has supplied the student with a work of standard value. While thorough and comprehensive in the description of disease, it is especially helpful in the matter of treatment. In this regard it leaves nothing to the presumed knowledge of the reader, but enters thoroughly into the most minute descriptions, so that one is not only told what should be done under given conditions, but how to do it as well. Care has been taken also to render the nomenclature as clear and unconfusing as the present state of dermatology will admit. The book is one we can heartily recommend as a valuable and creditable addition to American dermatological literature, and a reliable guide to students and practitioners in the requirements of the circumstances of both.—*The American Practitioner and News*, September 29, 1888.

Jackson's Ready-Reference Handbook of Skin Diseases.

The Ready-Reference Handbook of Diseases of the Skin. By George Thomas Jackson, M.D., Professor of Dermatology, Woman's Medical College of the New York Infirmary. In one 12mo. volume of 544 pages, with 50 illustrations and a colored plate. Cloth, $2.75.

Intended to serve as a reference book for the general practitioner, "no attempt has been made to discuss debateable questions," and "hence pathology and etiology do not receive as full consideration as symptomatology, diagnosis and treatment." The alphabetical arrangement of diseases, so universal now in books of this class, has been followed by Dr. Jackson, and he has inserted so many synonyms and titles from foreign languages, that the book may be turned to even by the specialist in skin diseases as a convenient dictionary of dermatological nomenclature. After a short and condensed account of the anatomy and physiology of the skin, the author presents a few notes of common and practical importance on diagnosis and therapeutics, which are followed by his well-known and graphic dermatological "Don'ts." Part II. treats in alphabetical order of the diseases of the skin and their management. This book seems to us the best of its class that has yet appeared.—*Boston Medical and Surgical Journal*, May 18, 1893.

Pye-Smith on Diseases of the Skin.—Just Ready.

A Handbook of Diseases of the Skin. By P. H. Pye-Smith, M.D., F.R.S., Physician to Guy's Hospital, London. Octavo, 407 pages, with 26 illus., 18 of which are colored. Cloth, $2.00.

The book is an excellent one, and we commend it to all interested in the subject. It is written by one entirely familiar with skin diseases, both from the stand-point of the specialist and the general practitioner. It is written in an easy and attractive style, showing familiarity with the whole field of general medicine as well as the particular diseases described, which is in striking contrast to the contents of the average handbook, from which, as a rule, the reader learns but little. Dr. Pye-Smith is favorably known as one of the eminent physicians to Guy's Hospital, and we have no hesitation in saying that he has written an original and valuable handbook of skin diseases, sound and practical in all its bearings.—*International Med. Magazine*, July, 1893.

It is a plain, practical treatise on dermatology, written for the student and general practitioner by a general practitioner of broad experience in the special subject of which he writes. By grouping the various diseases in as easy and natural a manner as possible, and dropping many of the old, confusing terms, he simplifies the nomenclature and succeeds in removing much of the difficulty that lies in the way of its study. After reviewing the recent advances made in this department of medicine, he pays a merited compliment to the "important contributions made by the newest school of dermatology, that of America."—*Pittsburg Medical Record*, June, 1893.

Hardaway's Manual of Skin Diseases.

Manual of Skin Diseases. With Special Reference to Diagnosis and Treatment. For the Use of Students and General Practitioners. By W. A. Hardaway, M.D., Professor of Skin Diseases in the Missouri Medical College. In one 12mo. volume of 440 pages. Cloth, $3.00.

Dr. Hardaway's large experience as a teacher and writer has admirably fitted him for the difficult task of preparing a book which, while sufficiently elementary for the student, is yet sufficiently thorough and comprehensive to serve as a book of reference for the general practitioner. It embraces all essential points connected with the diagnosis and treatment of diseases of the skin, and we have no hesitation in commending it as the best manual that has yet appeared in this department of medicine.—*Journal of Cutaneous and Genito-Urinary Diseases.*

This little manual is divided into three parts, the first portion being devoted to a general introduction on Symptomatology, Etiology, Diagnosis and Treatment, which is brief, practically complete and clearly stated. The second part considers the clinical characters of the various skin affections in a most satisfactory manner, special stress being placed upon diagnosis and treatment. It concludes with an appendix of special formulæ, selected by the author, and a diet table.—*Buffalo Medical and Surgical Journal*, April 1, 1893.

Jamieson on Diseases of the Skin.—Third Edition.

Diseases of the Skin. A Manual for Students and Practitioners. By W. Allan Jamieson, M.D., Lecturer on Diseases of the Skin, School of Medicine, Edinburgh. Third edition, revised and enlarged. In one octavo volume of 656 pages, with woodcut and 9 double-page chromo-lithographic illustrations. Cloth, $6.00.

The first edition of this work appeared in 1888, and the following year a second. The scope of the work is essentially clinical, little reference being made to pathology or disputed theories. Almost every subject is followed by illustrative cases taken from the author's practice, and the reader is constantly reminded that he has before him a record of personal experience. The pages are filled with interest to all those occupied with skin diseases. The general practitioner will find the book of great value in matters of diagnosis and treatment. The latter is quite up to date, and the formulæ have been selected with care.—*Medical Record*, April 9, 1892.

Diseases of the Skin. Cloth, $1.00.

See *Students' Quiz Series*, page 30.

FOX'S EPITOME OF SKIN DISEASES. WITH FORMULÆ. Third edition, revised and enlarged. In one 12mo. volume of 238 pages. Cloth, $1.25.

HILLIER'S HANDBOOK OF SKIN DISEASES; for Students and Practitioners. Second American edition. In one 12mo. volume of 353 pages, with plates. Cloth, $2.25.

WILSON'S STUDENT'S BOOK OF CUTANEOUS MEDICINE AND DISEASES OF THE SKIN. In one handsome small octavo volume of 535 pages. Cloth, $3.50.

THE AMERICAN SYSTEMS OF

Gynecology and Obstetrics

IN TREATISES BY VARIOUS AUTHORS.

Gynecology edited by
MATTHEW D. MANN, A.M., M.D.,
Professor of Obstetrics and Gynecology in the Medical Department of the University of Buffalo.

and

Obstetrics edited by
BARTON COOKE HIRST, M.D.,
Professor of Obstetrics in the University of Pennsylvania, Philadelphia.

In four very handsome octavo volumes, containing 3612 pages, 1092 engravings and 8 plates. Complete work *now ready.* Per volume: Cloth, $5.00; leather, $6.00; half Russia, $7.00. *For sale by subscription only. Address the Publishers.* Full descriptive circular free on application.

These volumes are the contributions of the most eminent gentlemen of this country in these departments of the profession. Each contributor presents a monograph upon his special topic, so that everything in the way of history, theory, methods and results is presented to our fullest need. As a work of general reference, it will be found remarkably full and instructive in every direction of inquiry.—*The Obstetric Gazette*, September, 1889.

One is at a loss to know what to say of this volume, for fear that just and merited praise may be mistaken for flattery. The papers of Drs. Engelmann, Martin, Hirst, Jaggard and Reeve are incomparably beyond anything that can be found in obstetrical works.—*Journal of the American Medical Association*, September 8, 1888.

In our notice of the "System of Practical Medicine by American Authors," we made the following statement: "It is a work of which the profession in this country can feel proud. Written exclusively by American physicians who are acquainted with all the varieties of climate in the United States, the character of the soil, the manners and customs of the people, etc., it is peculiarly adapted to the wants of American practitioners of medicine, and it seems to us that every one of them would desire to have it." Every word thus expressed in regard to the "American System of Practical Medicine" is applicable to the "System of Gynecology by American Authors." It, like the other, has been written exclusively by American physicians who are acquainted with all the characteristics of American people, who are well informed in regard to the peculiarities of American women, their manners, customs, modes of living, etc. As every practising physician is called upon to treat diseases of females, and as they constitute a class to which the family physician must give attention, and cannot pass over to a specialist, we do not know of a work in any department of medicine that we should so strongly recommend medical men generally to purchase.—*Cincinnati Medical News*, July, 1887.

Emmet's Gynæcology.—Third Edition.

The Principles and Practice of Gynæcology; For the use of Students and Practitioners of Medicine. By THOMAS ADDIS EMMET, M.D., LL.D., Surgeon to the Woman's Hospital, New York, etc. Third edition, thoroughly revised. In one large and very handsome octavo volume of 880 pages, with 150 illustrations. Cloth, $5.00; leather, $6.00.

We are in doubt whether to congratulate the author more than the profession upon the appearance of the third edition of this well-known work. Embodying, as it does, the life-long experience of one who has conspicuously distinguished himself as a bold and successful operator, and who has devoted so much attention to the specialty, we feel sure the profession will not fail to appreciate the privilege thus offered them of perusing the views and practice of the author. His earnestness of purpose and conscientiousness are manifest. He gives not only his individual experience but endeavors to represent the actual state of gynæcological science and art.—*British Medical Journal*, May 16, 1885.

Gynecology. Cloth, $1.00.

See *Students' Quiz Series*, page 30.

Tait's Diseases of Women and Abdominal Surgery.

Diseases of Women and Abdominal Surgery. By LAWSON TAIT, F.R.C.S., Professor of Gynecology in Queen's College, Birmingham, late President of the British Gynecological Society, Fellow of the American Gynecological Society. In two octavo volumes. Volume I., 554 pages, 62 engravings and 3 plates. Cloth, $3.00. Volume II., *preparing.*

Mr. Tait never writes anything that does not command attention by reason of the originality of his ideas and the clear and forcible manner in which they are expressed. This is eminently true of the present work. Germs of truth are thickly scattered throughout; single happily worded sentences express what another author would have expanded into pages. Useful hints on the technique of surgical operations, ingenious theories on pathology, daring innovations on long-established rules—these succeed one another with a bewildering rapidity. His position has long been assured; it is hardly possible for him to add to his great reputation as a daring and original surgeon. Few reformers have ever enjoyed the present reward of their labors in such full measure as he. We cannot repress our admiration for the restless genius of the great surgeon.—*American Journal of the Medical Sciences*, June, 1890.

Edis on Diseases of Women.

The Diseases of Women. Including their Pathology, Causation, Symptoms, Diagnosis and Treatment. A Manual for Students and Practitioners. By ARTHUR W. EDIS, M.D., Lond., F.R.C.P., M.R.C.S., Assistant Obstetric Physician to Middlesex Hospital, late Physician to British Lying-in-Hospital. In one octavo volume of 576 pages, with 148 illustrations. Cloth, $3.00; leather, $4.00.

The special qualities which are conspicuous are thoroughness in covering the whole ground, clearness of description and conciseness of statement. Another marked feature of the book is the attention paid to the details of many minor surgical operations and procedures, as, for instance, the use of tents, application of leeches, and use of hot-water injections. These are among the more common methods of treatment, and yet very little is said about them in many of the text-books. The book is one to be warmly recommended, especially to students and general practitioners, who need a concise but complete *résumé* of the whole subject. Specialists, too, will find many useful hints in its pages.—*Boston Medical and Surgical Journal*, March 2, 1882.

HODGE ON DISEASES PECULIAR TO WOMEN Including Displacements of the Uterus. Second edition, revised and enlarged. In one beautifully printed octavo volume of 519 pages, with original illustrations. Cloth, $4.50.

WEST'S LECTURES ON THE DISEASES OF WOMEN. Third American from the third London edition. In one octavo volume of 543 pages. Cloth, $3.75; leather, $4.75.

Thomas & Mundé on Diseases of Women.—Sixth Edition.

A Practical Treatise on the Diseases of Women. By T. Gaillard Thomas, M.D., LL.D., Emeritus Professor of Diseases of Women in the College of Physicians and Surgeons, New York, and Paul F. Mundé, M.D., Professor of Gynecology in the New York Polyclinic. New (sixth) edition, thoroughly revised and rewritten by Dr. Mundé. In one large and handsome octavo volume of 824 pages, with 347 illustrations, of which 201 are new. Cloth, $5.00; leather, $6.00.

The profession has sadly felt the want of a text-book on diseases of women, which should be comprehensive and at the same time not diffuse, systematically arranged so as to be easily grasped by the student of limited experience, and which should embrace the wonderful advances which have been made within the last two decades. Thomas' work fulfilled these conditions, and the announcement that a new edition was about to be issued, revised by so competent a writer as Dr. Mundé, was hailed with delight. Dr. Mundé brings to his work a most practical knowledge of the subjects of which he treats and an exceptional acquaintance with the world's literature of this important branch of medicine. The result is what is, perhaps, on the whole, the best practical treatise on the subject in the English language. The original work is preserved as a basis, but amplified and enriched with the results of modern research. Much has been interspersed with the old material and several new chapters added. It is, as we have said, the best text-book we know, and will be of especial value to the general practitioner as well as to the specialist. The illustrations are very satisfactory. Many of them are new and are particularly clear and attractive. The book will undoubtedly meet with a favorable reception from the profession.—*Boston Medical and Surgical Journal*, January 14, 1892.

This work, which has already gone through five large editions, and has been translated into French, German, Spanish and Italian, is too well known to require commendation now upon the appearance of this, the sixth edition. It has been thoroughly revised and brought up to date by Dr. Mundé, who is announced as joint author. Many new illustrations have been added, and the text has been increased by the addition of new chapters. The distinctive features of the work, which made it so attractive when first issued, have in a measure been retained, so that it continues to be the most practical and at the same time the most complete treatise upon the subject in print, the changes that have been made only increasing its value.—*The Archives of Gynecology, Obstetrics and Pediatrics*, February, 1891.

Sutton on the Ovaries and Fallopian Tubes.

Surgical Diseases of the Ovaries and Fallopian Tubes, including Tubal Pregnancy. By J. Bland Sutton, F.R.C.S., Assistant Surgeon to the Middlesex Hospital, London. In one crown octavo volume of 544 pages, with 119 engravings and 5 colored plates. Cloth, $3.00.

This is not a book to be read and then shelved; it is one to be studied. It is not based upon hypotheses but upon facts. It makes pathology practical, and inculcates a practice based upon pathology. It is succinct, yet thorough; practical, yet scientific; conservative, yet bold. It is probably on the table of all gynecologists; but it is not for them alone; the general practitioner needs just such a book. It will be of immense service to him in the study of pelvic diseases, and will assuredly open his eyes to the progress made by conscientious, painstaking workers like Dr. Sutton in the field of pathology and differential diagnosis.—*International Medical Magazine*, September, 1892.

Mr. Sutton has written a book which deserves unstinted praise for the clearness with which it presents the subject and for the originality of the material. No specialist should fail to read it, and it is so written as to be of the greatest service to the general practitioner who wishes to post himself upon the subject of which it treats.—*New York Journal of Gynecology and Obstetrics*, June, 1892.

Davenport's Non-Surgical Gynecology.—Second Edition.

Diseases of Women, a Manual of Non-Surgical Gynecology. Designed especially for the Use of Students and General Practitioners. By Francis H. Davenport, M.D., Assistant in Gynecology in the Medical Department of Harvard University, Boston. Second edition. In one handsome 12mo. volume of 314 pages, with 107 illustrations. Cloth, $1.75.

The first edition of Dr. Davenport's book, which was published three years ago, evidently met with the reception it deserved, or the second edition would not have followed so soon. The title is an attractive one, and the contents are of value to the student and general practitioner. One advantage of it is that it teaches the physician or the student how to do the little things, or to remedy the minor evils in connection with gynecology. In these days, when major gynecology is so largely practised, minor gynecology is too frequently ignored. To those in the profession who are about to interest themselves particularly in this branch of surgery, and to the student who in the future intends to make gynecology his life-work, we believe that Davenport's book will be essential to his success, because it will teach him facts which larger works sometimes ignore.—*The Therapeutic Gazette*, October 15, 1892.

Many valuable volumes already exist on the surgical aspects of gynecology, but scant attenttion has been paid in recent years to the non-surgical treatment of women's diseases. The present volume, dealing with nothing which has not stood the actual test of experience, and being concisely and clearly written, conveys a great amount of information in a convenient space.—*Annals of Gynæcology and Pædiatry*, June, 1893.

May's Manual of Diseases of Women.—Second Edition.

A Manual of the Diseases of Women. Being a Concise and Systematic exposition of the Theory and Practice of Gynecology. By Charles H. May, M.D., late House Surgeon to Mount Sinai Hospital, New York. Second edition, edited by L. S. Rau, M.D., Attending Gynecologist at the Harlem Hospital, New York. In one 12mo. volume of 360 pages, with 31 illustrations. Cloth, $1.75.

The classification is so clear that the purpose of enabling the student to review the subject, or the practitioner rapidly to refresh his memory, is admirably fulfilled. Taking as authority some of the best systematic writers, and giving in the main an opinion which is a consensus, there is an absence of personal bias which is not the least valuable point in the work. The book meets its purpose. Whole chapters have been written in other works without expressing more ideas than do pages in this.—*American Journal of the Medical Sciences*, August, 1890.

Duncan on Diseases of Women.

Clinical Lectures on the Diseases of Women; Delivered in St. Bartholomew's Hospital. By J. Matthews Duncan, M.D., LL.D., F.R.S.E., etc. In one octavo volume of 175 pages. Cloth, $1.50.

ASHWELL'S PRACTICAL TREATISE ON THE DISEASES PECULIAR TO WOMEN. Third American from the third and revised London edition. In one octavo volume of 520 pages. Cloth, $3.50.

Parvin's Art and Science of Obstetrics.—Second Edition.

The Science and Art of Obstetrics. By THEOPHILUS PARVIN, M.D., LL.D., Professor of Obstetrics and the Diseases of Women and Children in Jefferson Medical College, Philadelphia. Second edition. In one handsome octavo volume of 701 pages, with 239 engravings and a colored plate. Cloth, $4.25; leather, $5.25.

Through his many able contributions to obstetric literature and by reason of his eminence and popularity as a teacher and practitioner, the author of this volume is well known to the profession of America and obstetricians everywhere. Among his many great efforts this work is his master-piece. He has handled this subject, upon which so much has been written, with an attractiveness that is far from common. The science and art of obstetrics have been well and fully demonstrated. The more difficult and abstruse branches have been accorded deserved attention, while the minutiæ, the very little points so important to the practitioner at the bedside, yet so generally ignored by writers, have not been neglected. A number of new cuts have been inserted, and the treatment of every subject is in a manner so clear, so direct, so complete, that little is left to be told and nothing could be told better. The work is therefore, in our estimation, one of the most valuable and trustworthy to which the obstetrician can appeal.—*Pacific Medical Journal*, November, 1890.

The second edition of this work, following so soon after its first publication, demonstrates its real value and the favor bestowed upon it by the profession. We regard it as the most valuable text-book for the student of medicine yet published. The author has been a most successful teacher for a long period, and the discipline and training of the lecture room are observed in the clearness with which the often-obscure principles of the science and art of obstetrics are presented to the comprehension of the undergraduate. We think this feature is one of the strongest in the work and commends it especially to teachers. The present edition is greatly improved and embodies all the advances made in this important department of medicine up to the time of its publication.—*Buffalo Medical and Surgical Journal*, December, 1890.

Playfair's Midwifery.—Seventh Edition.

A Treatise on the Science and Practice of Midwifery. By W. S. PLAYFAIR, M.D., F.R.C.P., Professor of Obstetric Medicine in King's College, London. Fifth American from the seventh English edition. Edited, with additions, by ROBERT P. HARRIS, M.D. In one octavo volume of 664 pages, with 207 engravings and 5 plates. Cloth, $4.00; leather, $5.00.

Truly a wonderful book; an epitome of all obstetrical knowledge, full, clear and concise. In thirteen years it has reached seven editions. It is perhaps the most popular work of its kind ever presented to the profession. Beginning with the anatomy and physiology of the organs concerned, nothing is left unwritten that the practical accoucheur should know. It seems that every conceivable physiological or pathological condition, from the moment of conception to the time of complete involution, has had the author's patient attention. The plates and illustrations, carefully studied, will teach the science of midwifery. The reader of this book will have before him the very latest and best of obstetric practice, and also of all the coincident troubles connected therewith.—*Southern Practitioner*, December, 1889.

This work holds a leading place in all medical college catalogues as a standard text-book.—*Columbus Medical Journal*, November, 1889.

King's Manual of Obstetrics.—Fifth Edition.

A Manual of Obstetrics. By A. F. A. KING, M.D., Professor of Obstetrics and Diseases of Women in the Medical Department of the Columbian University, Washington, D.C., and in the University of Vermont, etc. New (fifth) edition. In one 12mo. volume of 446 pages, with 150 illustrations. Cloth, $2.50.

So comprehensive a treatise could not be brought within the limits of a book of this size were not two things especially true. First, Dr. King is a teacher of many years' experience, and knows just how to present his subjects in a manner for them to be best received; and, secondly, he can put his ideas in a clear and concise form. In other words, he knows how to use the English language. He gives us the plain truth, free from unnecessary ornamentation. Therefore he says there are nine hundred pages of matter between the covers of this manual of four hundred and fifty pages. We cannot imagine a better manual for the hard-worked student, while its clear and practical teachings make it invaluable to the busy practitioner. The illustrations add much to the subject matter.—*The National Medical Review*, October, 1892.

This deservedly popular manual has rapidly passed through five editions since its first appearance ten years ago. It is essentially a book for students' use, and is one of the very best of its kind. Its scope in topics is particularly wide, and, though each topic is necessarily treated in a brief manner, it forms an excellent index, so to say, to the complete study of obstetrics. The present edition bears marks of revision, several illustrations having been added and the text amplified.—*The Chicago Medical Recorder*, October, 1892.

Barnes' System of Obstetric Medicine and Surgery.

A System of Obstetric Medicine and Surgery, Theoretical and Clinical. For the Student and the Practitioner. By ROBERT BARNES, M.D., Physician to the General Lying-in Hospital, London, and FANCOURT BARNES, M.D., Obstetric Physician to St. Thomas' Hospital, London. The Section on Embryology by Professor Milnes Marshall. In one octavo volume of 872 pages with 231 illustrations. Cloth, $5.00; leather, $6.00.

The immediate purpose of the work is to furnish a handbook of obstetric medicine and surgery for the use of the student and practitioner. It is not an exaggeration to say of the book that it is the best treatise in the English language yet published, and this will not be a surprise to those who are acquainted with the work of the elder Barnes. Every practitioner who desires to have the best obstetrical opinions of the time in a readily accessible and condensed form, ought to own a copy of the book.—*Journal of the American Medical Association*, June 12, 1886.

The authors have made a text-book which is in every way quite worthy to take a place beside the best treatises of the period.—*New York Medical Journal*, July 2, 1887.

Obstetrics.

Cloth, $1.00. See *Students' Quiz Series*, page 30.

Landis on Labor and the Lying-in Period.

The Management of Labor, and of the Lying-in Period. By HENRY G. LANDIS, A.M., M.D., Professor of Obstetrics and the Diseases of Women in Starling Medical College, Columbus, Ohio. In one handsome 12mo. volume of 334 pages, with 28 illustrations. Cloth, $1.75.

WINCKEL'S COMPLETE TREATISE ON THE PATHOLOGY AND TREATMENT OF CHILDBED. For Students and Practitioners. Translated from the second German edition, by J. R. CHADWICK, M.D. In one octavo volume of 484 pages. Cloth, $4.00.

Smith on Diseases of Children.—Seventh Edition.

A Treatise on the Diseases of Infancy and Childhood. By J. Lewis Smith, M.D., Clinical Professor of Diseases of Children in the Bellevue Hospital Medical College, New York. Seventh edition, thoroughly revised and rewritten. In one handsome octavo volume of 881 pages, with 51 illustrations. Cloth, $4.50; leather, $5.50.

We have always considered Dr. Smith's book as one of the very best on the subject. It has always been practical—a field book, theoretical where theory has been deduced from practical experience. He takes his theory from the bedside and the pathological laboratory. The very practical character of this book has always appealed to us. It is characteristic of Dr. Smith in all his writings to collect whatever recommendations are found in medical literature, and his search has been wide. One seldom fails to find here a practical suggestion after search in other works has been in vain. In the seventh edition we note a variety of changes in accordance with the progress of the times. It still stands foremost as *the* American text-book. Its advice is always conservative and thorough, and the evidence of research has long since placed its author in the front rank of medical teachers.—*The American Journal of the Medical Sciences*, December, 1891.

In the present edition we notice that many of the chapters have been entirely rewritten. Full notice is taken of all the recent advances that have been made. Many diseases not previously treated of have received special chapters. The work is a very practical one. Especial care has been taken that the directions for treatment shall be particular and full. In no other work are such careful instructions given in the details of infant hygiene and the artificial feeding of infants.—*Montreal Medical Journal*, February, 1891.

Already in previous editions the treatise of Dr. Smith on Diseases of Children held position undisputed at the head of its class. No book in any language could dispute with it the title to preëminence. A list of works on diseases of children, made up in any country, would have this work at its head, and for the purposes of the great majority of practitioners the list would be complete with this one alone.—*The American Practitioner and News*, May 9, 1891.

As a text-book for students and a guide for young practitioners it is unsurpassed.—*Buffalo Medical and Surgical Journal*, January, 1891.

Diseases of Children. Cloth, $1.00. See *Students' Quiz Series*, page 30.

Herman's First Lines in Midwifery.

First Lines in Midwifery: a Guide to Attendance on Natural Labor for Medical Students and Midwives. By G. Ernest Herman, M.B., F.R.C.P., Obstetric Physician to the London Hospital. In one 12mo. volume of 198 pages, with 80 illustrations. Cloth, $1.25. See *Students' Series of Manuals*, page 30.

This little book is intended for the use of midwives and for the guidance of medical students in the care of normal cases. The author is the well-known lecturer on obstetrics to the London Hospital, and he has produced a manual which will prove extremely useful to those for whom it has been prepared. The book is replete with practical advice, and no student can go wrong who follows its teachings. Much stress has been laid on the now generally approved aseptic management of labor; and it is clearly pointed out in what complications the student should send for assistance. The book is well made and fully illustrated.—*The Boston Medical and Surgical Journal*, February 9, 1893.

Owen on Surgical Diseases of Children.

Surgical Diseases of Children. By Edmund Owen, M.B., F.R.C.S., Surgeon to the Children's Hospital, Great Ormond Street, London. In one 12mo. volume of 525 pages, with 4 chromo-lithographic plates and 85 woodcuts. Cloth, $2.00. See *Series of Clinical Manuals*, page 30.

It would not be easy on any subject to find a more clearly written work, where every word and sentence tells, and from which it seems few could be spared. The work is truly a conspectus of the branch of which it treats, and covers the field in a way that is done by no other, presenting the gist of what is known of every surgical affection to which childhood and infancy are liable.—*The American Practitioner and News*, November 13, 1886.

Hartshorne's Conspectus of the Medical Sciences.

A Conspectus of the Medical Sciences; Containing Handbooks on Anatomy, Physiology, Chemistry, Materia Medica, Practice of Medicine, Surgery and Obstetrics. By Henry Hartshorne, A.M., M.D., LL.D., lately Professor of Hygiene in the University of Pennsylvania. Second edition, thoroughly revised and greatly improved. In one large royal 12mo. volume of 1028 pages, with 477 illustrations. Cloth, $4.25; leather, $5.00.

Ludlow's Manual of Examinations.

A Manual of Examinations upon Anatomy, Physiology, Surgery, Practice of Medicine, Obstetrics, Materia Medica, Chemistry, Pharmacy and Therapeutics. To which is added a Medical Formulary. By J. L. Ludlow, M.D., Consulting Physician to the Philadelphia Hospital, etc. Third edition, thoroughly revised, and greatly enlarged. In one 12mo. volume of 816 pages, with 370 illustrations. Cloth, $3.25; leather, $3.75.

CONDIE'S PRACTICAL TREATISE ON THE DISEASES OF CHILDREN. Sixth edition, revised and augmented. In one octavo volume of 779 pages. Cloth, $5.25; leather, $6.25.

LEISHMAN'S SYSTEM OF MIDWIFERY, INCLUDING THE DISEASES OF PREGNANCY AND THE PUERPERAL STATE. Fourth edition. Octavo.

WEST ON SOME DISORDERS OF THE NERVOUS SYSTEM IN CHILDHOOD. In one small 12mo. volume of 127 pages. Cloth, $1.00.

PARRY ON EXTRA-UTERINE PREGNANCY: Its Clinical History, Diagnosis, Prognosis and Treatment. Octavo, 272 pages. Cloth, $2.50.

RAMSBOTHAM'S PRINCIPLES AND PRACTICE OF OBSTETRIC MEDICINE AND SURGERY. In Reference to the Process of Parturition. A new and enlarged edition, thoroughly revised by the author. With additions by W. V. Keating, M.D., Professor of Obstetrics, etc., in the Jefferson Medical College of Philadelphia. In one large and handsome imperial octavo volume of 640 pages, with 64 full-page plates and 43 woodcuts in the text, containing in all nearly 200 beautiful figures. Strongly bound in leather, with raised bands, $7.

CHURCHILL ON THE PUERPERAL FEVER AND OTHER DISEASES PECULIAR TO WOMEN. In one octavo volume of 464 pages. Cloth, $2.50.

TANNER ON PREGNANCY. Octavo, 490 pages, colored plates, 16 cuts. Cloth, $4.25.

The Students' Quiz Series.

A NEW Series of Manuals, comprising all departments of medical science and practice, and prepared to meet the needs of students and practitioners. Written by prominent medical teachers and specialists in New York, these volumes may be trusted as authoritative and abreast of the day. They enjoy the unique advantage of issue under careful editorial supervision which gives assurance, not only of accuracy, but of the completeness of the Series as a whole, and of the compactness of each volume by the avoidance of duplication. Cast in the form of suggestive questions, and concise and clear answers, the text will impress vividly upon the reader's memory the salient points of his subject, and the prominent and uniform headings will facilitate instant reference to any topic. To the student these volumes will be of the utmost service in preparing for examinations, and they will also be of great use to the practitioner in recalling forgotten details, and in gaining the latest knowledge, whether in theory or in the actual treatment of disease. Nothing has been left undone to make them in type and illustration most attractive and convenient for the eye and mind. Handsomely bound in limp cloth, and in size suitable for the hand and pocket, these volumes are assured of enormous popularity, and are accordingly placed at an exceedingly low price in comparison with their value. For details of subjects and prices see below.

ANATOMY (*Double Number*)—By FRED J. BROCKWAY, M.D., Assistant Demonstrator of Anatomy, College of Physicians and Surgeons, New York, and A. O'MALLEY, M.D., Instructor in Surgery, New York Polyclinic. $1.75.

PHYSIOLOGY—By F. A. MANNING, M.D., Attending Surgeon, Manhattan Hospital, N. Y. $1.

CHEMISTRY AND PHYSICS—By JOSEPH STRUTHERS, Ph. B., Columbia College School of Mines, N.Y., and D. W. WARD, Ph. B., Columbia College School of Mines, N. Y., and CHARLES H. WILLMARTH, M.S., N. Y. $1.

HISTOLOGY, PATHOLOGY AND BACTERIOLOGY—By BENNETT S. BEACH, M.D., Lecturer on Histology, Pathology and Bacteriology, New York Polyclinic. $1.

MATERIA MEDICA AND THERAPEUTICS—By L. F. WARNER, M.D., Attending Physician, St. Bartholomew's Dispensary, N.Y. $1.

PRACTICE OF MEDICINE, INCLUDING NERVOUS DISEASES—By EDWIN T. DOUBLEDAY, M.D., Member N. Y. Pathological Society, and J. D. NAGEL, M.D., Member N. Y. County Medical Association. $1.

SURGERY (*Double Number*)—By BERN B. GALLAUDET, M.D., Visiting Surgeon, Bellevue Hospital, New York, and CHARLES DIXON JONES, M.D., Surgeon Yorkville Dispensary, New York. $1.75.

GENITO-URINARY AND VENEREAL DISEASES—By CHARLES H. CHETWOOD, M.D., Visiting Surgeon, Demilt Dispensary, Department of Surgery and Genito-Urinary Diseases, New York. $1.

DISEASES OF THE SKIN—By CHARLES C. RANSOM, M.D., Assistant Dermatologist, Vanderbilt Clinic, New York. $1.

DISEASES OF THE EYE, EAR, THROAT AND NOSE—By FRANK E. MILLER, M.D., Throat Surgeon, Vanderbilt Clinic, New York, and JAMES P. McEVOY, M.D., Throat Surgeon, Bellevue Hospital, Out-Patient Department, New York, and J. E. WEEKS, M.D., Lecturer on Ophthalmology and Otology, Bellevue Hospital Medical College. New York. $1.

OBSTETRICS—By CHARLES W. HAYT, M.D., House Physician, Nursery and Child's Hospital, New York. $1.

GYNECOLOGY—By G. W. BRATENAHL, M.D., Assistant in Gynecology, Vanderbilt Clinic, New York, and SINCLAIR TOUSEY, M.D., Assistant Surgeon, Out-Patient Department, Roosevelt Hospital, New York. $1.

DISEASES OF CHILDREN—By C. A. RHODES, M.D., Instructor in Diseases of Children, New York Post-Graduate Medical College. $1.

For special circulars, with full information and specimen pages, address the Publishers.

The *Student's Quiz Series* enables a man in practice to give himself an occasional quiz and see how much he has forgotten. It is intended, however, more particularly for the use of the student, not only to show how much he has yet to learn, but to make its accomplishment easier; to enable him to give his whole attention to lectures on these subjects without note-taking, and to go over in a condensed form, before an examination or quiz, the essential facts pertaining to the special branch.—*Medical Record*, June 3, 1893.

This series of *Quiz-Compends* is undoubtedly the best that is published. They will repay the practitioner as well as the student for the time spent in a careful study of them, while to the lecturer or author they will very materially lessen his labors by presenting to him his subject in a brief and classified manner.—*Cincinnati Med. Jour.*, May 15, 1893.

Those who desire to review the salient points of medicine can do so by means of these books in the shortest possible time. The form of question and answer crystallizes the information they contain.—*Brooklyn Med. Jour*, April, 1893.

Such books serve a useful purpose, not only to the student preparing for examination but to the practitioner, in recalling the more salient characteristics of the affections under consideration.—*Journal of Cutaneous and Genito-Urinary Diseases*, February, 1893.

We know of no series that we would recommend more highly.—*Memphis Medical Monthly*, Feb. 1893.

Student's Series of Manuals.

A Series of Fifteen Manuals, for the use of Students and Practitioners of Medicine and Surgery, written by eminent Teachers or Examiners, and issued in pocket-size 12mo volumes of 300-540 pages, richly illustrated and at a low price. The following volumes are now ready: LUFF'S *Manual of Chemistry*, $2.; HERMAN'S *First Lines in Midwifery*, $1.25; TREVES' *Manual of Surgery*, by various writers, in three volumes, per set, $6; BELL'S *Comparative Anatomy and Physiology*, $2; GOULD'S *Surgical Diagnosis*, $2; ROBERTSON'S *Physiological Physics*, $2; BRUCE'S *Materia Medica and Therapeutics* (fifth edition), $1.50; POWER'S *Human Physiology* (second edition), $1.50; CLARKE and LOCKWOOD'S *Dissector's Manual*, $1.50; RALFE'S *Clinical Chemistry*, $1.50; TREVES' *Surgical Applied Anatomy*, $2; PEPPER'S *Surgical Pathology*, $2; and KLEIN'S *Elements of Histology* (fourth edition), $1.75. The following is in press: PEPPER'S *Forensic Medicine*.
For separate notices see index on last page.

Series of Clinical Manuals.

In arranging for this Series it has been the design of the publishers to provide the profession with a collection of authoritative monographs on important clinical subjects in a cheap and portable form. The volumes contain about 550 pages and are freely illustrated by chromo-lithographs and woodcuts. The following volumes are now ready: YEO on *Food in Health and Disease*, $2; BROADBENT on the *Pulse*, $1.75; CARTER & FROST'S *Ophthalmic Surgery*, $2.25; HUTCHINSON on *Syphilis*, $2.25; MARSH on the *Joints*, $2; OWEN on *Surgical Diseases of Children*, $2; MORRIS on *Surgical Diseases of the Kidney*, $2.25; PICK on *Fractures and Dislocations*, $2; BUTLIN on the *Tongue*, $3.50; TREVES on *Intestinal Obstruction*, $2; and SAVAGE on *Insanity and Allied Neuroses*, $2. The following is in preparation: LUCAS on *Diseases of the Urethra*.
For separate notices see index on last page.

Lea Brothers & Co., Publishers, 706, 708 & 710 Sansom Street, Philadelphia.

Taylor's Medical Jurisprudence.—New Edition. Just Ready.

A Manual of Medical Jurisprudence. By ALFRED S. TAYLOR, M.D., Lecturer on Medical Jurisprudence and Chemistry in Guy's Hospital, London. New American from the twelfth English edition. Thoroughly revised by CLARK BELL, Esq., of the New York Bar. In one octavo volume of 787 pages, with 56 illustrations. Cloth, $4.50; leather, $5.50.

This is a complete revision of all former American and English editions of this standard book. This edition contains a large amount of entirely new matter, many portions of the book having been rewritten by the editor. Many cases and authorities have been cited, and the citations brought down to the latest date. The book has so long been a standard treatise on the subject of medical jurisprudence, and has gone through so many editions—twelve English and eleven American—that there is little left to criticise, unless it is to note the admirable manner in which Mr. Clark Bell, in editing this edition, has enlarged and improved what already seemed complete, by bringing his many citations of cases down to date to meet the present law; and by adding much new matter he has furnished the medical profession and the bar with a valuable book of reference, one to be relied upon in daily practice, and quite up to the present needs, owing to its exhaustive character. It would seem that the book is indispensable to the library of both physician and lawyer, and particularly the legal practitioner whose duties take him into the criminal courts. Too much praise cannot be given to the editor for his thorough and painstaking labors, by which he has given to two professions a reference-book to be relied upon.—*The American Journal of the Medical Sciences*, April, 1893.

No library is complete without Taylor's *Medical Jurisprudence*, as its authority is accepted and unquestioned by the courts.—*Buffalo Medical and Surgical Journal*, June, 1893.

There is no other work upon the subject which has been so uniformly recognized or so widely quoted and followed by courts in England and this country. It would have been impossible to select anyone in this country better fitted for the task of revision than Mr. Bell. Profiting by the labors with which Dr. Stevenson has enriched the twelfth English edition, he has, in this eleventh American edition, given us a book fully abreast with the most recent thought and knowledge. On the basis of his own researches, of the investigations of scientists throughout the world, and of the decisions of our own courts, he has incorporated in it a wealth of practical suggestion and instructive illustration which cannot fail to strengthen the hold it has so long had upon the profession.—*The Criminal Law Magazine and Reporter*, January, 1893.

BY THE SAME AUTHOR.

Poisons in Relation to Medical Jurisprudence and Medicine. Third American, from the third and revised English edition. In one large octavo volume of 788 pages. Cloth, $5.50; leather, $6.50.

Lea's Superstition and Force.—New Edition. Just Ready.

Superstition and Force: Essays on the Wager of Law, The Wager of Battle, The Ordeal and Torture. By HENRY CHARLES LEA, LL.D. New (fourth) edition, revised and enlarged. Royal 12mo., 629 pages. Cloth, $2.75.

Both abroad and at home the work has been accepted as a standard authority, and the author has endeavored, by a complete revision and considerable additions, to render it more worthy of the universal favor which has carried it to a fourth edition. The style is severe and simple, and yet delights with its elegance and reserved strength. The known erudition and fidelity of the author are guarantees that all possible original sources of information have been not only consulted but exhausted. The subject matter is handled in such an able and philosophic manner that to read and study it is a step toward liberal education. It is a comfort to read a book that is so thorough, well conceived and well done. We should like to see it made a text-book in our law schools and prescribed course for admission to the bar.—*Legal Intelligencer*, March 3, 1893.

BY THE SAME AUTHOR.

Chapters from the Religious History of Spain. In one 12mo. volume of 522 pages. Cloth, $2.50.

The width, depth and thoroughness of research which have earned Dr. Lea a high European place as the ablest historian the Inquisition has yet found are here applied to some side-issues of that great subject. We have only to say of this volume that it worthily complements the author's earlier studies in ecclesiastical history. His extensive and minute learning, much of it from inedited manuscripts in Mexico, appears on every page.—*London Antiquary*, January, 1891.

The Formulary of the Papal Penitentiary. In one octavo volume of 221 pages, with a frontispiece. Cloth, $2.50. *Just ready.*

The text is edited with the care and learning which we should have expected of the historian of the "Inquisition of the Middle Ages," and is illustrated with valuable notes and an introduction of remarkable interest. If his judgment of the whole system is a hard one it is to be remembered that he is here in accord with a succession of the greatest religious teachers of the medieval church.—*English Historical Review*, July, 1893.

Studies in Church History. The Rise of the Temporal Power—Benefit of Clergy—Excommunication—The Early Church and Slavery. Second and revised edition. In one royal octavo volume of 605 pages. Cloth, $2.50.

The author is preëminently a scholar; he takes up every topic allied with the leading theme and traces it out to the minutest detail with a wealth of knowledge and impartiality of treatment that compel admiration. The amount of information compressed into the book is extraordinary, and the profuse citation of authorities and references makes the work particularly valuable to the student who desires an exhaustive review from original sources. In no other single volume is the development of the primitive church traced with so much clearness and with so definite a perception of complex or conflicting forces.—*Boston Traveller.*

An Historical Sketch of Sacerdotal Celibacy in the Christian Church. Second edition, enlarged. In one octavo volume of 685 pages. Cloth, $4.50.

This subject has recently been treated with very great learning and with admirable impartiality by an American author, Mr. Henry C. Lea, in his *History of Sacerdotal Celibacy*, which is certainly one of the most valuable works that America has produced. Since the great history of Dean Milman, I know no work in English which has thrown more light on the moral condition of the Middle Ages, and none which is more fitted to dispel the gross illusions concerning that period which positive writers and writers of a certain ecclesiastical school have conspired to sustain.—*Lecky's History of European Morals*, Chapter V.
